Spiers Giffen Sanitary Sewer Extension Drawing Package

1 Introduction

1.1 Background

IBI Group Canada (IBI) has been retained by Broccolini (the "Owner") to prepare a set of engineering drawings for the extension of Abbotside Way as part of a Development Agreement, and to prepare a Functional Servicing Report to support the Zoning By-Law Amendment (ZBA) and Site Plan Application (SPA) processes for Phase 2 of a proposed industrial development located at 12304 Heart Lake Road. The site is located in the Town of Caledon (the "Town") and the Region of Peel (the "Region"). The purpose of this report is to provide a municipal servicing strategy for both sanitary discharge, and water supply. More specifically, the report will present the following:

- Evaluate groundwater quantity and quality parameters from the hydrogeological report and develop a strategy to manage groundwater under both short- and long-term conditions
- Identify sanitary servicing opportunities and constraints and evaluate the capacity of the receiving municipal sewer.
- Identify water servicing opportunities and constraints, calculate the proposed domestic water and firefighting supply needs; and evaluate the capacity of the municipal infrastructure.

The following documents have been obtained from various sources:

- Approved Town of Caledon plan and profile drawings for Abbotside Way, prepared by SCS Consulting Group Ltd. (SCS), dated August 2016;
- Mayfield West Functional Servicing and Stormwater Management Study (Mayfield West FSR), prepared by David Schaeffer Engineering Ltd., dated November 2007;
- Region of Peel 2041 Wastewater Capital Program, dated June 2020;
- Speirs Giffen Avenue Ultimate Sanitary Area Drainage Plan, prepared by IBI Group, dated July 2019;
- Approved Spiers Giffen Avenue Drawing Set, prepared by IBI Group, approved on October 16, 2019.
- Topographic Survey prepared by R-PE Surveying Ltd., dated September 2021; and,
- Architectural plans and site statistics prepared by Ware Malcomb.

1.2 Site Description

Located at 12304 Heart Lake Road in the Town of Caledon and Region of Peel, the overall subject site is approximately 37 ha in size, however, it should be noted that this report will only consider Phase 2 of the development. Phase 2 consists of a 6.53 ha lot at the southeast of the site, bounded by the Abbotside Way extension to the north, Heart Lake Road to the east, Highway 410 to the south, and Phase 1 of the same development to the west. A vicinity map and an aerial exhibit can be found as **Figure 1** and **Figure 2** respectively following the report.

The Phase 2 site is currently comprised of agricultural land and slopes in a southwesterly and southeasterly direction with a drainage split running north – south through the centre of the Phase 2 site. There is a change in elevation starting at ± 274 m at the site's high point, falling to ± 272.25 m at the west property line. There is a change in elevation starting at ± 274 m at the site's high point, falling to ± 269.5 m at the east property line. A copy of the topographic survey can be found in **Appendix A** for reference.

The site is located within the Mayfield West Study Area for which a Functional Servicing and Stormwater Management Study was completed in November 2007.

1.3 Site Proposal

As previously noted, this report will only consider Phase 2 of the development, which includes a 29,830 m^2 building (Building 2) within a 6.53 ha lot at the southeast corner of the site. Construction will be slab on grade, with no underground levels. Sample architectural drawings can be found in **Appendix A** for reference.

It should also be noted that Abbotside Way will be extended in an easterly direction to Heart Lake Road and is to be conveyed to the Town through a Development Agreement.

2 Terms of Reference and Methodology

2.1 Terms of Reference

The terms of reference used for the scope of this report are based on the Region's Design, Specifications, and Procedures Manual for Linear Infrastructure, dated March 2017; the Town's Engineering design criteria; and the aforementioned background studies and reports.

2.2 Methodology: Sanitary Discharge

Peak sanitary sewer flows, excluding infiltration, will be based on Region of Peel Sewage Flows (Excluding Infiltration) Std. Dwg. 2-9-2 as outlined in the Region of Peel Sanitary Sewer Design Criteria dated March 2017. This standard detail drawing is based on the sanitary design parameters outlined in **Table 2.1** below, in accordance with the Region's sanitary design criteria. Based on the calculated peak flows, the adequacy of the existing infrastructure to support the proposed development will be discussed.

Table 2.1 Sanitary Design Parameters

Criteria	Unit	Source
Industrial Population	70 pp/ha	Peel
Average Flow	302.8 L/cap/day	Peel
Infiltration	0.0002 m^3/s/ha	Peel

2.3

2.4 Methodology: Water Usage

The domestic water usage will be calculated based on **Table 2.2** below, in accordance with the Region's design criteria. Pressure and flow testing to determine the adequacy of the existing watermain to support the development with fire suppression in accordance with the Fire Underwriters Survey (FUS) Guidelines will be discussed in the subsequent sections.

Table 2.2 Water Design Parameters

Criteria	Unit	Source
ICI Average Consumption	300 L/Employee/day	Peel
Maximum Day Factor	1.4	Peel
Peak Hour Factor	3.0	Peel

3 Groundwater Discharge

3.1 Groundwater Quality

A hydrogeological assessment was carried out by EXP Services Inc. (EXP) to assess existing groundwater conditions from both quality and quantity perspectives. The following table is a summary of the observed groundwater quality parameters compared to the Region's limits for discharge:

Table 3.1 Groundwater Quality Exceedances

Parameter	Storm By-Law Criteria (µg/L)	Sanitary By-Law Criteria (µg/L)	Measured Reading (µg/L)
Total Manganese	50	5,000	**78**
Chloroform	2	40	**2.8**

Per the hydrogeological assessment, observed levels of Total Manganese and Chloroform exceed the City's and Region's threshold for discharge to storm sewer but meet the threshold for discharge to sanitary sewers. Despite this, as noted in the Hydrogeological Report, during construction it is anticipated that TSS levels and some other parameters may become elevated and exceed both sanitary and storm use by-law limits. It is recommended that a suitable treatment method be implemented during construction dewatering activities to discharge to the applicable sewer system. For more information, please see **Appendix B** for an excerpt copy of the hydrogeological assessment.

3.2 Short-term Groundwater Discharge

The anticipated average short-term groundwater discharge has been estimated by EXP as shown in the table below. At the time of this report, a dewatering plan was not made available. It is therefore assumed that groundwater pumping will operate for 16 hours per day resulting in a corresponding maximum pumping rate as shown:

Table 3.2 Short-Term Groundwater Discharge

Building	Average Discharge[1]	Average Discharge	Hours of Operation	Peak Discharge	Connection Outlet	Treatment Required
Building 2	483,000 L/day	5.6 L/s	16 hrs	8.4 L/s	Sanitary	None

It should be noted that a Permit to Take Water (PTTW) application must be submitted to the Ministry of the Environment, Conservation and Parks (MECP) if dewatering rates exceed 50 m^3/day.

3.3 Long-term Groundwater Discharge

Per the hydrogeological assessment, a Private Water Drainage System (PWDS) will not be required, as the building will utilize slab on grade construction. Please see **Appendix B** for an excerpt copy of the hydrogeological assessment.

4 Sanitary Drainage System

4.1 Existing Sanitary Drainage System

Per the proposed Abbotside Way extension plan and profiles, prepared by SCS Consulting attached in **Appendix A**, proposed sanitary infrastructure within the Abbotside Way extension will consist of 300 mm sanitary sewers which flow in an easterly direction across Heart Lake Road. These sewers connect to the proposed sanitary infrastructure included as part of the future Spiers Giffen extension (as prepared by IBI Group, dated July 2019) and convey flows to 525 mm sanitary trunk sewers on Spiers Giffen and Dixie Road. Further west of the Phase 2 subject site, existing 250 mm sanitary sewers convey flow in a westerly direction to a 525mm sanitary trunk sewer within Kennedy Road.

4.2 Proposed Sanitary Drainage System

As illustrated in the sanitary drainage area plans prepared by SCS, the overall site has been identified as industrial lands. The Phase 2 portion in the southeast corner has been allocated to the approved 300 mm sanitary sewers which have been identified as part of the plan and profiles (#409 and #410) for the **Abbotside Way Extension**. These sanitary sewers will convey flows in an easterly direction to the Spiers Giffen Avenue sanitary sewer system east of Heart Lake Road which is approved but has not yet been extended to Heart Lake Road. The Spiers Giffen sanitary sewer system was previously designed by IBI Group and has since been approved on October 16, 2019.

[1] Includes short-term groundwater discharge with a safety factor of 2.0, and stormwater removal from a 15 mm precipitation event

It is therefore proposed to install this 300 mm sanitary sewer which will convey flows in an easterly direction to Heart Lake Road as part of proposed **Abbotside Way Extension**. Furthermore, the remaining length of sanitary sewer east of Heart Lake Road, which is part of the Spiers Giffen Phase 2 extension is also proposed to be constructed and drawing sets for both the Abbotside Way Extension and the Spiers Giffen sanitary sewer extension have been included in this submission package.

Copies of the approved plan and profile drawings prepared by SCS for the **Abbotside Way Extension** can be found in **Appendix A**. Copies of the originally designed and approved **Spiers Giffen Avenue** have also been included in **Appendix A**. Excerpt copies of the Mayfield West FSR, Speirs Giffen sanitary drainage area plan, and the Livingston Estates drainage area plan prepared by SCS can be found in **Appendix C** for reference.

4.3 Post-Development Population

The following post-development population will be used to size the sanitary service connection:

Table 4.1 Post-Development Populations

Building	Area	Population Density	Pop.
Building 2	6.53 ha	70 pp/ha/day	457

Please see **Appendix C** for the detailed design sheet.

4.4 Post-Development Sanitary Design Flow

Based on the criteria set in **Section 2.2** and based on the Region of Peel Sewage Flows Std. Dwg. 2-9-2, the post-development sanitary sewage flow is **13 L/s**, with and additional **1.3 L/s** allotted for infiltration. The total peak post-development sanitary design flow is **14.3 L/s**.

4.5 Sanitary Service Connection

A 300 mm sanitary service will need to be installed as part of the proposed **Abbotside Way Extension**.

The following table illustrates the peak flow and corresponding capacity of the proposed service:

Table 4.2 Sanitary Service Performance

Building	From	To	Service Size (mm)	Service Slope	Peak Flow (L/s)	Capacity (L/s)	Percent of Full Flow
Bldg. 2	Cntrl.MH	300mm Mainline San. Sewer	300	1.0 %	14.3	100.9	14 %

As shown above, the sanitary service will convey the post-development peak sanitary flow while operating at 14% of full flow capacity.

Please see the approved plan and profile drawings prepared by SCS which can be found in **Appendix A**, the detailed design sheet which can be found in **Appendix C**, and the enclosed **Abbotside Way Extension** drawing set.

4.6 Sanitary Sewer (Abbotside Way Extension)

As previously mentioned, the Phase 2 development will rely on new, proposed 300 mm sanitary sewers which are to be installed within the Abbotside Way extension at a 0.4% slope as outlined in the approved Livingston Estates Plan and Profiles prepared by SCS. This new municipal sewer is to be connected to the proposed Speirs Giffen sanitary sewer extension, east of Heart Lake Road which is also to be constructed within the same timeline as this development. Please see approved plan and profile drawings prepared by SCS which can be found in **Appendix A** for reference, and the new Spiers Giffen Sanitary Sewer Extension drawings enclosed for reference.

