1.0 Introduction

1.1 Project Description

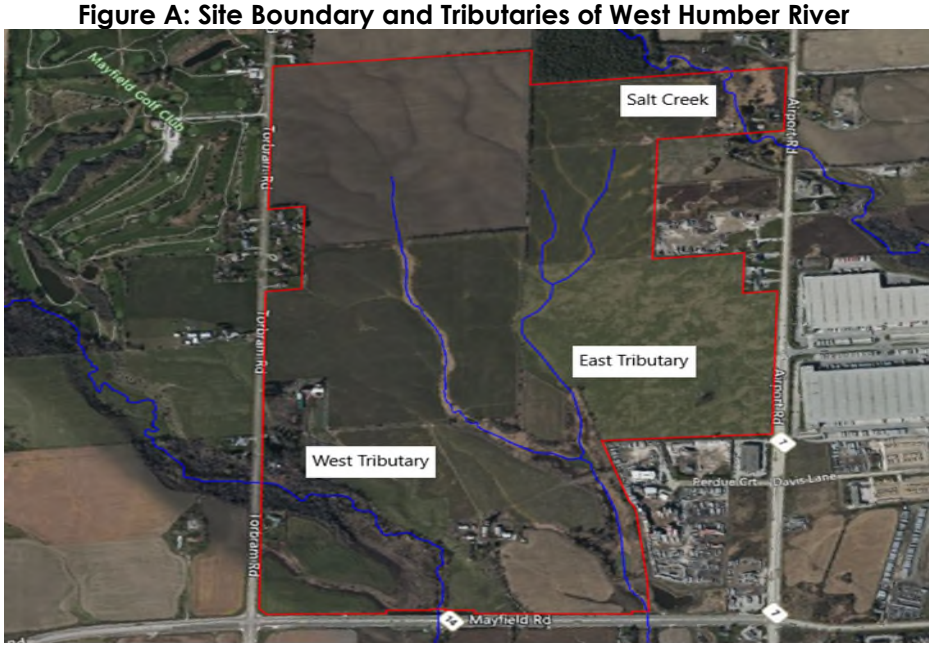

C.F. Crozier & Associates Inc. (Crozier) was retained by Rice Group to complete a Hydraulic Analysis Report supporting a Plan of Subdivision Application for the property known as Tullamore Lands in the Town of Caledon. The purpose of this report is to document the methodology of the floodplain analysis for the east tributary of Campbell's Creek and Salt Creek.

1.2 Background

The Site is primarily a greenfield area covering approximately 202.9 ha and is currently zoned as industrial per the MZO. The Site is bounded by Mayfield Road (Regional Road 14) to the south, Airport Road (Regional Road 7) to the east, greenfield lands to the north, and Torbram Road to the west.

The Site consists of primarily agricultural land and contains a Greenbelt area as well as two tributaries of the West Humber River. The Greenbelt area of the Site is located northeast of the Torbram Road and Mayfield Road intersection and a tributary of the West Humber River (Salt Creek) is conveyed through this Greenbelt area. A second tributary of the West Humber River passes through the middle of the Site in two locations. Both tributaries convey drainage southwards through existing culverts under Mayfield Road and are tributaries of Campbell's Creek, making the site part of the TRCA Regulated Area of the West Humber River Watershed. The larger tributary is in the southwest corner of the property and, for the purposes of this Report, will be referred to as the west tributary. The second water course is a smaller tributary, which flows through the middle of Site and will be referred to as the east tributary.

Figure A: Site Boundary and Tributaries of West Humber River

As shown on the Draft Landscape Setting Figure 1 (GEI Consultants dated November 2021) attached, the area surrounding the west tributary is identified as greenbelt. No development is proposed within this area.

The preservation of this area will ensure that the flow conveyance in this area will be maintained. For this report, only the hydraulic function of the channel corridor and proposed crossings is being analyzed.

Similarly, the area surrounding Salt Creek in the northeast corner of the site is identified as greenbelt. Drainage to this watercourse will be maintained in post-development, so no hydraulic analysis is required.

2.0 Background Information

2.1 Topographic Survey

A Topographic Survey of the site was completed by Young & Young Surveying Inc. in October 2021 and has been included in Appendix A of this report. Additional contour information was obtained through the Ontario Classified Point Cloud Data (accessed via Equator Software on April 8, 2021).

2.2 Hydraulic Model

Based on correspondence with the TRCA, it has been confirmed that the west tributary has an engineered floodplain model which is accepted by TRCA, so further analysis of the west tributary is not required. TRCA has an estimated floodplain model prepared for the east tributary and not an engineered floodplain model. Figure B shows the floodplain for the engineered west tributary and the estimated east tributary.

Figure B: Floodplain Mapping from TRCA (received April 6, 2021)

TRCA indicated that the information provided in the estimated model is the best available but is not appropriate for land development approvals. TRCA specified that the estimated model does not include crossing structures, refined Manning's n values or detailed crossing geometry. As a result, TRCA staff advised that the available modeling and mapping be used to conduct the hydraulic analysis for the project, with the appropriate refinements, to create an engineered HEC-RAS model. Therefore, additional analysis of the east tributary must be undertaken and refinements to the estimated model shall be made to create an engineered HEC-RAS model. TRCA provided both the estimated and engineered HEC-RAS models of the three tributaries.

3.0 Methodology

3.1 Modified Existing Conditions Hydraulic Model

The following steps were undertaken to create the engineered HEC-RAS model used to represent the modified existing conditions for this analysis:

- Review of the Final West Humber River engineered hydraulic (HEC-RAS) model, prepared by Cole Engineering in May 2019, provided by the TRCA. This model includes Salt Creek, the west tributary and the downstream sections of the West Humber River.

- Review of the West Humber River estimated hydraulic (HEC-RAS) model, provided by TRCA in May 2021. This model includes the east tributary on the site.

- Tributary drainage areas for the east tributary and Salt Creek were reviewed using both a topographic survey and LiDAR generated topography to validate external upstream drainage areas that are conveyed to the east tributary on site.

- Review of the Humber River Hydrology Update, prepared by Civica Infrastructure (April 2018) and update based on delineation of pre-development and post-development drainage through the Site.

