Note:

1. A potable water system shall be designed, constructed and installed to conform to good engineering practice appropriate to the circumstances, such as that described in the ASHRAE Handbooks and ASPE Data Books.
2. No water system between the point of connection with the water service pipe or the water meter and the first branch that supplies a water heater that serves more than one fixture shall be less than ¾" in size.
3. The minimum water pressure at the entry to the buildings is 200 kPa, and the total maximum length of the water system is 90m.
4. In a hot water distribution system of a developed length of more than 30m from the HWT to the farthest fixture or supplying more than 4 stories', the water temperature shall be maintained by, (a) recirculation, or (b) a self-regulating heat tracing system.
5. Where piping may be exposed to freezing conditions, it shall be protected from the effects of freezing.
6. If the existing water service is ½" or 5/8" in size it will be required to be replaced and upgraded in size to match the requirement of this data sheet.
7. The water pipe after the water meter shall be 1" in size and shall run to the branches for the hot water tank and for the water supply to each dwelling unit. (For 2 or 3 dwelling unit house)
8. Where both hot and cold water is supplied to fixtures in a house containing only one dwelling unit, the water service pipe is permitted to be a minimum ¾" in size provided the total hydraulic load is not more than 26.4 fixture units.