4.7 Sanitary Sewer (Spiers Giffen Sanitary Sewer Extension)

The Phase 2 development will also rely on the extension of sanitary sewers along future Spiers Giffen Avenue. The existing sanitary infrastructure on Spiers Giffen Avenue currently terminates at a cul-de-sac, several hundred meters east of Heart Lake Road. In order to bridge the gap between the proposed sanitary sewers which are to be installed as part of the Abbotside Way Extension previously noted in Section 4.6, and the existing sanitary sewers on Spiers Giffen Avenue, the sanitary sewer infrastructure must be extended as per the approved Spiers Giffen Avenue Phase 2 plans prepared by IBI Group and approved in October 2019. The sanitary sewer extension has been designed in detail and included under a separate cover as part of this submission.

5 Water Supply System

5.1 Existing Water Supply System

Per the proposed Abbotside Way extension plan and profiles, prepared by SCS Consulting attached in **Appendix A**, proposed water infrastructure within Abbotside Way consists of a 300 mm watermain, a local 400 mm watermain within Heart Lake Road, and both a 900 mm and a 1200 mm feedermain within Heart Lake Road.

Hydrant flow testing was performed at existing fire hydrants along Abbotside Way to confirm the available water supply's flow-pressure response curve. These tests were performed on November 18, 2021 and were conducted in accordance with NFPA 291. The results are summarized as follows:

Table 5.1 Hydrant Response Curve

Abbotside Way			
Flow (gpm)	**Flow (L/s)**	**Pressure (psi)**	**Pressure (kPa)**
0	0	81	558
1,126	71.0	74	510
1,838	116.0	73	503

As shown above, static pressure within the system is expected to be approximately 81 psi. A copy of the hydrant flow test can be found in **Appendix D** for reference.

5.2 Proposed Water Supply System

As part of the Mayfield West FSR, the existing 300 mm watermain within Abbotside Way shall be extended within the proposed Abbotside Way extension and connected to the existing 400 mm watermain within Heart Lake Road. Please refer to the water distribution plan as part of the Mayfield West FSR which can be found in **Appendix D** for reference.

5.3 Domestic Water Supply Demands

The Average Day Demand (ADD), Peak Hour Demand (PHD), and Max Day Demand (MDD) for the overall site have been calculated using the criteria set in **Section 2.3**, and are summarized as follows:

Table 5.1 Domestic Water Demands

Building	Population	ADD (L/s)	PHD (L/s)	MDD (L/s)
Building 2	458	1.6	4.8	2.2

The domestic supply line for the building will be designed based on PHD while maintaining a minimum available pressure of 40 psi (275 kPa) at the face of the building. Please see **Appendix D** for the detailed calculations.

5.4 Fire Supply Demands

The recommended fire flow demand for the building has been calculated using the design criteria outlined in the Water Supply for Public Fire Protection Manual, 1999 by the Fire Underwriters Survey (FUS). As the building will constructed using fire resistive materials, the effective floor area is taken as the largest floor area plus 25 % of the two adjacent floors. The corresponding floor area and FUS factors will be applied as follows:

Table 5.2 Effective Floor Area and Fire Underwriters Survey Factors

Building	Floor Area (m^2)	Construction Coefficient	Building Occupancy	Sprinkler Adjustment	Proximity Factor
Building 2	29,830	0.6 (resistive)	-15% (limited)	-30%	+15%

Using the effective floor area for the building and the appropriate FUS factors, the required fire flow is calculated as follows:

Table 5.3 Fire Demand Calculations

Fire Flow (F) Calculation	Applying FUS factors	Adjusted Fire Flow	Total Demand (TD)
$F = 220 \cdot 0.6 \sqrt{Area}$	$F_1=F \cdot 0.85$ = 19,550 L/min	Fire Flow = $F_1 - F_2 + F_3$	TD= FF + MDD
$F = 220 \cdot 0.6 \sqrt{29,830\ m^2}$	$F_2=F_1 \cdot 0.30$ = 5,865 L/min	FF= 17,000 L/min *(rnd'd)*	TD= 283.3 L/s + 2.2 L/s
F = 23,000 L/min *(rnd'd)*	$F_3=F_1 \cdot 0.15$ = 2,933 L/min	FF = 283.3 L/s	**TD= 285.6 L/s**

The fire supply line for the building will be designed based on Total Demand (Fire Flow + MDD) while maintaining a minimum available pressure of 20 psi (140 kPa) at the face of the building. Please see **Appendix D** for the detailed calculations.

5.5 System Pressure Under Normal Operation

As previously mentioned, the domestic service for the building shall be sized to convey domestic demands under normal system operating conditions (PHD) while maintaining a minimum available pressure of 40 psi (275 kPa). The residual pressure at the building is calculated by first interpolating the PHD residual pressure within the existing watermain, and then subtracting head losses within the system using the Hazen-Williams formula. The following table summarizes the residual pressure for the proposed domestic service:

Table 5-2 Residual Pressure under PHD Conditions

Flow Conditions	PHD (L/s)	Domestic Service (mm)	Residual Pressure @ Main		Residual Pressure @ Bldg.	
			(psi)	(kPa)	(psi)	(kPa)
PHD	4.8	150	81	558	81	558

As shown above, there is no appreciable head loss within the system, and the residual pressure at the building face is above the minimum acceptable pressure of 40 psi (275 kPa) under PHD conditions. Please see **Appendix E** for the detailed design calculations.

5.6 System Pressure Under Fire Flow

As previously mentioned, the fire service shall be sized to convey the total fire demand (Fire + MDD) while maintaining a minimum available pressure of 20 psi (140 kPa). The residual pressure at the building is calculated by first interpolating the residual pressure within the existing watermain, and then subtracting head losses within the system using the Hazen-Williams formula. The following table summarizes the residual pressure for the proposed fire service:

Table 5-3 Residual Pressure under Fire + MDD Conditions

Flow Conditions	FF+MDD (L/s)	Fire Service (mm)	Residual Pressure @ Main		Residual Pressure @ Bldg.	
			(psi)	(kPa)	(psi)	(kPa)
FF+MDD	285.6	300	39	266	34	238

As shown above, the residual pressure at the building face for the fire service is above the minimum acceptable pressure of 20 psi (140 kPa) under fire demand conditions (Fire + MDD). Please see **Appendix D** for the detailed design calculations.

5.7 Water Service Connections

To service the proposed building, a new 300 mm fire service is proposed to be looped around the building with two connections to the proposed 300 mm watermain within the Abbotside Way Extension. A separate 150 mm domestic service will tee off from the fire line, and a new valve and box shall be installed at the property line for each incoming service.

Each incoming 300 mm fire service shall be installed with a detector check valve placed in a 1800 mm precast chamber per Peel Dwg. 1-3-1, and the incoming 150 mm water service shall be installed with a meter placed in a 1500 mm precast chamber per Peel Dwg. 1-4-4.

The National Fire Protection Association (NFPA) considers any building over 23 m in height to be classified as a high-rise building and thus requires a remotely located secondary siamese connection for each zone. As the proposed building is less than 23 m in height, one siamese connection will suffice, however additional siamese connections may be required for multiple fire zones, and shall be confirmed at the Building Permit stage. Two Siamese connections have been provided along the north face of Building 2. All siamese connections are placed within 45 m of a hydrant.

Please see enclosed servicing drawings **SS-01** through **SS-04**, and the enclosed **Abbotside Way Extension** drawing set for reference.

5.8 Hydrant Coverage

Existing hydrants are located on the north side of Abbotside Way and on either side of Heart Lake Road. Four new municipal hydrants are proposed within the north boulevard of the **Abbotside Way Extension**. Additional private hydrants shall be installed around the permitter of Building 2, and as previously mentioned all proposed siamese connections shall be strategically placed within 45 m of a hydrant to satisfy OBC requirements.

Please see Drawings **SS-01** through **SS-04** and the enclosed **Abbotside Way Extension** drawing set for the location of all existing and proposed water infrastructure.

6 Conclusions and Recommendations

Sanitary Sewers

The receiving sanitary system within the Abbotside Way Extension, which was designed as part of the Mayfield West FSR, and detailed as part of the Livingston Estates FSR, has been sized to accommodate sanitary flows from the subject site.

Water Supply

The existing watermain network has been designed in accordance with the Mayfield West FSR. It is noted that additional hydrant testing will be conducted shortly, and it is expected that the watermain network will easily support the proposed fire and domestic water demands for the proposed development.

Summary

In summary, it can be concluded that both the Zoning By-Law Amendment and Site Plan Application can be supported from a municipal site servicing perspective subject to further fire flow testing.

Should you have any questions, please do not hesitate to contact the undersigned.

Respectfully Submitted,

IBI Group Canada Inc.