- Updated the hydrological inputs for the HEC-RAS model per the updates to the Humber River Hydrology model.

- The eastern tributary was added to the engineered hydraulic model. This includes the east and west branch of the East Tributary (the estimated model only included the western branch of the eastern tributary), the model geometry was based on the topographic survey and LiDAR generated topography.

- Established existing Regional flood elevations on the site for Salt Creek and the east tributary based on the combined HEC-RAS model with updated hydrology and updated sections based on the recent topographic survey completed for the area.

- Calculate the flood storage provided in the floodplain for the east tributary.

- Analyze the impacts of the proposed development on the conveyance capacity of the culvert under Mayfield Road.

4.0 Hydrology

4.1 Existing Conditions - TRCA Flows

The estimated hydraulic (HEC-RAS) model provided by TRCA included Regional Storm flows for the east tributary (Campbell's Trib A). Table 1 summarizes the TRCA flows within the HEC-RAS model.

Table 1: Pre-Development TRCA Flows

Outlet Location	Regional Flow Rate (m3/s)	HEC-RAS River	HEC-RAS Reach	HEC-RAS Station ID
East Tributary	14.57	Campbell's TribA	Reach 4	1254.43
Old School Rd West Culvert	68.502		Reach 3	812.543

Airport Rd N Culvert	100.162			1011.786

4.2 Modified Existing Conditions

According to the topographic survey (Young & Young Surveying Inc., May 2021), the site generally slopes towards the west and east tributaries, with majority of the stormwater runoff directed towards the east tributary. The east portion of the site gently slopes towards Airport Road, and ultimately towards Salt Creek, while the northeast portion of the Site drains directly to Salt Creek. There is also an area directed towards the neighboring property near the southeast corner of the Site.

In addition to drainage within the property, there is a combined 13.9 ha external area that also drains through the Site. These areas generally flow southwards and are conveyed through the East Tributary on site, apart from a 1.4 ha area which drains through the site towards Airport Road and a 1.9 ha area that drains towards the West Tributary. Pre-development drainage areas have been delineated based on the existing Site topography and are shown on Figure 2.

Under existing conditions, the site is occupied by a cattle farm which has two man-made berms obstructing the east tributary. The two berms have culverts which control the flow of the east tributary to create ponds upstream of the berms. The berms/culverts result in backwater to create the ponds, which impacts the flood elevations on site.

The site also has an existing culvert on the southeast corner of the site that conveys flows from the east tributary. Under pre-development conditions there are five (5) main stormwater outlets for the Site; the West Tributary, the East Tributary, Airport Road (which ultimately drains to Salt Creek), the neighboring property to the southeast and Salt Creek. Most of the flows from the site and all external areas outlet to the east tributary on the property.

To gain a better understanding of the flow contributions to the different branches of the east tributary, primary outlet locations for each catchment were identified and Figure 2 displays the pre-development drainage areas. Majority of the drainage from the Site is directed towards the east tributary. Table 2 summarizes the pre-development drainage catchments.

Table 2: Pre-Development Catchments

Catchment ID	Area (ha)	Runoff Coefficient	Curve Number (CN)[1]	Outlet
101	34.6	0.26	79	West Tributary

1. CN values determined for each catchment based on existing land use and soils on Site. CN values were converted to CN* within VO for the 2-year to 100-year events and converted to CNIII for the Regional model to better represent the available soil moisture storage volume during a storm event.

Based on the review of the Humber River Hydrology Update (Civica, April 2018), the site is located within Humber River Catchment IDs 31.01, 32.27, 32.28, 32.29, 32.22, 35.12 and 35.13. A review of these drainage areas overlain on the site topography indicated that portions of the runoff from the Site do not drain to the catchments identified within the Humber River Hydrology Update. The approved Humber River model (Civica 2018) was trimmed and modified to reflect detailed site drainage conditions. A copy of the updated model is included as an attachment to this report. Modifications to the model mainly included changes to catchment areas, under both pre-development and post-development conditions. Refer to Figures 2, 3A and 3B for more details on the changes made to the Humber River Hydrology Update catchment areas.

Visual OTTHYMO (VO) was used to determine the pre-development peak runoff directed towards the west tributary, east tributary and Salt Creek. The catchment results have been combined based on the primary outlet locations indicated in Table 2 and include flows from the neighbouring property through the SWM pond. The HEC-RAS station IDs where flows were added to represent the primary outlets are included in Table 3 along with the VO flow results. The VO model inputs and results are included as part of Appendix B.

Table 3: Pre-Development Peak Runoff Flows

River	Reach	River Station ID	Flow Rate (m^3/s)						
			2-Year	5-Year	10-Year	25-Year	50-Year	100-Year	Regional

[1] Flow calculated through Transposition of Flows

4.3 Modified Existing Conditions (Update to TRCA Existing Conditions Model)

To accurately model the flood elevations through the subject property, the East Branch of the east tributary was added to the HEC-RAS model (River Campbell's TribA), as previously discussed. The East Branch is comprised of a forked tributary, with the new reaches being represented as Reach 6, Reach 8 & Reach 6-Lower. These new reaches are located upstream of the forked north pond on Site. A total of twenty-four (24) cross-sections were added along the new reaches.

As a result of the new reach, the existing reach was split into two; Reach 5 represents the west branch upstream of the forked pond and Reach 4 represents the remainder of the tributary where both branches merge. The upstream station of Reach 5 within the Site is cross-section 2247.605 and existing cross-section 1345.871 represents the downstream-most section. Section 1316.219 was removed and replaced with an additional section (station 1281.581), which represents the downstream section of the reach. A total of twenty-one (21) cross-sections are included along Reach 5 within the Site. Figures 5A and 5B (following the report) show the location of the cross-sections.

The upstream cross-section of Reach 4 is station 1254.43 and the analysis is carried out to the station downstream of the Mayfield Road crossing at cross-section 638.543. A total of eighteen (18) cross-sections are included along Reach 4 within the Site.