SITE PLAN NOTES

1. PROPERTY LINE
2. 2.75x6.00m PARKING STALL, PAINTED PARKING STRIPPING PER CITY STANDARDS.
3. PRINCIPLE ENTRY – TO HAVE AUTOMATIC DOOR OPERATOR INSTALLED AND BE KEPT CLEAR OF ANY BARRIERS OR OBSTRUCTIONS.
4. 1500mm MIN. WIDE SIDEWALK TYPICAL U.N.O – TO BE POURED CONCRETE, UNIT PAVING, OR PERMEABLE PAVEMENT
5. DRIVE–IN RAMP, SEE CIVIL DRAWING FOR SLOPE %
6. ACCESSIBLE PARKING SIGNS CENTERED AT THE END OF ALL ACCESSIBLE PARKING SPACES, TO BE MIN MOUNTED 1.0M (MAX 2.0M) ABOVE PARKING LOT SURFACE, POLE MOUNTED AND DESIGNED IN ACCORDANCE WITH SECTION 11 OF REG. 581 WITHIN THE HIGHWAY TRAFFIC ACT. ALL SIGNAGE AT 'TYPE A' SPACES TO IDENTIFY SPACE AS "VAN ACCESSIBLE"
7. CONCRETE APRON – SEE CIVIL DWGS.
8. LANDSCAPE AREA – SEE LANDSCAPE DWGS.
9. PROVIDE CONCRETE FILLED PROTECTION BOLLARDS AT BOTTOM OF STEEL STAIRS AT EACH GUARDRAIL.
10. TYPICAL SHARED ACCESSIBLE PARKING STALLS, PAINTED PARKING STRIPING PER CITY STANDARDS. EACH PAIR OF SHARED STALLS TO HAVE (1) TYPE A (3.40x6.00m) & (1) TYPE B (2.75x6.00m) STALL C/W A 1.5m PAINTED AISLE – REFER TO SCHEDULE 'K' TOWN OF CALEDON STANDARDS AND DETAIL A/A1.2 C/W ACCESSIBLE PARKING SIGNAGE
11. 150mm WIDE CURB TYPICAL
12. LOADING SPACE – L.S. (3.5m x 14.0m)
13. FIRE DEPARTMENT CONNECTION / SIAMESE
14. TRUCK LOADING DOCK, TYP.
15. FIRE ACCESS ROUTE W/ 12.0m TURNING RADIUS (————) PROVIDE FIRE ROUTE SIGNAGE AS REQUIRED BY TOWN OF CALEDON BY–LAW BL–2015–058, AS PER DETAIL B/A1.2.
16. PEDESTRIAN WALKWAY WITH PAINTED LINE PER TOWN OF CALEDON STANDARDS.
17. LINE OF CANOPY ABOVE
18. PROPOSED LOCATION OF ELECTRICAL ROOM
19. PROPOSED LOCATION OF MECHANICAL ROOM
20. HATCHED AREA DENOTES HEAVY DUTY ASPHALT. TYPICAL FOR ALL AREAS REQUIRING FIRE TRUCK OR TRACTOR TRUCK ACCESS. FIRE ACCESS ROUTE WILL BE DESIGNED TO SUPPORT A LOAD OF NOT LESS THAN 11,363 Kg. PER AXLE AND HAVE A CHANGE IN GRADIENT OF NOT MORE THAN 1 IN 12.5 OVER A MINIMUM DISTANCE OF 15 M.
21. FIRE HYDRANT
22. ROAD CURB AND SIDEWALK TO BE CONTINUOUS THROUGH THE DRIVEWAY. DRIVEWAY GRADE TO BE COMPATIBLE WITH EXIST. SIDEWALK AND A CURB DEPRESSION WILL BE PROVIDED AT EACH ENTRANCE. SITE ENTRANCE PER CITY STANDARD DRAWING NO. 402, OPSD 350.010. SHALL COMPLY WITH THE REQUIREMENTS OF SECTION 80.27 OF THE IAS.
23. DETECTABLE TACTILE WARNING SURFACE. CONFORIMNG TO 2012 O.B.C
24. ACCESSIBLE CURB RAMP
25. PEDESTRIAN RAIL SET INTO RETAINING WALL WHERE GRADE CHANGE GREATER THAN 0.60m. PROVIDE CONCRETE–FILLED STEEL BOLLARD AT END OF RETAINING WALL – SEE CIVIL DWGS.
26. AMENITY AREA – REFER TO LANDSCAPE DWGS
27. ACCESSIBLE RAMP
28. LOCATION OF BICYCLE RACK – SEE LANDSCAPE DWGS.
29. RETAINING WALL – SEE CIVIL DWGS.

THIS IS NOT A PLAN OF SURVEY AND SHALL NOT TO BE USED EXCEPT FOR THE PURPOSE INDICATED IN THE TITLE BLOCK.

NOTES

BOUNDARY LINE–WORK TAKEN FROM PLAN OF SURVEY BY R–PE SURVEYING LTD., DATED FEBUARY 5, 2021. (CAD FILE No. 21–009R01)

THIS SKETCH IS AN ORIGINAL COPY IF EMBOSSED BY THE SURVEYOR.

THE FIELD OBSERVATIONS REPRESENTED ON THIS PLAN WERE COMPLETED ON

THE 15th DAY OF SEPTEMBER, 2021

BENCHMARK NOTE

ELEVATIONS ARE GEODETIC AND ARE REFERRED TO MTO VERTICAL BENCHMARK NUMBER 0081999991 HAVING AN ORTHOMETRIC ELEVATION OF 265.112 METRES. ELEVATIONS ARE REFERENCED TO THE CANADIAN GEODETIC VERTICAL DATUM OF 1928, 1978 ADJUSTMENT (CGVD–1928:1978).

BENCHMARK SET IN TWO STOREY RED BRICK HOUSE ON EAST SIDE OF HWY 10, 2.7 KM NORTH OF JUNCTION OF HWY 10 AND PEEL REGIONAL ROAD 14 IN THE HAMLET OF SNELGROVE, 0.4 KM SOUTH OF CALEDON SIDEROAD 22 AND 137.8 M EAST OF CENTRELINE OF HWY 10. TABLET IS SET HORIZONTALLY IN WEST FACE OF STONE FOUNDATION, 70 CM SOUTH OF N.W. CORNER AND 9 CM BELOW BRICKWORK.

TOWN OF CALEDON

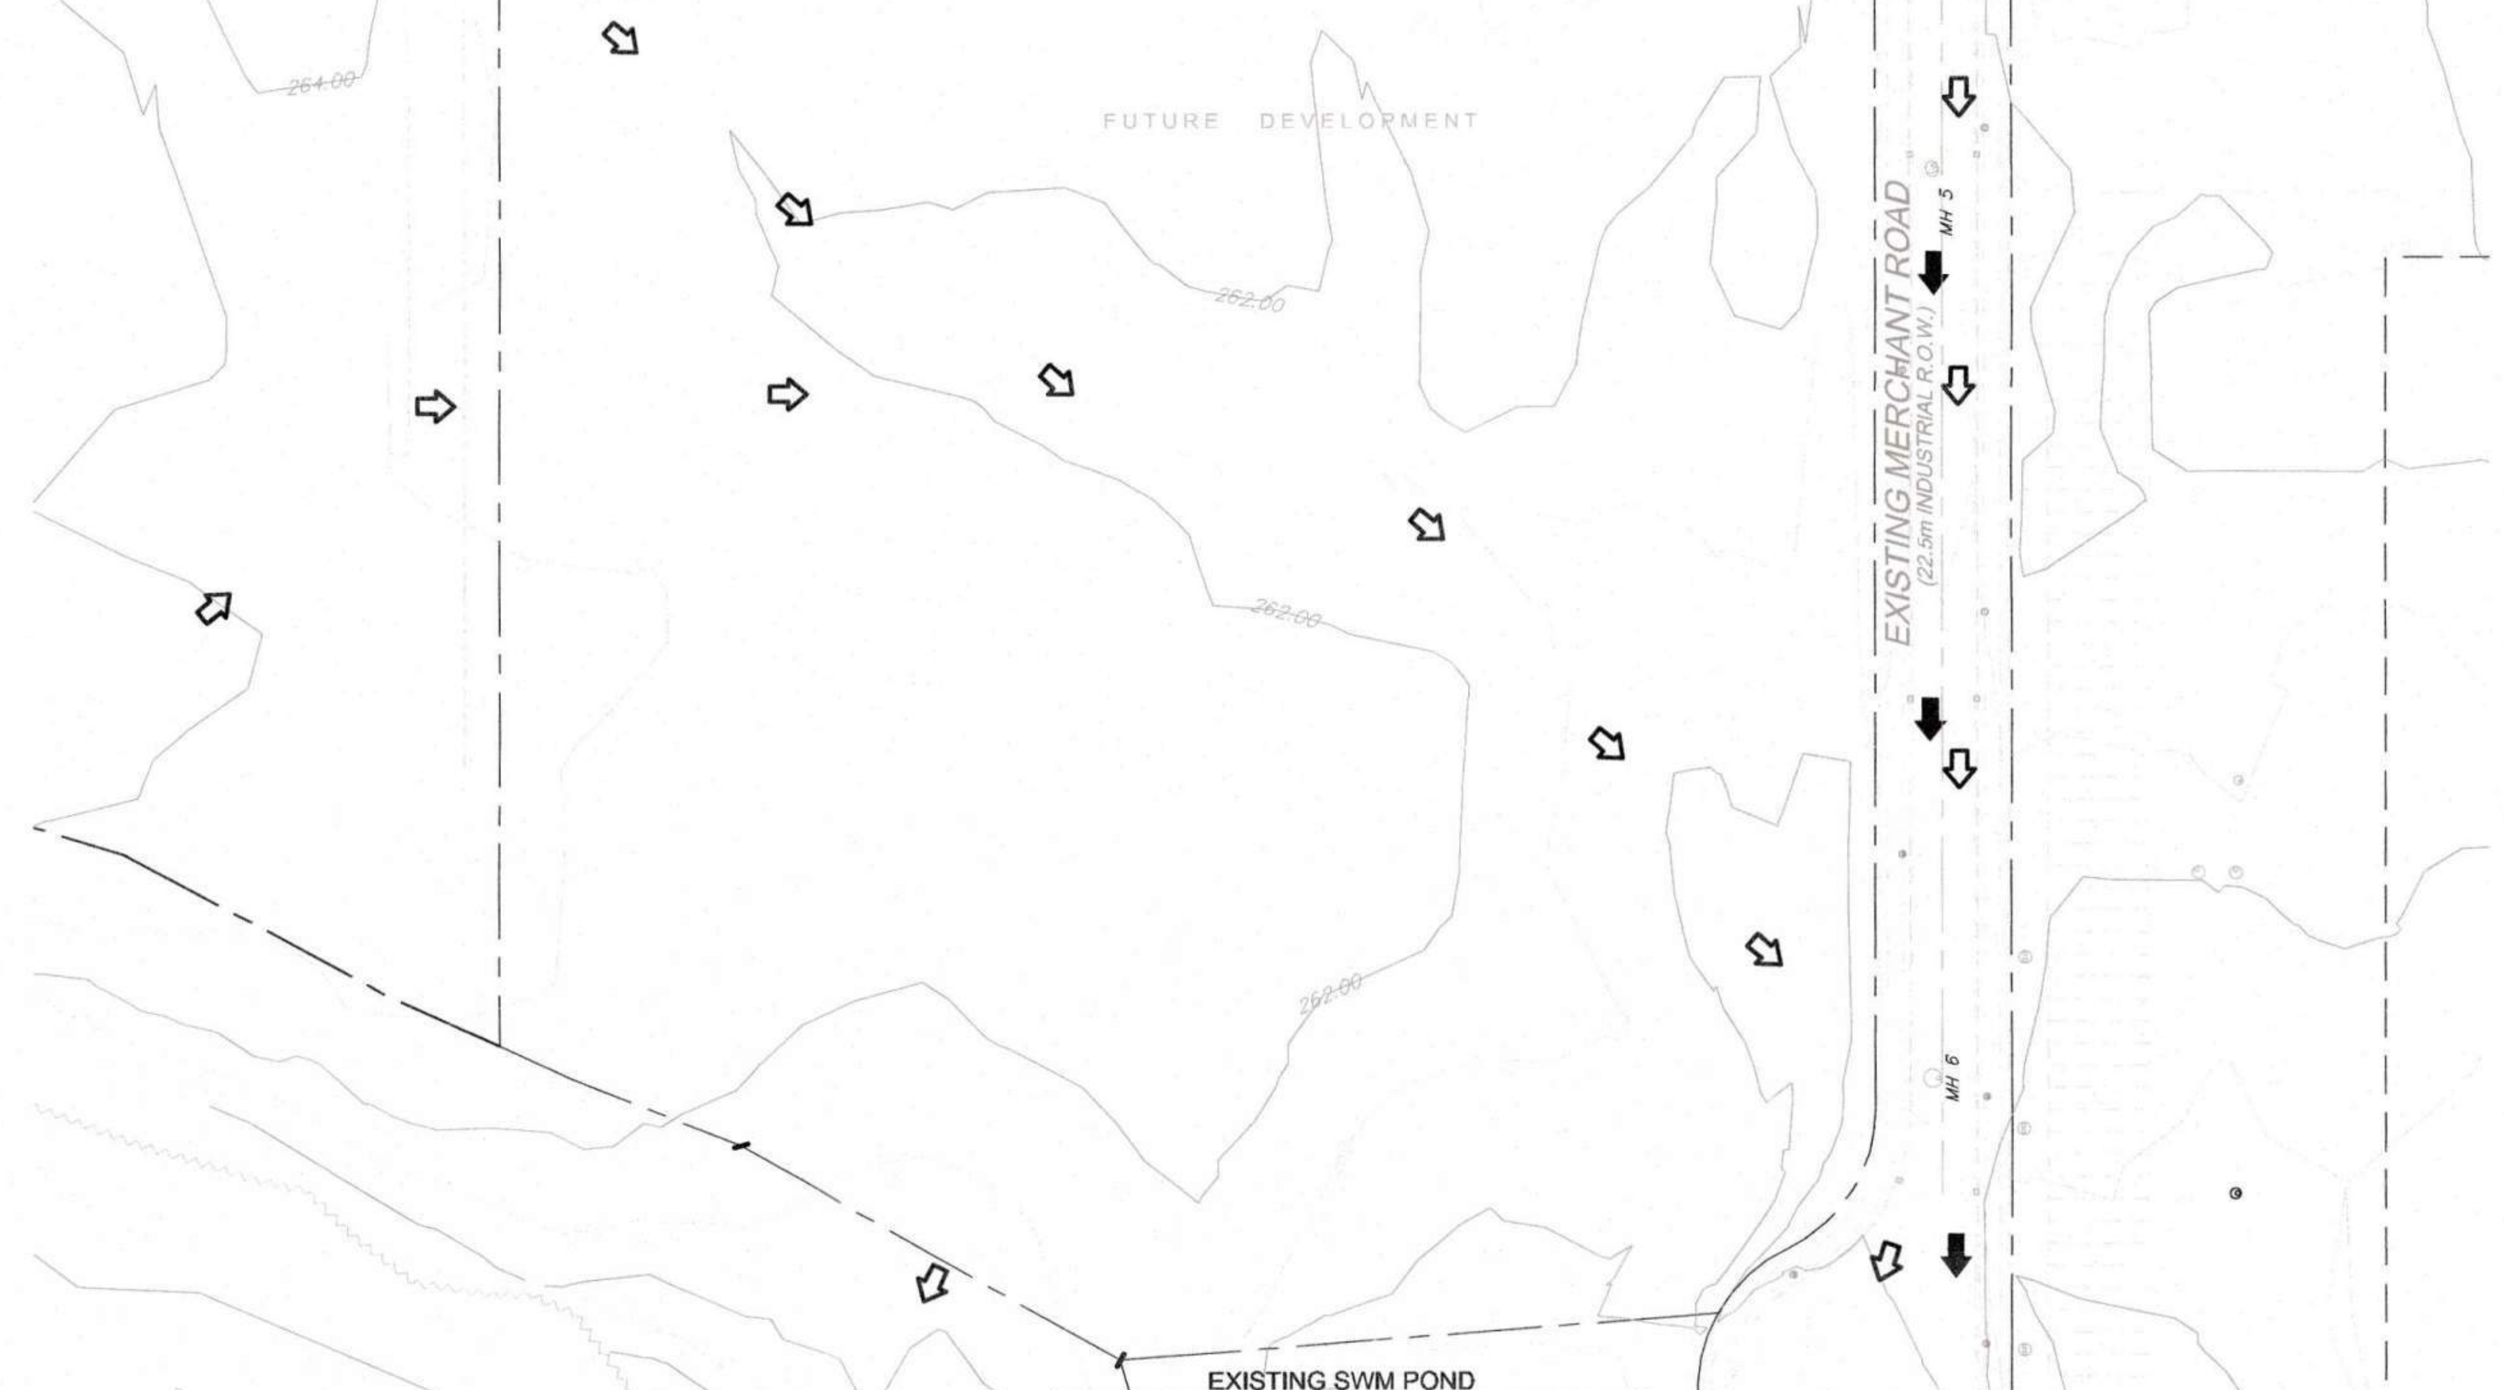
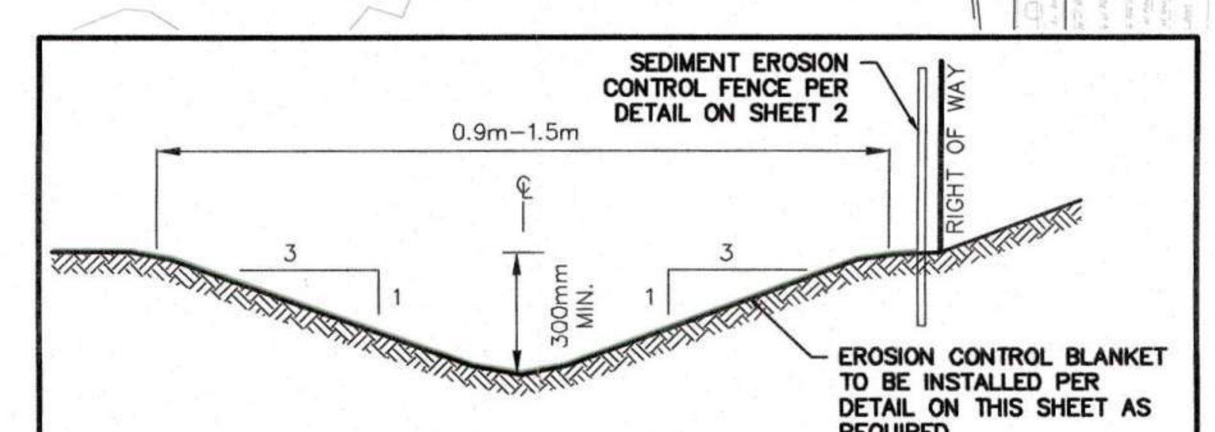
Region of Peel
working with you