The following changes were made to the provided model:

- Added one cross section upstream of the north berm (stations 1190).
    - Cross-section 1190 was altered slightly to lower the bottom of the channel to the elevation of the culvert invert. The bottom of the channel was at an elevation of 233.97 masl and the upstream invert of the culvert was identified as 233.10 masl.
- Added 1 m diameter culvert at the north berm based on the topographic survey completed by Young & Young (May 2021).
- Removed cross-sections 1191.774 and 1158.102 from the model as they are located directly on the north berm.
- Added two cross sections downstream of the north berm (stations 1132 and 1125).
- Added four (4) additional sections between the two berms on Site.
- Added two cross sections upstream of the south berm (stations 861 and 846).
    - Cross-section 846 was altered slightly to lower the bottom of the channel to the elevation of the culvert invert. The bottom of the channel was at an elevation of 229.274 masl and the upstream invert of the culvert was identified as 228.26 masl.
- Added 600 mm diameter culvert at the south berm based on the topographic survey completed by Young & Young (May 2021).
- Removed cross-sections 821.4014 and 822.8878 from the model as they are located directly on the south berm.
- Added two cross sections downstream of the south berm (stations 790 and 763).

    - Cross-section 790 was altered slightly to lower the bottom of the channel to the elevation of the culvert invert. The bottom of the channel was at an elevation of 228.964 masl and the upstream invert of the culvert was identified as 228.57 masl.

- Added one (1) additional section between the south berm and Mayfield Road.
- Added two cross sections upstream of the Mayfield Road crossing (stations 727 and 692.338).
- Added 6706 mm by 1829 mm culvert at the Mayfield Road crossing based on the Issued for Tender drawings by IBI Group (March 2017).
- Removed cross-sections 689.3702, 669.7656 and 665.2351 from the model as they are located directly on Mayfield Road.
- Added one cross section downstream of the Mayfield Road crossing (station 638.888).

As requested by TRCA the existing sections within the East Tributary and Salt Creek were updated with a new surface comprising of LiDAR and the topo survey completed for the site by Young & Young (October 2021). A comparison of the TRCA cross-section profiles and the updated sections are attached (Appendix C).

In addition, Manning's n coefficients have been assigned based on existing Site conditions. A Manning's n coefficient of 0.035 was applied for the main channel, while the floodplain was assigned a Manning's n coefficient of 0.045 representing agricultural lands. Note that a Manning's n coefficient of 0.035 was used for the channel and banks of the west and east branches (Reaches 5, 6, 8 and 6-Lower) since these areas do not consist of defined channels.

Details for the culvert at the north and south berms are shown in Table 4. The north berm overtops during the 25-year storm event and all larger storm events (25-Year to regional) while the south berm overtops during all storm events (2-Year to Regional). The east tributary experiences significant backwater effect due to the two berms/culverts, which is discussed in Section 6.3.

Table 4: Existing Conditions - Berm Culvert Dimensions

	Berm 1	**Berm 2**
Type	Circular	Circular
Diameter (m)	1.0	0.6
U/S Invert (masl)	233.1	229.26
D/S Invert (masl)	232.7	228.57
Length (m)	35	35
Slope (%)	1.14%	1.97%

Culvert details for the east tributary crossing at Mayfield Road is outlined in Table 5. The Mayfield Road culvert conveys the Regional and all other storm events and flooding does not overtop Mayfield Road.

Table 5: Existing Mayfield Road Culvert Dimensions

	Existing Culvert
Type	Open Bottom Box Culvert
Size	1,829 mm x 6,706 mm
U/S Invert (masl)	227.80
D/S Invert (masl)	227.35
Length (m)	52.0
Slope (%)	0.87%
Road Low Elevation Point (masl)	230.59

4.4 Modified Existing Conditions Backwater Analysis

To better understand the backwater effects from the two berms on site, an additional HEC-RAS scenario was created to determine the flood elevations without the berms. The man-made berms were constructed downstream of the north and south ponds by the previous owners. Culverts pass through both berms, which controls the flow out of the ponds, and consequently impacts the flood elevation on site. In this scenario, the two berms and associated culverts were removed from the modified existing conditions HEC-RAS model.

The modified existing conditions Regional flood elevations for the east tributary with berms and without berms scenarios are shown in Figure 4A and Figure 4B, respectively. Existing flood elevations for the east tributary are provided in Tables 6, 7 and 8, which were obtained using the VO generated flows. Detailed output from the HEC-RAS model is in Appendix C, as well as the results obtained using the provided TRCA flows.

Table 6: Existing Regional Flood Elevations for Reach 8, Reach 6 and Reach 6-Lower

River Reach	River Station ID	Modified Existing Conditions with Berms (m)	Modified Existing Conditions with Berms Removed (m)

727	Within the Site	229.75	229.75
692.338	U/S of Mayfield Rd	229.28	229.28
638.888	D/S of Mayfield Rd	228.69	228.69
638.543	D/S of the Site	228.37	228.37

The flood elevation results shown in Tables 6, 7 and 8 shows the flood elevations for modified existing conditions with the two berms and culverts removed. The berms/culverts result in backwater effect directly upstream of the two berms. The north berm/culvert causes an upstream backwater approximately 300 m upstream of the north berm. The south berm/culvert causes upstream backwater effect all the way up to the north berm.

As shown in Figure 4B, the flood elevation decreases by as much as 3 m in the area around the north and south ponds when the berms are removed. Removal of the man-made berms decreases the portion of the Site that is within the Regional flooding.

4.5 Creek Crossings and Hydraulic Structures

There are no changes to the existing culvert at Mayfield Road. A summary of the details for the existing east tributary crossing at Mayfield Road is outlined above in Table 9.

Table 9: Existing Mayfield Road Culvert Dimensions

	Existing Culvert
Type	Open Bottom Box Culvert
Size	1,829 mm x 6,706 mm
U/S Invert (masl)	227.80
D/S Invert (masl)	227.35
Length (m)	52.0
Slope (%)	0.87%
Road Low Point Elevation (masl)	230.59
Hydraulic Summary	Culvert conveys the Regional and all other storm events and flooding does not overtop the road.