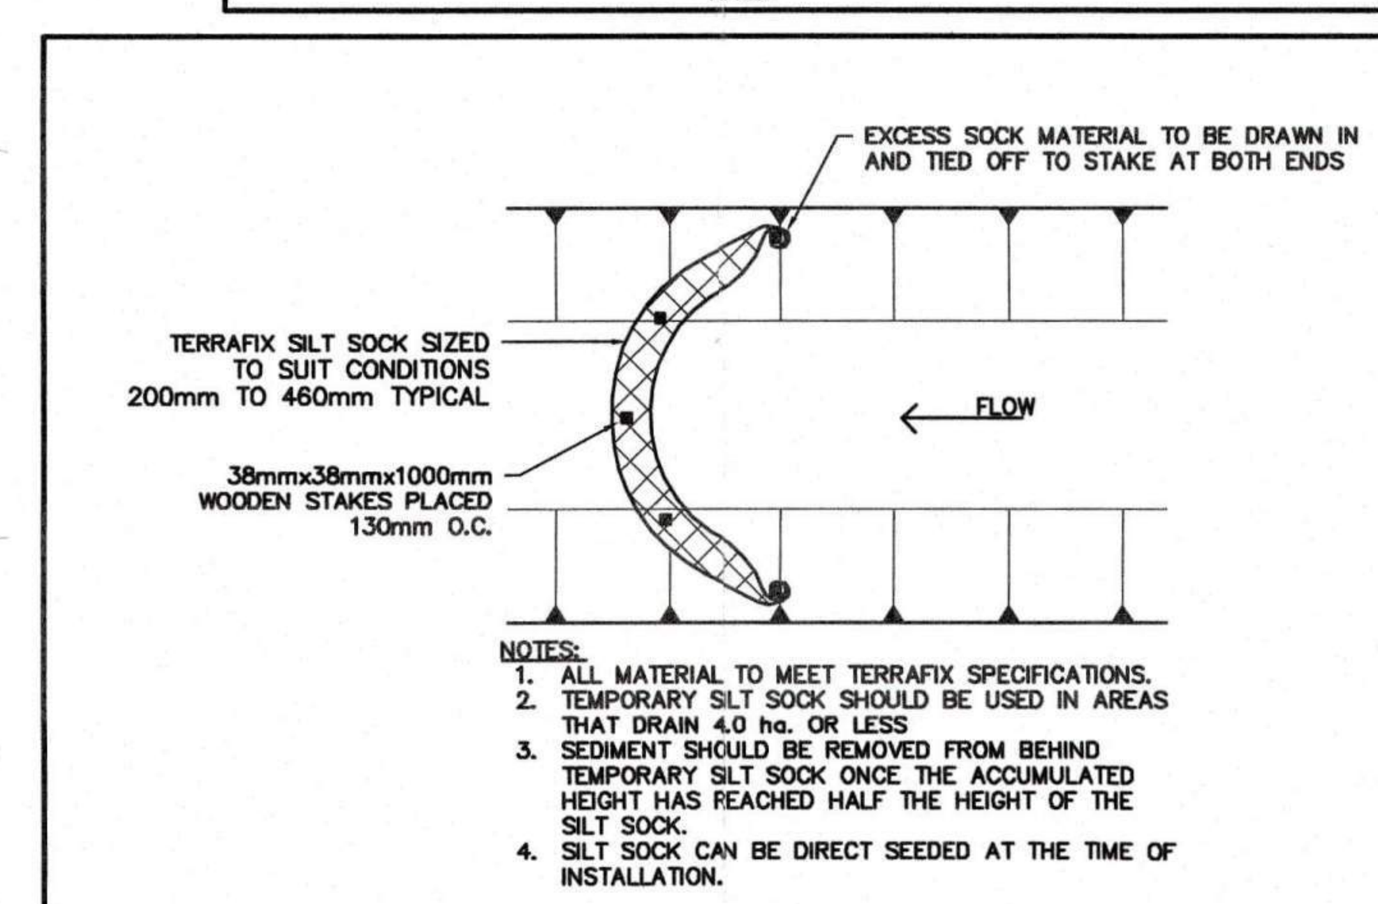
EROSION CONTROL MEASURES

1. ALL EROSION AND SEDIMENT CONTROL FACILITIES ARE TO BE INSPECTED BY THE CONSULTING ENGINEER ONCE A WEEK AND AFTER EACH RAINFALL OF 10mm OR GREATER OR A SIGNIFICANT SNOW MELT. DAILY INSPECTIONS ARE REQUIRED DURING EXTENDED RAINFALL OR SNOW MELT PERIODS.
2. ALL DAMAGED ESC FACILITIES ARE TO BE REPAIRED AND/OR REPLACED WITHIN 48 HOURS OF INSPECTION.
3. SILTATION CONTROL DEVICES SHALL BE INSTALLED PRIOR TO WORKS COMMENCING ON THE SITE AND SHALL BE MAINTAINED FOR THE DURATION OF CONSTRUCTION, TO THE SATISFACTION OF THE CITY.
4. ALTERNATIVE METHODS OF EROSION CONTROL MUST BE REVIEWED AND APPROVED BY IBI GROUP PRIOR TO IMPLEMENTATION. CONTRACTOR TO SUBMIT PLAN FOR REVIEW AND APPROVAL BY IBI GROUP.
5. SILT FENCING SHALL BE AS PER TOWN OF CALEDON STD NO.304 PER DETAIL AND INSTALLED PRIOR TO COMMENCEMENT OF ANY AREA GRADING, EXCAVATION OR DEMOLITION AND LOCATED WHERE OFF-SITE FLOWS OCCUR.
6. ALL CATCHBASINS TO HAVE SEDIMENT TRAP OR SEDIMENT BARRIER INSTALLED AS PER TOWN OF CALEDON STDS NO.302 AND 303.
7. ALL STOCKPILE LOCATIONS TO BE MINIMUM 2.50m FROM PROPERTY LINE AND SURROUNDED BY SILT FENCING TO AVOID OFF-SITE MIGRATION OF SEDIMENT.
8. ADDITIONAL EROSION CONTROL MEASURES MAY BE REQUIRED AS SITE DEVELOPMENT PROGRESSES. CONTRACTOR TO PROVIDE ALL ADDITIONAL EROSION CONTROL FEATURES TO PREVENT SEDIMENT FROM LEAVING THE SITE.
9. CONTRACTOR IS RESPONSIBLE FOR REMOVING SEDIMENTS FROM THE MUNICIPAL ROADWAY AND SIDEWALKS AT THE END OF EACH WORK DAY.
10. ALL EROSION CONTROL STRUCTURES TO REMAIN IN PLACE UNTIL ALL DISTURBED GROUND SURFACES HAVE BEEN RE-STABILIZED EITHER BY PAVING OR RESTORATION OF VEGETATIVE GROUND COVER.
11. CONTRACTOR TO MINIMIZE EXTENT OF DISTURBED AREA AND DURATION OF EXPOSURE. STABILIZE/PROTECT DISTURBED AREA AS SOON AS POSSIBLE.
12. CONTRACTOR TO MONITOR THE SITE DEVELOPMENT TO ENSURE ALL EROSION CONTROLS ARE INSTALLED AND MAINTAINED TO MUNICIPAL REQUIREMENTS.
13. CONTRACTOR TO COMPLY WITH THE ENGINEER'S INSTRUCTIONS TO INSTALL, MODIFY OR MAINTAIN EROSION CONTROL WORKS.
14. EROSION CONTROL STRUCTURES TO BE MONITORED REGULARLY BY IBI GROUP AND ANY DAMAGE REPAIRED IMMEDIATELY. CONTRACTOR WILL REMOVE SEDIMENTS WHEN ACCUMULATIONS REACH A MAXIMUM OF 1/3 THE HEIGHT OF THE STRUCTURE. (I.E. FENCE)
15. SEE DETAIL PAGE FOR FURTHER INFO FOR SEDIMENT CONTROL MEASURES.
16. SEE STORMWATER MANAGEMENT REPORT PREPARED BY IBI GROUP(IBI PROJECT NO. 32529) FOR FURTHER INFO ON EROSION AND SEDIMENT CONTROLS.
17. ALL DISTURBED GROUND LEFT INACTIVE SHALL BE STABILIZED BY SEEDING, SODDING, MULCHING OR COVERING, OR OTHER EQUIVALENT CONTROL MEASURE. THE PERIOD OF TIME OF INACTIVITY SHALL NOT EXCEED 30 DAYS, UNLESS OTHERWISE AUTHORIZED BY THE DIRECTOR OF PUBLIC WORKS AND ENGINEERING.
18. CONSTRUCTION ACCESS ROUTES SHALL BE CLEARED OF MUD AND DUST DAILY.
19. INTERNAL AND EXTERNAL ROADS TO BE SCRAPED, FLUSHED AND SWEPT TWICE WEEKLY. THIS WORK SHALL BE COMPLETED EVERY TUESDAY AND FRIDAY OF EACH WEEK AND CONTINUE UNTIL ALL LOTS ARE SODDED.





TYPICAL SWALE X-SECTION
N.T.S.



NOTES:
1. ALL MATERIAL TO MEET TERRAFIX SPECIFICATIONS.
2. TEMPORARY SILT SOCK SHOULD BE USED IN AREAS THAT DRAIN 4.0 ha. OR LESS
3. SEDIMENT SHOULD BE REMOVED FROM BEHIND TEMPORARY SILT SOCK ONCE THE ACCUMULATED HEIGHT HAS REACHED HALF THE HEIGHT OF THE SILT SOCK.
4. SILT SOCK CAN BE DIRECT SEEDED AT THE TIME OF INSTALLATION.

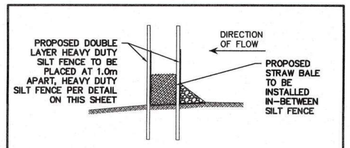
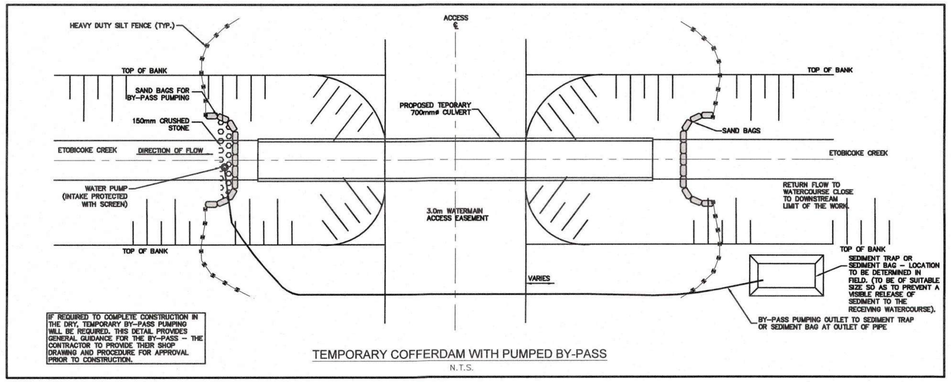
GRASSED AREAS N.T.S.



DOUBLE LAYER SILT FENCE WITH STRAW BALE

N.T.S.



TEMPORARY COFFERDAM WITH PUMPED BY-PASS

N.T.S.

SILTATION AND EROSION CONTROL

A. SILTATION CONTROL BARRIERS SHALL BE PLACED AS DETAILED.
B. ALL SILTATION CONTROL MEASURES SHALL BE CLEANED AND MAINTAINED AFTER EACH RAINFALL AS DIRECTED AND TO THE SATISFACTION OF THE TOWN OF CALEDON.
C. ADDITIONAL SILT CONTROL LOCATIONS MAY BE REQUIRED AS DETERMINED BY THE TOWN OF CALEDON.

IMPORTANT NOTE:

IN THE EVENT THAT THE APPROVED EROSION AND SEDIMENT CONTROLS AND STORMWATER MANAGEMENT FACILITIES ARE NOT EFFECTIVELY CONTROLLING SEDIMENT RELEASE INTO THE NATURAL ENVIRONMENT, THE PROJECT MANAGER OR SITE SUPERVISOR WILL IMMEDIATELY UPGRADE CONTROLS TO RECTIFY THE SITUATION.

EROSION AND SEDIMENT CONTROL NOTES:

FOLLOWING ARE THE MINIMUM OR "GOOD HOUSEKEEPING" REQUIREMENTS, TO ACHIEVE EROSION CONTROL DURING THE CONSTRUCTION PERIOD. THE MEASURES WILL BE INSPECTED PERIODICALLY BY MUNICIPAL STAFF. IT IS THE RESPONSIBILITY OF THE DEVELOPER/GENERAL CONTRACTOR TO ASSURE THEIR CONTINUED EFFECTIVENESS THROUGHOUT CONSTRUCTION.

1. PROVIDE GRAVEL ENTRANCE WHEREVER EQUIPMENT LEAVES THE SITE TO PREVENT MUD TRACKING ONTO PAVED SURFACES. GRAVEL BED SHALL BE A MINIMUM OF 30m LONG, 6m WIDE AND 0.45m DEEP AND SHALL CONSIST OF COARSE (2" CRUSHER-RUN LIMESTONE) MATERIAL. MAINTAIN GRAVEL ENTRANCE IN CLEAN CONDITION.
2. COVER ALL CATCHBASINS WITH 6mm STEEL PLATE THAT IS FIRMLY SECURED TO THE CB GRATING WITH CLAMPS, SCREWS OR WIRES. COVER TO REMAIN IN PLACE UNTIL ROUGH PAVING IS COMPLETED. MAINTAIN GOOD HOUSEKEEPING TO PREVENT WATERBORNE SEDIMENT FROM ENTERING THE STORM SEWER SYSTEM. IF THE CB'S MUST BE USED FOR SITE DRAINAGE DURING CONSTRUCTION, THEY ARE EACH TO BE SURROUNDED BY A STRAW BALE SILT-TRAP.
3. DO NOT LOCATE TOPSOIL PILES AND EXCAVATION MATERIAL CLOSER THAN 2.5m FROM ANY PAVED SURFACE, OR ONE WHICH IS TO BE PAVED BEFORE THE PILE IS REMOVED. ALL TOPSOIL PILES TO BE SEEDED IF THEY ARE TO REMAIN ON-SITE LONG ENOUGH FOR SEEDS TO GROW (LONGER THAN ONE MONTH).
4. CONTROL WIND-BLOWN DUST OFF-SITE TO ACCEPTABLE LEVELS, BY SEEDING TOPSOIL PILES AND OTHER AREAS TEMPORARILY, AND/OR WATERING, AS REQUIRED.
5. TEMPORARY SOIL STOCKPILES SHOULD BE PLACED AWAY FROM ALL WATERCOURSES.
6. SILT FENCE & SEDIMENT TRAP TO BE CLEANED PERIODICALLY AS REQUIRED.

DURING CONSTRUCTION:

1. STONE JACKET TO BE WRAPPED IN FILTER CLOTH.
2. FILTER CLOTH WRAPPING ON STONE JACKET TO BE INSPECTED AFTER EACH RAINFALL EVENT AND REPLACED IF CLOGGED.
3. ACCUMULATED SEDIMENT TO BE REMOVED AS REQUIRED.
4. AT COMPLETION OF CONSTRUCTION:
   - ACCUMULATED SEDIMENT TO BE REMOVED AND DISPOSED OFFSITE.
   - FILTER CLOTH TO BE REMOVED FROM STONE JACKET.
   - TOPSOIL, SEED AND PLANT AS PER SPECIFICATIONS.

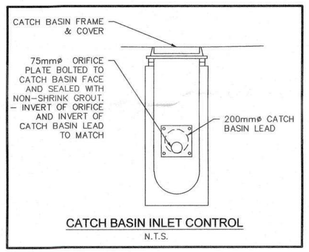
SEQUENCE OF CONSTRUCTION TO BE AS FOLLOWS:

1. SILT TRAPS ARE TO BE INSTALLED ON ALL CATCH BASINS. REGULAR INSPECTION IS REQUIRED & SEDIMENT MUST BE CLEANED OUT AND PROPERLY DISPOSED OF BEFORE ACCUMULATION REACHES 50% OF TRAP HEIGHT.
2. THE TEMPORARY SEDIMENT CONTROL STRUCTURE & OUTLET CAN BE REMOVED ONCE THE PERMANENT STORM SEWER OUTFALL HAS BEEN INSTALLED.
3. ALL SEDIMENT CONTROLS TO BE REMOVED AND STORM SEWER LAYOUT TO BE FLUSHED CLEAN ONCE CONSTRUCTION IS COMPLETE. SEDIMENT TO BE REMOVED FROM PERMANENT SWM FACILITY, AND PROPERLY DISPOSED OFF SIDE.
4. POND TO BE FINE GRADED AND PLANTING COMPLETED IN ACCORDANCE WITH LANDSCAPE DRAWINGS.
5. SILT FENCE & SEDIMENT TRAP TO BE CLEANED PERIODICALLY AS REQUIRED.
6. ALL SILT FENCE & SEDIMENT TRAPS ARE TO BE REMOVED WHEN CONSTRUCTION IS COMPLETED. THE REMAINING SEDIMENT IS TO BE GRADED, PREPARED AND SEEDED OR SODDED.

SOIL STABILIZATION:

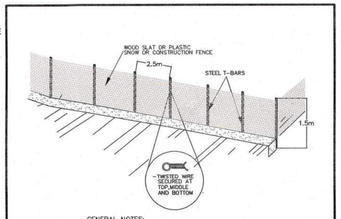
1. STABILIZE DISTURBED GROUND AND STOCKPILES BY SEEDING, SODDING, MULCHING, COVERING, OR OTHER ACCEPTABLE CONTROL MEASURES, IF GROUND IS INACTIVE FOR THIRTY(30) DAYS. (SEE TRCA ESC GUIDELINES FOR DETAILS)

* THE EROSION AND SEDIMENT CONTROL (ESC) STRATEGIES OUTLINED ON THE PLANS ARE NOT STATIC AND MAY NEED TO BE UPGRADED/AMENDED AS SITE CONDITIONS CHANGE TO PREVENT SEDIMENT RELEASES TO THE NATURAL ENVIRONMENT. FAILED ESC MEASURES SHOULD BE REPAIRED WITHIN 48 HOURS.



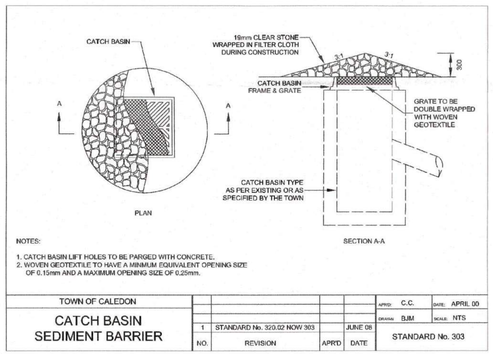
CATCH BASIN INLET CONTROL

N.T.S.



GENERAL NOTES:
1. SPLICING DETAIL:
LAY TOGETHER END STAY WIRES OF EACH OF THE TWO SECTIONS TO BE SPLICED, THEN WRAP THE OVERHANGING ENDS TIGHTLY AROUND LINE WIRE WITH PLIERS OR SPLICING TOOL. CUT AWAY IF NECESSARY TO ALLOW SUFFICIENT LENGTH FOR SPLICING.

SEPARATION FENCE DETAIL



NOTES:
1. CATCH BASIN LIFT HOLES TO BE PARGED WITH CONCRETE.
2. WOVEN GEOTEXTILE TO HAVE A MINIMUM EQUIVALENT OPENING SIZE OF 0.15mm AND A MAXIMUM OPENING SIZE OF 0.25mm.

TITLE:
SPEIRS GIFFEN AVENUE - PH 2
MAYFIELD WEST INDUSTRIAL LANDS

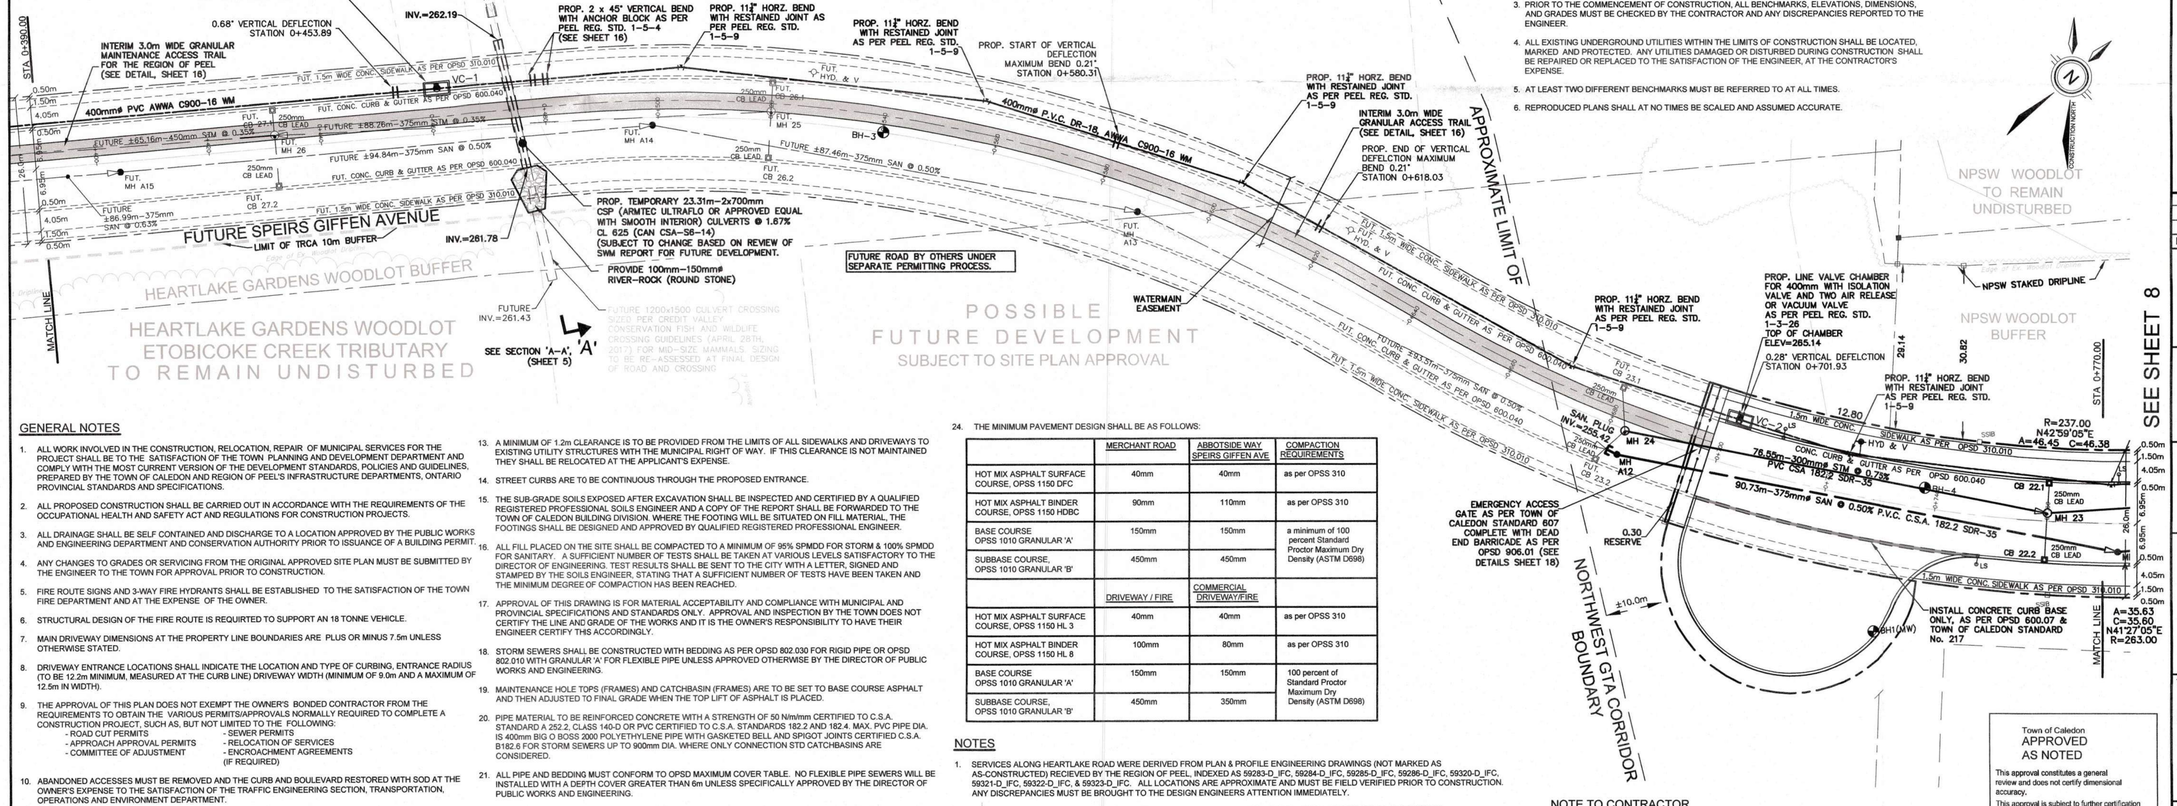
SERVICING PLAN
(0+000.00 - 0+770.00)

DATE:	2018-06-08	DESIGNED BY:	M.E.S.
SCALE:	1:500	DRAWN BY:	M.E.S.
		CHECKED BY:	J.P./D.R.
FILE NO.	116965	REG OF PEEL PROJECT NO.	C-06-302
8 of 35		DWG NO.	116965-SER1