5.0 Hydraulic Analysis

5.1 Proposed Conditions

In proposed conditions, the reaches of Campbell's TribA upstream of the south berm will be removed and the flood storage will be provided on site in the form of a Regional stormwater management facility. The active storage within the pond will be sized to control the post-development Regional flow to the pre-development Regional peak flow in order to provide conveyance through the Mayfield Road culvert; see the Functional Servicing & Stormwater Management Report completed by Crozier under a separate cover for more details.

Preliminary sizing for the outlet for the dry pond was completed as part of this submission. The outlet structure is proposed in the southeast corner of the dry pond and will consist of two (2) 2,130 mm (W) by 1,200 mm (H) concrete box culverts, which will be installed at an invert of 229.00 m (bottom of dry pond). Flows will then be directed towards the existing Mayfield Road culvert. The outlet control for the dry pond will be detailed further at the detailed design stage.

Visual OTTHYMO (VO) was used to determine the post-development peak runoff directed towards the west tributary, east tributary and Salt Creek. Table 10 provides the post-development flows that were updated in the hydraulic model. The VO model inputs and results are included as part of Appendix B.

Table 10: Post-Development Peak Runoff Flows

[1] Flow calculated through Transposition of Flows

The modified existing and proposed conditions Regional floodlines for Salt Creek are shown in Figure 5. Existing and proposed flood elevations for the east tributary were obtained using the VO generated flows and are provided in Table 11. Detailed output from the HEC-RAS model is in Appendix C, as well as the results obtained using the provided TRCA flows.

Table 11: Salt Creek Existing & Proposed Regional Flood Elevations

5.1.1 Downstream Capacity Analysis

A downstream capacity analysis was completed for the east tributary, downstream of the Mayfield Road culvert to determine the impacts of the regional pond. The existing and proposed controlled flood elevations for Reach 4 of the east tributary are provided in Table 12.

Table 12: Downstream Existing and Proposed Regional Flood Elevations in Reach 4

River Station ID	Modified Existing Conditions (m)	Proposed Conditions (m)	Difference
692.338	229.28	229.22	-0.06

229.0522	224.14	224.11	-0.03
173.0601	223.68	223.65	-0.03
153.1	223.41	223.39	-0.02
137.87	222.93	222.89	-0.04
99.65	222.43	222.41	-0.02
11.71822	221.93	221.91	-0.02

As shown in Table 12, there are no increases in the flood elevations downstream of the site with the addition of the Regional pond.

5.2 Hydraulic Assessment of Crossing Structures

As per Town of Caledon standards, road crossings of major watercourses under collector roads must be designed to convey the 1:50 year event and crossings under arterial roads must be designed to convey the 1:100 year to Regional storm event. For all major events (1:100 year to Regional) transverse water crossings shall have a maximum water depth at the crown of the road of 0.15 m.

The design and hydraulic performance of road crossings is defined by criteria from the MTO Highway Drainage Design Standards (2008). The relevant criteria include design flows, minimum freeboard, allowable overtopping frequency, clearance, and flow depth at culvert inlets. Mayfield Road is designated as an Industrial Connector in the 2013 Peel Road Characterization Study. This is assumed to be a major arterial road. The applicable hydraulic criteria for are summarized as follows.

Design Flow: For freeway and urban arterial roads, the 50-yr design flow is used for sizing all required structures with spans less than or equal to 6.0 m and the 100-yr design flow is used for sizing all required structures with spans exceeding 6.0 m. For rural arterial and collector roads, the 25-yr design flow is used for sizing all required structures with spans less than or equal to 6.0 m and the 50-yr design flow is used for sizing all required structures with spans exceeding 6.0 m. For local roads, the 10-yr design flow is used for sizing all required structures with spans less than or equal to 6.0 m and the 25-yr design flow is used for sizing all required structures with spans exceeding 6.0 m.

Freeboard: The minimum freeboard is measured vertically from the high-water level for the design flow to the edge of the travelled lane. The minimum freeboard at road crossings shall be greater than or equal to 1.0 m for freeways, arterials, and collectors. The minimum freeboard at road crossings shall be greater than or equal to 0.3 m for local roads.

Clearance: The clearance is measured vertically from the high-water level for the design flow to the lowest point on the soffit. The minimum clearance for road crossings at freeways, arterials, and collector roads shall be greater than or equal to 1.0 m. The minimum clearance for road crossings at local roads shall be greater than or equal to 0.3 m. Zero clearance is required for the Regulatory flow.

Overtopping Criteria: There should be no overtopping of the road at any culvert crossing during the 100-yr storm event. If possible, overtopping in the Regional Storm Event should also be avoided.

Depth Criteria: The depth of flow at the culvert during the design storm should not be greater than 1.5 times the culvert height.

As outlined in Table 13, the culvert at Mayfield Road conveys the controlled proposed flows in the east tributary as it did in existing conditions and meets the freeboard criteria, clearance criteria, overtopping criteria, depth of flow criteria, and do not overtop the internal roads during the 100-year or Regional events. Since the 12-hour SCS design storm had a greater flow for the 100-year event, this value was used to evaluate the design criteria in order to be more conservative.

Table 13: Summary of Crossing Details and Hydraulic Considerations for Controlled Flows

Crossing No.		**Existing/Proposed Conditions**
Road Classification (Design Flood Frequency per Town Standards)		Major Arterial (Design Flow = 100Yr)
Approx. Edge of Asphalt Grade (masl)		230.69
100-Yr Event (12hr SCS)	Flow Rate (m^3/s)	5.09
	Headwater Elevation (masl)	228.51
	Freeboard (m)	2.18
	Depth of Flow (m)	0.71
Regional Event	Flow Rate (m^3/s)	22.26
	Headwater Elevation (masl)	229.41
	Freeboard (m)	1.28
	Depth of Flow (m)	1.61
Freeboard (m) **during Design Flow**		2.18
Overtopping (m) **during 100-Yr and/or Regional Event**		Does not overtop during 100-Yr or Regional Event
Clearance (m) **during Design Flow**		1.12
Water Level Source		XS: 670 (Upstream)

As outlined in Table 14, the culvert at Mayfield Road conveys the uncontrolled Regional flows in the east tributary, however it does not convey the uncontrolled 100-year storm event. Though the culvert does not meet the freeboard, clearance, overtopping or depth of flow criteria, safe access is still provided. Since the 12-hour SCS design storm had a greater flow for the 100-year event, this value was used to evaluate the design criteria in order to be more conservative.