GENERAL NOTES

1. ALL WORK INVOLVED IN THE CONSTRUCTION, RELOCATION, REPAIR OF MUNICIPAL SERVICES FOR THE PROJECT SHALL BE TO THE SATISFACTION OF THE TOWN PLANNING AND DEVELOPMENT DEPARTMENT AND COMPLY WITH THE MOST CURRENT VERSION OF THE DEVELOPMENT STANDARDS, POLICIES AND GUIDELINES, PREPARED BY THE TOWN OF CALEDON AND REGION OF PEEL'S INFRASTRUCTURE DEPARTMENTS, ONTARIO PROVINCIAL STANDARDS AND SPECIFICATIONS.
2. ALL PROPOSED CONSTRUCTION SHALL BE CARRIED OUT IN ACCORDANCE WITH THE REQUIREMENTS OF THE OCCUPATIONAL HEALTH AND SAFETY ACT AND REGULATIONS FOR CONSTRUCTION PROJECTS.
3. ALL DRAINAGE SHALL BE SELF CONTAINED AND DISCHARGE TO A LOCATION APPROVED BY THE PUBLIC WORKS AND ENGINEERING DEPARTMENT AND CONSERVATION AUTHORITY PRIOR TO ISSUANCE OF A BUILDING PERMIT.
4. ANY CHANGES TO GRADES OR SERVICING FROM THE ORIGINAL APPROVED SITE PLAN MUST BE SUBMITTED BY THE ENGINEER TO THE TOWN FOR APPROVAL PRIOR TO CONSTRUCTION.
5. FIRE ROUTE SIGNS AND 3-WAY FIRE HYDRANTS SHALL BE ESTABLISHED TO THE SATISFACTION OF THE TOWN FIRE DEPARTMENT AND AT THE EXPENSE OF THE OWNER.
6. STRUCTURAL DESIGN OF THE FIRE ROUTE IS REQUIRED TO SUPPORT AN 18 TONNE VEHICLE.
7. MAIN DRIVEWAY DIMENSIONS AT THE PROPERTY LINE BOUNDARIES ARE PLUS OR MINUS 7.5m UNLESS OTHERWISE STATED.
8. DRIVEWAY ENTRANCE LOCATIONS SHALL INDICATE THE LOCATION AND TYPE OF CURBING, ENTRANCE RADIUS (TO BE 12.2m MINIMUM, MEASURED AT THE CURB LINE) DRIVEWAY WIDTH (MINIMUM OF 9.0m AND A MAXIMUM OF 12.5m IN WIDTH).
9. THE APPROVAL OF THIS PLAN DOES NOT EXEMPT THE OWNER'S BONDED CONTRACTOR FROM THE REQUIREMENTS TO OBTAIN THE VARIOUS PERMITS/APPROVALS NORMALLY REQUIRED TO COMPLETE A CONSTRUCTION PROJECT, SUCH AS, BUT NOT LIMITED TO THE FOLLOWING:
   - ROAD CUT PERMITS
   - APPROACH APPROVAL PERMITS
   - COMMITTEE OF ADJUSTMENT
   - SEWER PERMITS
   - RELOCATION OF SERVICES
   - ENCROACHMENT AGREEMENTS (IF REQUIRED)
10. ABANDONED ACCESSES MUST BE REMOVED AND THE CURB AND BOULEVARD RESTORED WITH SOD AT THE OWNER'S EXPENSE TO THE SATISFACTION OF THE TRAFFIC ENGINEERING SECTION, TRANSPORTATION, OPERATIONS AND ENVIRONMENT DEPARTMENT.
11. 3 METRE BY 3 METRE VISIBILITY TRIANGLES IN WHICH THE MAXIMUM HEIGHT OF ANY OBJECTS OR MATURE VEGETATION IS NOT TO EXCEED A HEIGHT OF 0.60 METRES ABOVE THE CORRESPONDING PERPENDICULAR CENTRELINE ELEVATION OF THE ADJACENT STREET.
12. SEDIMENT CONTROL DEVICES AND MEASURES TO BE INSTALLED PRIOR TO ANY CONSTRUCTION ON THE SITE AND SHALL BE MAINTAINED THROUGHOUT THE CONSTRUCTION PERIOD TO THE SATISFACTION OF THE TOWN AND APPLICABLE CONSERVATION AUTHORITIES.
13. A MINIMUM OF 1.2m CLEARANCE IS TO BE PROVIDED FROM THE LIMITS OF ALL SIDEWALKS AND DRIVEWAYS TO EXISTING UTILITY STRUCTURES WITH THE MUNICIPAL RIGHT OF WAY. IF THIS CLEARANCE IS NOT MAINTAINED THEY SHALL BE RELOCATED AT THE APPLICANT'S EXPENSE.
14. STREET CURBS ARE TO BE CONTINUOUS THROUGH THE PROPOSED ENTRANCE.
15. THE SUB-GRADE SOILS EXPOSED AFTER EXCAVATION SHALL BE INSPECTED AND CERTIFIED BY A QUALIFIED REGISTERED PROFESSIONAL SOILS ENGINEER AND A COPY OF THE REPORT SHALL BE FORWARDED TO THE TOWN OF CALEDON BUILDING DIVISION. WHERE THE FOOTING WILL BE SITUATED ON FILL MATERIAL, THE FOOTINGS SHALL BE DESIGNED AND APPROVED BY QUALIFIED REGISTERED PROFESSIONAL ENGINEER.
16. ALL FILL PLACED ON THE SITE SHALL BE COMPACTED TO A MINIMUM OF 95% SPMDD FOR STORM & 100% SPMDD FOR SANITARY. A SUFFICIENT NUMBER OF TESTS SHALL BE TAKEN AT VARIOUS LEVELS SATISFACTORY TO THE DIRECTOR OF ENGINEERING. TEST RESULTS SHALL BE SENT TO THE CITY WITH A LETTER, SIGNED AND STAMPED BY THE SOILS ENGINEER, STATING THAT A SUFFICIENT NUMBER OF TESTS HAVE BEEN TAKEN AND THE MINIMUM DEGREE OF COMPACTION HAS BEEN REACHED.
17. APPROVAL OF THIS DRAWING IS FOR MATERIAL ACCEPTABILITY AND COMPLIANCE WITH MUNICIPAL AND PROVINCIAL SPECIFICATIONS AND STANDARDS ONLY. APPROVAL AND INSPECTION BY THE TOWN DOES NOT CERTIFY THE LINE AND GRADE OF THE WORKS AND IT IS THE OWNER'S RESPONSIBILITY TO HAVE THEIR ENGINEER CERTIFY THIS ACCORDINGLY.
18. STORM SEWERS SHALL BE CONSTRUCTED WITH BEDDING AS PER OPSD 802.030 FOR RIGID PIPE OR OPSD 802.010 WITH GRANULAR 'A' FOR FLEXIBLE PIPE UNLESS APPROVED OTHERWISE BY THE DIRECTOR OF PUBLIC WORKS AND ENGINEERING.
19. MAINTENANCE HOLE TOPS (FRAMES) AND CATCHBASIN (FRAMES) ARE TO BE SET TO BASE COURSE ASPHALT AND THEN ADJUSTED TO FINAL GRADE WHEN THE TOP LIFT OF ASPHALT IS PLACED.
20. PIPE MATERIAL TO BE REINFORCED CONCRETE WITH A STRENGTH OF 50 N/m/mm CERTIFIED TO C.S.A. STANDARD A 252.2, CLASS 140-D OR PVC CERTIFIED TO C.S.A. STANDARDS 182.2 AND 182.4. MAX. PVC PIPE DIA. IS 400mm BIG O BOSS 2000 POLYETHYLENE PIPE WITH GASKETED BELL AND SP/GOT JOINTS CERTIFIED C.S.A. B182.6 FOR STORM SEWERS UP TO 900mm DIA. WHERE ONLY CONNECTION STD CATCHBASINS ARE CONSIDERED.
21. ALL PIPE AND BEDDING MUST CONFORM TO OPSD MAXIMUM COVER TABLE. NO FLEXIBLE PIPE SEWERS WILL BE INSTALLED WITH A DEPTH COVER GREATER THAN 6m UNLESS SPECIFICALLY APPROVED BY THE DIRECTOR OF PUBLIC WORKS AND ENGINEERING.
22. ALL PIPE HANDLING INSTRUCTIONS MUST BE IN STRICT COMPLIANCE WITH MANUFACTURERS INSTALLATION GUIDES AND THE OCPA OR UNIBELL GUIDELINES.
23. ALL BOULEVARDS TO BE RESTORED WITH 300mm MINIMUM OF TOPSOIL AND SOD.
24. THE MINIMUM PAVEMENT DESIGN SHALL BE AS FOLLOWS:

	MERCHANT ROAD	ABBOTSIDE WAY SPEIRS GIFFEN AVE	COMPACTION REQUIREMENTS
HOT MIX ASPHALT SURFACE COURSE, OPSS 1150 DFC	40mm	40mm	as per OPSS 310
HOT MIX ASPHALT BINDER COURSE, OPSS 1150 HDBC	90mm	110mm	as per OPSS 310
BASE COURSE OPSS 1010 GRANULAR 'A'	150mm	150mm	a minimum of 100 percent Standard Proctor Maximum Dry Density (ASTM D698)
SUBBASE COURSE, OPSS 1010 GRANULAR 'B'	450mm	450mm

NOTES

1. SERVICES ALONG HEARTLAKE ROAD WERE DERIVED FROM PLAN & PROFILE ENGINEERING DRAWINGS (NOT MARKED AS AS-CONSTRUCTED) RECIEVED BY THE REGION OF PEEL, INDEXED AS 59283-D_IFC, 59284-D_IFC, 59285-D_IFC, 59320-D_IFC, 59321-D_IFC, 59322-D_IFC, & 59323-D_IFC. ALL LOCATIONS ARE APPROXIMATE AND MUST BE FIELD VERIFIED PRIOR TO CONSTRUCTION. ANY DISCREPANCIES MUST BE BROUGHT TO THE DESIGN ENGINEERS ATTENTION IMMEDIATELY.
2. EXISTING SERVICES ALONG MERCHANT ROAD AND ABBOTSIDE WAY WERE DERIVED FROM IBI GROUP'S PLAN & PROFILE AS-CONSTRUCTED ENGINEERING DRAWINGS INDEXED AS 30969-PP1 TO 30969-PP5 (INCLUSIVE). ALL LOCATIONS ARE APPROXIMATE AND MUST BE FIELD VERIFIED PRIOR TO CONSTRUCTION. ANY DISCREPANCIES MUST BE BROUGHT TO THE DESIGN ENGINEERS ATTENTION IMMEDIATELY.
3. SERVICES ALONG DIXIE ROAD WERE DERIVED FROM PLAN & PROFILE ENGINEERING DRAWINGS (NOT MARKED AS AS-CONSTRUCTED) RECEIVED BY THE REGION OF PEEL, INDEXED AS 58322-D_WMN_SMN_INSP, 62161-D_IFC, AND 20551-D. ALL LOCATIONS ARE APPROXIMATE AND MUST BE FIELD VERIFIED PRIOR TO CONSTRUCTION. ANY DISCREPANCIES MUST BE BROUGHT TO THE DESIGN ENGINEERS ATTENTION IMMEDIATELY.

BEFORE STARTING WORK

1. THE CONTRACTOR SHALL NOTIFY THE TOWN OF CALEDON AND IBI GROUP AT LEAST 48 HOURS PRIOR TO COMMENCING CONSTRUCTION WITHIN THE MUNICIPALITY RIGHT OF WAY. THE CONTRACTOR MUST CONTACT THE FOLLOWING:
   - THE TOWN OF CALEDON FINANCE & INFRASTRUCTURE (905)-584-2272
   - THE REGION OF PEEL
   - HYDRO ONE
   - ROGERS CABLE
   - EMBRIDGE CONSUMERS GAS
   - BELL CANADA
   - FIRE AND EMERGENCY SERVICES.
2. THE POSITION OF THE POLE LINES, CONDUITS, WATERMAINS, SEWERS, AND OTHER UTILITIES AND STRUCTURES ARE NOT NECESSARILY SHOWN ON THE CONTRACT DRAWINGS, AND WHERE SHOWN, THE ACCURACY OF THE POSITION OF SUCH UTILITIES AND STRUCTURES IS NOT GUARANTEED.
3. PRIOR TO THE COMMENCEMENT OF CONSTRUCTION, ALL BENCHMARKS, ELEVATIONS, DIMENSIONS, AND GRADES MUST BE CHECKED BY THE CONTRACTOR AND ANY DISCREPANCIES REPORTED TO THE ENGINEER.
4. ALL EXISTING UNDERGROUND UTILITIES WITHIN THE LIMITS OF CONSTRUCTION SHALL BE LOCATED, MARKED AND PROTECTED. ANY UTILITIES DAMAGED OR DISTURBED DURING CONSTRUCTION SHALL BE REPAIRED OR REPLACED TO THE SATISFACTION OF THE ENGINEER, AT THE CONTRACTOR'S EXPENSE.
5. AT LEAST TWO DIFFERENT BENCHMARKS MUST BE REFERRED TO AT ALL TIMES.
6. REPRODUCED PLANS SHALL AT NO TIMES BE SCALED AND ASSUMED ACCURATE.