Table 14: Summary of Crossing Details and Hydraulic Considerations for Uncontrolled Flows

Crossing No.		**Existing/Proposed Conditions**
Road Classification (Design Flood Frequency per Town Standards)		Major Arterial (Design Flow = 100Yr)
Approx. Edge of Asphalt Grade (masl)		230.69
100-Yr Event (12hr SCS)	Flow Rate (m^3/s)	55.55
	Headwater Elevation (masl)	230.92
	Freeboard (m)	-0.23
	Depth of Flow (m)	3.12
Regional Event	Flow Rate (m^3/s)	33.46
	Headwater Elevation (masl)	229.63
	Freeboard (m)	1.06
	Depth of Flow (m)	1.83
Freeboard (m) **during Design Flow**		-0.23
Overtopping (m) **during 100-Yr and/or Regional Event**		Overtops during 100-Yr event; does not overtop during Regional event
Clearance (m) **during Design Flow**		-1.29
Water Level Source		XS: 670 (Upstream)

6.0 Conclusion

We trust that the information provided for the east tributary hydraulic analysis are in general conformance with the Town of Caledon and TRCA standards and we recommend the approval of the design. The following is noted:

- The existing tributaries on Site are proposed to be removed and the flows directed to a wetland designed with a low-flow channel to provide flood storage.

We trust that this analysis meets the TRCA requirements to support the proposed development and recommend that the design outlined within this report is accepted such that the owner can proceed with the Plan of Subdivision Application for the proposed development.

Respectfully submitted,

C.F. CROZIER & ASSOCIATES INC.

NOT TO BE USED FOR CONSTRUCTION

BEARING NOTE:

BEARINGS ARE UTM GRID, DERIVED FROM GPS OBSERVATION USING THE "TOPNET" GPS NETWORK OBSERVATIONS, UTM ZONE 17, NAD83 (CSRS) (2010.0) & (1997.0).

SURVEY COMPLETED BY YOUNG & YOUNG SURVEYING INC. & J.D.BARNES LIMITED DATED 2021/OCT/07, 2021/OCT/14 & 2018/NOV/28, PROJECT Nos. 21–B7601–4, 21–B7601–5 & 18–30–308–00–4.

EXISTING GROUND CONTOURS OUTSIDE OF SITE LIMITS AND INSIDE EXISTING FLOOD PLAIN BASED ON LIDAR SURVEY FROM EQUATORSTUDIOS.

ELEVATION NOTE:

ELEVATIONS HERON ARE GEODETIC IN ORIGIN AND WERE DERIVED FROM GPS OBSERVATIONS USING THE "TOPNET" GPS NETWORK AND ARE REFERRED TO THE CGD–1928: 1978 DATUM.

ELEVATION HEREON ARE GEODETIC IN ORIGIN AND WERE DERIVED FROM CITY OF BRAMPTON MONUMENT No. 042200365 (NAD ADJUSTMENT) HAVING A PUBLISHED ELEVATION OF 242.135m.

SITE BENCHMARK:

A NAIL HAVING ELEVATION 241.24m WAS SET 12.12m EAST OF THE SOUTHEAST CORNER OF THE PROPERTY ALONG AIRPORT ROAD.

A CUT CROSS HAVING ELEVATION 242.51m WAS SET ON THE NORTHEAST CORNER OF THE INTERSECTION BETWEEN MAYFIELD ROAD AND TORBRAM ROAD

DRAFT PLAN NOTES:

DESIGN ELEMENTS ARE BASED ON DRAFT PLAN BY WESTON CONSULTING INC.
DRAWING No.: 03
FILE No.: 10208

DRAWING NOTES:

THIS DRAWING IS THE EXCLUSIVE PROPERTY OF C.F. CROZIER & ASSOCIATES INC. AND THE REPRODUCTION OF ANY PART OF IT WITHOUT PRIOR WRITTEN CONSENT OF THIS OFFICE IS STRICTLY PROHIBITED.

THE CONTRACTOR SHALL VERIFY ALL DIMENSIONS, LEVELS, AND DATUMS ON SITE AND REPORT ANY DISCREPANCIES OR OMISSIONS TO THIS OFFICE PRIOR TO CONSTRUCTION.

THIS DRAWING IS TO BE READ AND UNDERSTOOD IN CONJUNCTION WITH ALL OTHER PLANS AND DOCUMENTS APPLICABLE TO THIS PROJECT. DO NOT SCALE THIS DRAWING.

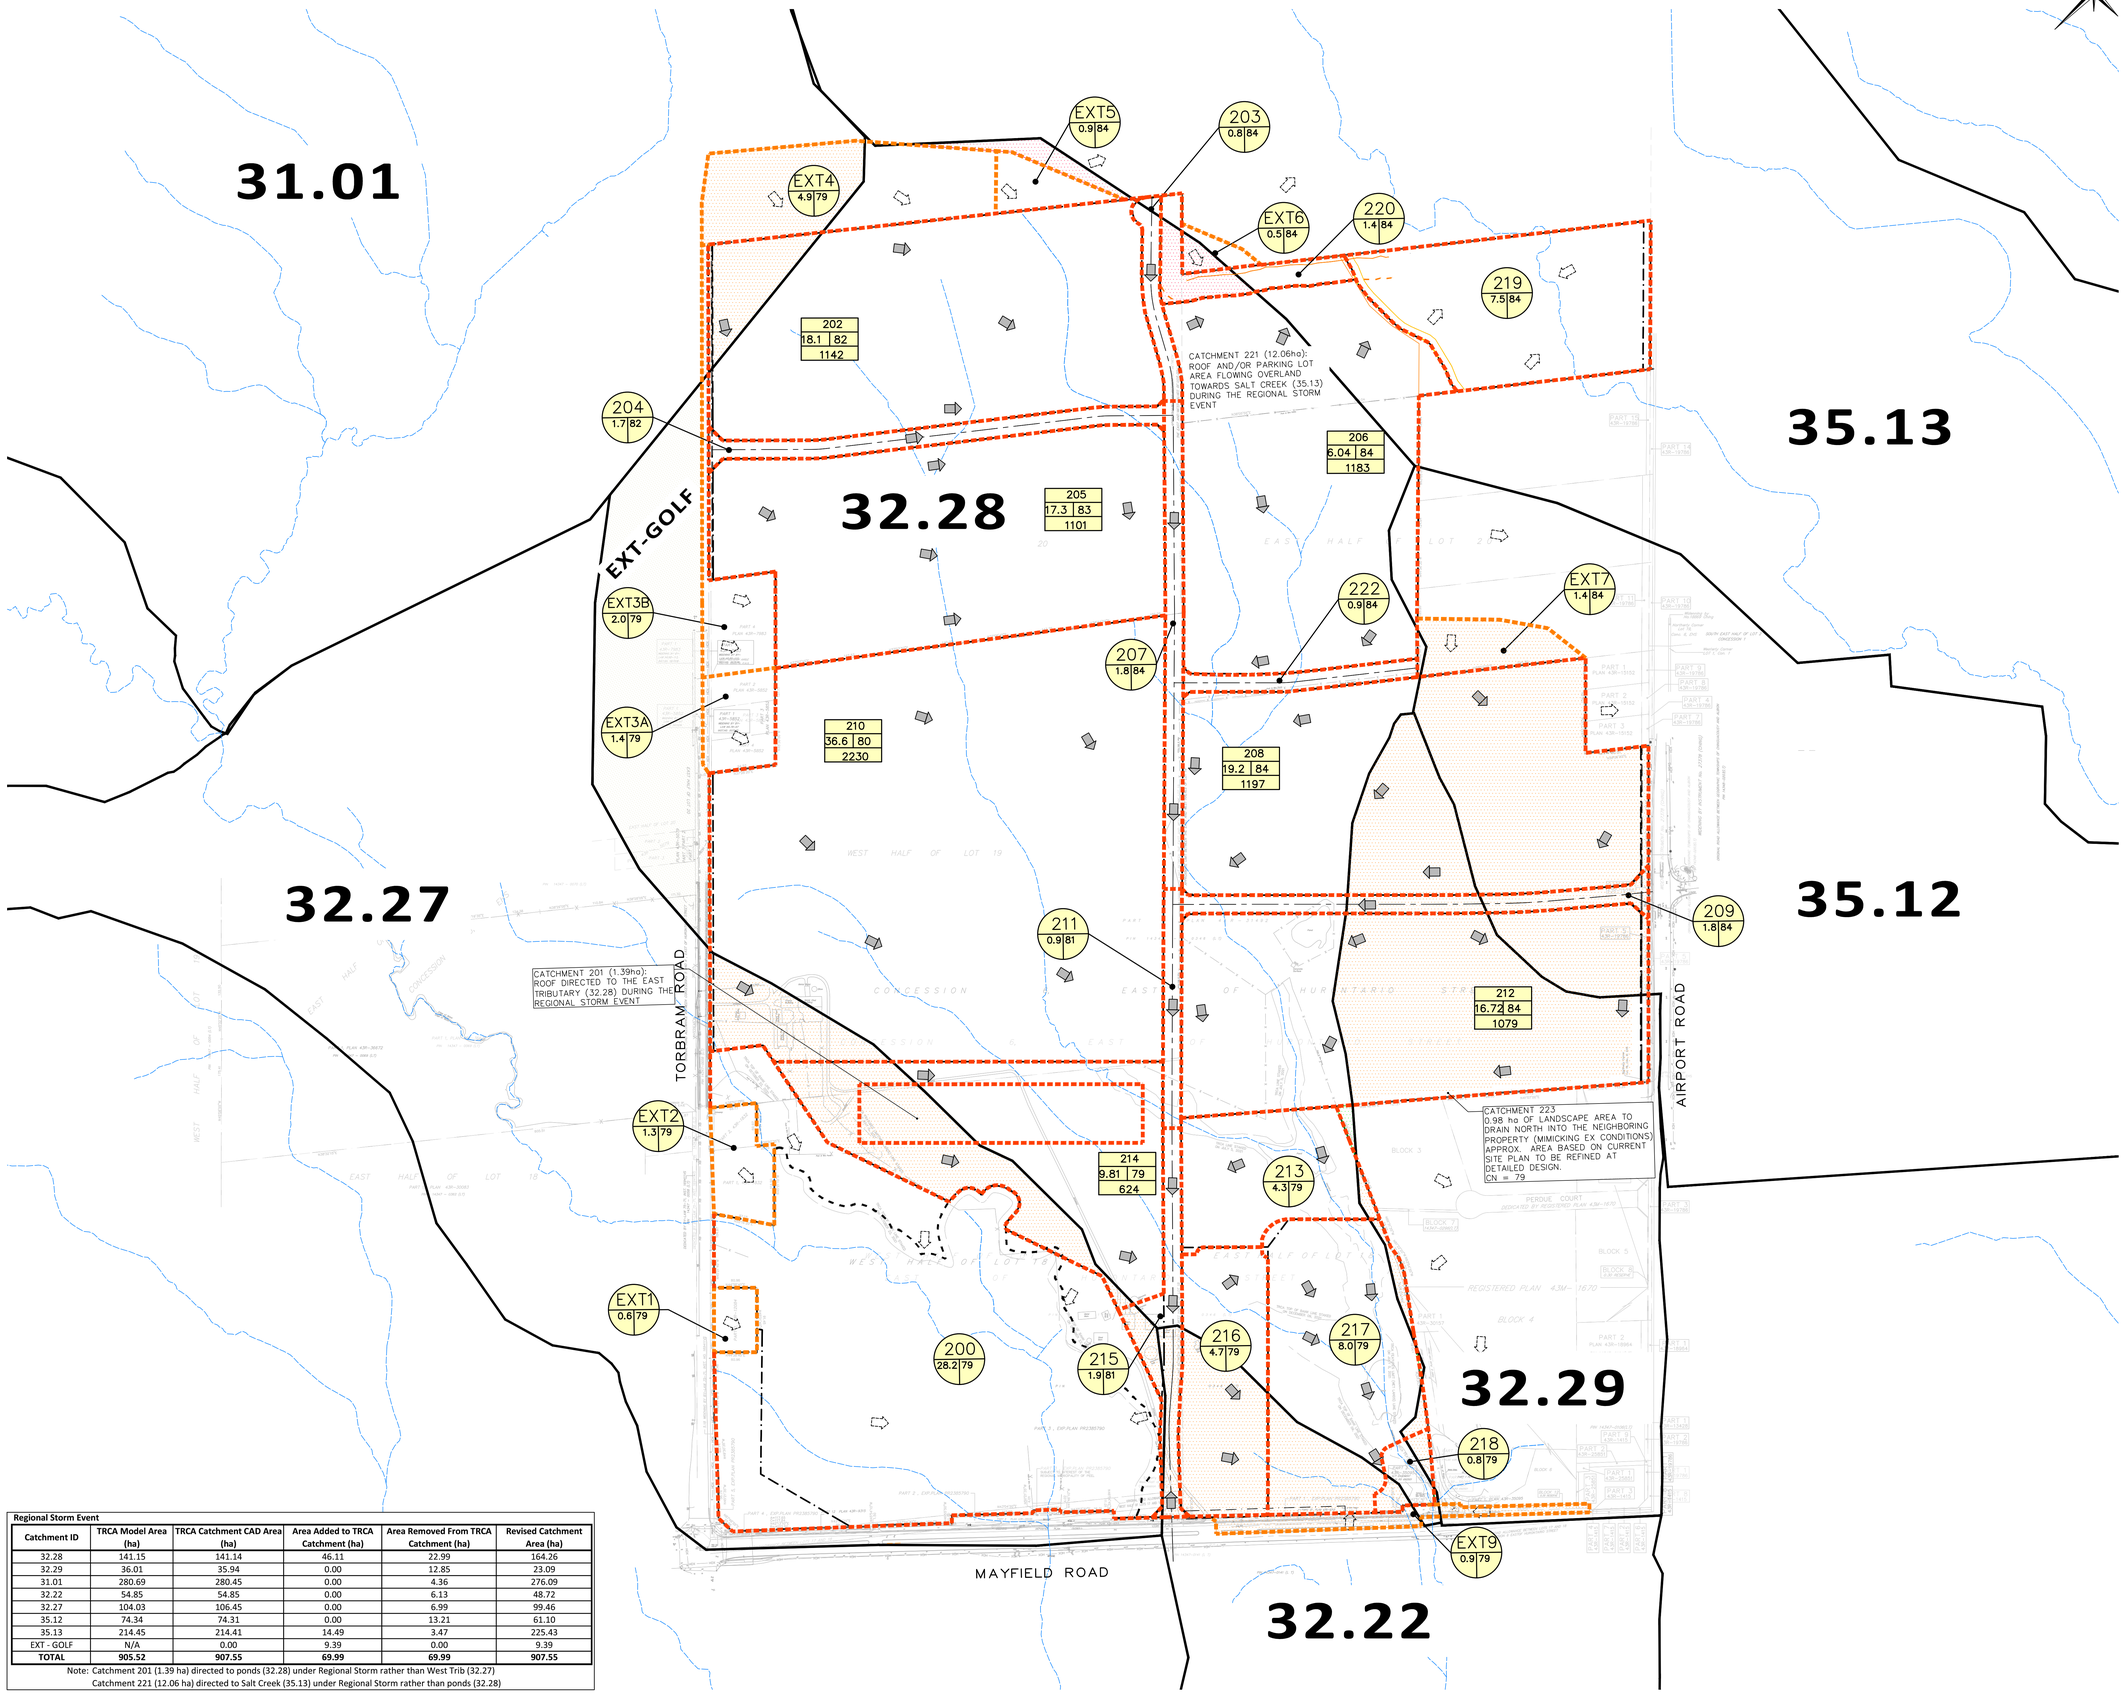

ALL EXISTING UNDERGROUND UTILITIES TO BE VERIFIED IN THE FIELD BY THE CONTRACTOR PRIOR TO CONSTRUCTION.

APPENDIX A

Topographic Survey/Draft Plan

TOPOGRAPHIC PLAN OF

PART OF LOTS 18, 19 AND 20 CONCESSION 6 EAST OF HURONTARIO STREET PART OF LOTS THE ROAD ALLOWANCE BETWEEN LOTS 17 AND 18 CONCESSION 6 EAST OF HURONTARIO STREET

(SUBJECT TO INTEREST OF THE REGIONAL MUNICIPALITY OF PEEL)

TOWN OF CALEDON
REGIONAL MUNICIPALITY OF PEEL

SCALE 1:2000

50 40 30 20 10 0 50 100 metres

YOUNG & YOUNG SURVEYING INC.
ONTARIO LAND SURVEYORS
© 2021

METRIC

DISTANCES AND COORDINATES SHOWN ON THIS PLAN ARE IN METRES AND CAN BE CONVERTED TO FEET BY DIVIDING BY 0.3048.

NOTE

1) THIS IS NOT A PLAN OF SURVEY AND SHALL NOT BE USED FOR TRANSACTION OR MORTGAGE PURPOSES.
2) BOUNDARY INFORMATION IS COMPILED AND WAS DERIVED FROM LAND REGISTRY RECORDS AND DEPOSITED PLANS 43R-31492 AND 43R-36672.

BEARING NOTE

BEARINGS ARE UTM GRID, DERIVED FROM GPS OBSERVATION USING THE "TOPNET" GPS NETWORK OBSERVATIONS, UTM ZONE 17, NAD83 (CSRS) (1997.0).

ELEVATION NOTE

1) ELEVATIONS HEREON ARE GEODETIC IN ORIGIN AND WERE DERIVED FROM GPS OBSERVATIONS USING THE "TOPNET" GPS NETWORK AND ARE REFERRED TO THE CGVD-1928: 1978 DATUM.

2) ELEVATIONS HEREON ARE GEODETIC IN ORIGIN AND WERE DERIVED FROM CITY OF BRAMPTON MONUMENT No. 042200365 (NAD83 ADJUSTMENT) HAVING A PUBLISHED ELEVATION OF 242.135 m

LOCATED 72.80m SOUTH OF CENTRELINE OF MAYFIELD ROAD AND 19.81m EAST OF CENTRELINE OF TORBRAM ROAD.

SITE BENCHMARK:
A CUT CROSS HAVING ELEVATION 242.51 m WAS SET ON THE NORTHEAST CORNER OF THE INTERSECTION BETWEEN MAYFIELD ROAD AND TORBRAM ROAD

LEGEND

- DENOTES HYDRO POLE
- DENOTES GUY POLE
- DENOTES GUY WIRE
- DENOTES FIRE HYDRANT
- DENOTES BELL PEDESTAL
- DENOTES HAND WELL
- DENOTES MANHOLE
- DENOTES STORM MANHOLE
- DENOTES CATCHBASIN
- DENOTES DOUBLE CATCHBASIN
- DENOTES WATER VALVE
- DENOTES NATURAL GAS VALVE
- DENOTES TRAFFIC LIGHT
- DENOTES TRAFFIC LIGHT/STREET LIGHT
- DENOTES TRAFFIC SIGN
- DENOTES INVERT
- DENOTES HYDRO POLE/LIGHT STANDARD
- DENOTES CUT CROSS
- DENOTES CENTRELINE
- DENOTES TEMPORARY BENCHMARK
- DENOTES UNDERGROUND HYDRO
- DENOTES UNDERGROUND WATERMAIN
- DENOTES UNDERGROUND GAS
- DENOTES UNDERGROUND LIGHT STREET
- DENOTES UNDERGROUND BELL
- DENOTES UNDERGROUND STORM
- DENOTES OVERHEAD WIRES

REVISION NOTE

– THIS PLAN WAS REVISED ON OCTOBER 7, 2021 TO SHOW ADDITIONAL GROUND ELEVATION ON THE NORTH-WESTERLY QUADRATE OF THE PROPERTY WEST OF TORBRAM ROAD, AND EDGE OF PAVEMENT, TOP/BOTTOM OF OF BANK AND CENTRE LINE OF DITCH ALONG TORBRAM ROAD (BETWEEN THE EAST AND WEST PROPERTIES)

100-year	0.122	0.163	0.292	0.075	0.138	**0.790**	**7.882**

1. Total internal and external flows directed to the flow splitter (with Block controls).

Post-Development Peak Runoff to Wetland 1 (6-Hour)

Design Storm Event	Post-Development Uncontrolled Flow Rate (m^3/s)				
	Flow Splitter[1]	212	213	Total Site[2]	Total[3]
2-year	1.579	1.228	0.227	**1.455**	**2.106**
5-year	2.210	1.743	0.331	**2.074**	**2.949**
10-year	2.638	2.104	0.401	**2.505**	**3.521**
25-year	3.180	2.527	0.508	**3.035**	**4.235**
50-year	3.600	2.845	0.582	**3.427**	**4.791**
100-year	4.007	3.159	0.657	**3.816**	**5.332**
Regional[4]	-	-	0.620	**0.620**	**0.620**

Note: Regional flows are conveyed overland (major overland) and are therefore not directed to the flow splitter

1. Half of total internal and external flows directed to the flow splitter (with Block controls).
2. Catchment 213 + Catchment 214
3. Total internal and external flows directed to Wetland 1 (with Block controls).
4. Only flows from Catchment 213 (Wetland 1 area) is directed to Wetland 1 during the Regional event (all major overland flow directed to Wetland 2).

Post-Development Peak Runoff to Wetland 1 (12-Hour)

Design Storm Event	Post-Development Uncontrolled Flow Rate (m^3/s)				
	Flow Splitter[1]	212	213	Total Site[2]	Total[3]
2-year	1.647	0.811	0.149	**0.960**	**2.187**
5-year	2.236	1.079	0.209	**1.288**	**2.964**
10-year	2.652	1.259	0.254	**1.513**	**3.509**
25-year	3.183	1.499	0.309	**1.808**	**4.215**
50-year	3.561	1.669	0.350	**2.019**	**4.724**
100-year	3.941	0.811	0.149	**0.960**	**5.237**

1. Half of total internal and external flows directed to the flow splitter (with block controls).
2. Catchment 213 + Catchment 214
3. Total internal and external flows directed to Wetland 1 (with block controls).

Post-Development Peak Runoff to Wetland 2 (6-Hour)

Design Storm Event	Post-Development Uncontrolled Flow Rate (m^3/s)						
	Flow Splitter[1]	214	215	216	217	Total Site	Total[2]
2-year	1.579	0.730	0.116	0.244	0.412	**1.746**	**1.985**
5-year	2.210	1.031	0.169	0.356	0.589	**2.501**	**2.780**
10-year	2.638	1.227	0.205	0.433	0.733	**3.031**	**3.319**
25-year	3.180	1.476	0.257	0.532	0.903	**3.700**	**4.004**
50-year	3.600	1.662	0.293	0.610	1.035	**4.210**	**4.584**
100-year	4.007	1.847	0.328	0.708	1.201	**4.792**	**5.112**

1. Half of total internal and external flows directed to the flow splitter (with Block controls).
2. Total internal and external flows directed to Wetland 2 (with Block controls).

Post-Development Peak Runoff to Wetland 2 (12-Hour)

Design Storm Event	Post-Development Uncontrolled Flow Rate (m^3/s)						
	Flow Splitter[1]	214	215	216	217	Total Site	Total[2]
2-year	1.647	0.468	0.079	0.161	0.273	**1.142**	**2.052**
5-year	2.236	0.624	0.108	0.227	0.385	**1.571**	**2.801**
10-year	2.652	0.735	0.129	0.272	0.462	**1.870**	**3.349**
25-year	3.183	0.872	0.155	0.330	0.561	**2.248**	**4.002**