FUTURE SERVICES NOTE:

FUTURE SERVICES ARE APPROXIMATE AND SUBJECT TO CHANGE IN THE FINAL DETAIL DESIGN OF THE WEST HALF OF SPEIRS GIFFEN AVENUE.

ROAD CROSS SECTION:

FOR TOWN OF CALEDON STANDARD ROAD CROSS SECTION DETAIL, PLEASE REFER TO TOWN OF CALEDON STANDARD No. 211 ON SHEETS 8 AND 9.

NOTE TO CONTRACTOR

THE POSITION OF POLE LINES, CONDUITS, WATERMAINS, SEWERS AND OTHER UNDERGROUND AND OVERGROUND UTILITIES AND STRUCTURES ARE NOT NECESSARILY SHOWN ON THIS CONTRACT DRAWING, AND WHERE SHOWN, THE ACCURACY OF THE POSITION OF SUCH UTILITIES IS NOT GUARANTEED. BEFORE STARTING WORK THE CONTRACTOR SHALL INFORM THEMSELVES OF THE EXACT LOCATION OF ALL SUCH UTILITIES AND STRUCTURES AND SHALL ASSUME ALL LIABILITY FOR DAMAGE TO THEM.

Town of Caledon
APPROVED AS NOTED

This approval constitutes a general review and does not certify dimensional accuracy.

This approval is subject to further certification of the "as recorded" works by a Professional Engineer of the Province of Ontario.

GENERAL NOTES

1. ALL WORK INVOLVED IN THE CONSTRUCTION, RELOCATION, REPAIR OF MUNICIPAL SERVICES FOR THE PROJECT SHALL BE TO THE SATISFACTION OF THE TOWN PLANNING AND DEVELOPMENT DEPARTMENT AND COMPLY WITH THE MOST CURRENT VERSION OF THE DEVELOPMENT STANDARDS, POLICIES AND GUIDELINES, PREPARED BY THE TOWN OF CALEDON AND REGION OF PEEL'S INFRASTRUCTURE DEPARTMENTS, ONTARIO PROVINCIAL STANDARDS AND SPECIFICATIONS.
2. ALL PROPOSED CONSTRUCTION SHALL BE CARRIED OUT IN ACCORDANCE WITH THE REQUIREMENTS OF THE OCCUPATIONAL HEALTH AND SAFETY ACT AND REGULATIONS FOR CONSTRUCTION PROJECTS.
3. ALL DRAINAGE SHALL BE SELF CONTAINED AND DISCHARGE TO A LOCATION APPROVED BY THE PUBLIC WORKS AND ENGINEERING DEPARTMENT AND CONSERVATION AUTHORITY PRIOR TO ISSUANCE OF A BUILDING PERMIT.
4. ANY CHANGES TO GRADES OR SERVICING FROM THE ORIGINAL APPROVED SITE PLAN MUST BE SUBMITTED BY THE ENGINEER TO THE TOWN FOR APPROVAL PRIOR TO CONSTRUCTION.
5. FIRE ROUTE SIGNS AND 3-WAY FIRE HYDRANTS SHALL BE ESTABLISHED TO THE SATISFACTION OF THE TOWN FIRE DEPARTMENT AND AT THE EXPENSE OF THE OWNER.
6. STRUCTURAL DESIGN OF THE FIRE ROUTE IS REQUIRTED TO SUPPORT AN 18 TONNE VEHICLE.
7. MAIN DRIVEWAY DIMENSIONS AT THE PROPERTY LINE BOUNDARIES ARE PLUS OR MINUS 7.5m UNLESS OTHERWISE STATED.
8. DRIVEWAY ENTRANCE LOCATIONS SHALL INDICATE THE LOCATION AND TYPE OF CURBING, ENTRANCE RADIUS (TO BE 12.2m MINIMUM, MEASURED AT THE CURB LINE) DRIVEWAY WIDTH (MINIMUM OF 9.0m AND A MAXIMUM OF 12.5m IN WIDTH).
9. THE APPROVAL OF THIS PLAN DOES NOT EXEMPT THE OWNER'S BONDED CONTRACTOR FROM THE REQUIREMENTS TO OBTAIN THE VARIOUS PERMITS/APPROVALS NORMALLY REQUIRED TO COMPLETE A CONSTRUCTION PROJECT, SUCH AS, BUT NOT LIMITED TO THE FOLLOWING:
   - ROAD CUT PERMITS
   - APPROACH APPROVAL PERMITS
   - COMMITTEE OF ADJUSTMENT
   - SEWER PERMITS
   - RELOCATION OF SERVICES
   - ENCROACHMENT AGREEMENTS (IF REQUIRED)
10. ABANDONED ACCESSES MUST BE REMOVED AND THE CURB AND BOULEVARD RESTORED WITH SOD AT THE OWNER'S EXPENSE TO THE SATISFACTION OF THE TOWN OF CALEDON, TRANSPORTATION, OPERATIONS AND ENVIRONMENT DEPARTMENT.
11. 3 METRE BY 3 METRE VISIBILITY TRIANGLES IN WHICH THE MAXIMUM HEIGHT OF ANY OBJECTS OR MATURE VEGETATION IS NOT TO EXCEED A HEIGHT OF 0.60 METRES ABOVE THE CORRESPONDING PERPENDICULAR CENTRELINE ELEVATION OF THE ADJACENT STREET.
12. SEDIMENT CONTROL DEVICES AND MEASURES TO BE INSTALLED PRIOR TO ANY CONSTRUCTION ON THE SITE AND SHALL BE MAINTAINED THROUGHOUT THE CONSTRUCTION PERIOD TO THE SATISFACTION OF THE TOWN AND APPLICABLE CONSERVATION AUTHORITIES.
13. A MINIMUM OF 1.2m CLEARANCE IS TO BE PROVIDED FROM THE LIMITS OF ALL SIDEWALKS AND DRIVEWAYS TO EXISTING UTILITY STRUCTURES WITH THE MUNICIPAL RIGHT OF WAY. IF THIS CLEARANCE IS NOT MAINTAINED THEY SHALL BE RELOCATED AT THE APPLICANT'S EXPENSE.
14. STREET CURBS ARE TO BE CONTINUOUS THROUGH THE PROPOSED ENTRANCE.
15. THE SUB-GRADE SOILS EXPOSED AFTER EXCAVATION SHALL BE INSPECTED AND CERTIFIED BY A QUALIFIED REGISTERED PROFESSIONAL SOILS ENGINEER AND A COPY OF THE REPORT SHALL BE FORWARDED TO THE TOWN OF CALEDON BUILDING DIVISION. WHERE THE FOOTING WILL BE SITUATED ON FILL MATERIAL, THE FOOTINGS SHALL BE DESIGNED AND APPROVED BY QUALIFIED REGISTERED PROFESSIONAL ENGINEER.
16. ALL FILL PLACED ON THE SITE SHALL BE COMPACTED TO A MINIMUM OF 95% SPMDD FOR STORM & 100% SPMDD FOR SANITARY. A SUFFICIENT NUMBER OF TESTS SHALL BE TAKEN AT VARIOUS LEVELS SATISFACTORY TO THE DIRECTOR OF ENGINEERING. TEST RESULTS SHALL BE SENT TO THE CITY WITH A LETTER, SIGNED AND STAMPED BY THE SOILS ENGINEER, STATING THAT A SUFFICIENT NUMBER OF TESTS HAVE BEEN TAKEN AND THE MINIMUM DEGREE OF COMPACTION HAS BEEN REACHED.
17. APPROVAL OF THIS DRAWING IS FOR MATERIAL ACCEPTABILITY AND COMPLIANCE WITH MUNICIPAL AND PROVINCIAL SPECIFICATIONS AND STANDARDS ONLY. APPROVAL AND INSPECTION BY THE TOWN DOES NOT CERTIFY THE LINE AND GRADE OF THE WORKS AND IT IS THE OWNER'S RESPONSIBILITY TO HAVE THEIR ENGINEER CERTIFY THIS ACCORDINGLY.
18. STORM SEWERS SHALL BE CONSTRUCTED WITH BEDDING AS PER OPSD 802.030 FOR RIGID PIPE OR OPSD 802.010 WITH GRANULAR 'A' FOR FLEXIBLE PIPE UNLESS APPROVED OTHERWISE BY THE DIRECTOR OF PUBLIC WORKS AND ENGINEERING.
19. MAINTENANCE HOLE TOPS (FRAMES) AND CATCHBASIN (FRAMES) ARE TO BE SET TO BASE COURSE ASPHALT AND THEN ADJUSTED TO FINAL GRADE WHEN THE TOP LIFT OF ASPHALT IS PLACED.
20. PIPE MATERIAL TO BE REINFORCED CONCRETE WITH A STRENGTH OF 50 N/m/mm CERTIFIED TO C.S.A. STANDARD A 252.2, CLASS 140-D OR PVC CERTIFIED TO C.S.A. STANDARDS 182.2 AND 182.4. MAX. PVC PIPE DIA. IS 400mm BIG O BOSS 2000 POLYETHYLENE PIPE WITH GASKETED BELL AND SPIGOT JOINTS CERTIFIED C.S.A. B182.6 FOR STORM SEWERS UP TO 900mm DIA. WHERE ONLY CONNECTION STD CATCHBASINS ARE CONSIDERED.
21. ALL PIPE AND BEDDING MUST CONFORM TO OPSD MAXIMUM COVER TABLE. NO FLEXIBLE PIPE SEWERS WILL BE INSTALLED WITH A DEPTH COVER GREATER THAN 6m UNLESS SPECIFICALLY APPROVED BY THE DIRECTOR OF PUBLIC WORKS AND ENGINEERING.
22. ALL PIPE HANDLING INSTRUCTIONS MUST BE IN STRICT COMPLIANCE WITH MANUFACTURERS INSTALLATION GUIDES AND THE OCPA OR UNIBELL GUIDELINES.
23. ALL BOULEVARDS TO BE RESTORED WITH 300mm MINIMUM OF TOPSOIL AND SOD.
24. THE MINIMUM PAVEMENT DESIGN SHALL BE AS FOLLOWS:

	MERCHANT ROAD	ABBOTSIDE WAY SPEIRS GIFFEN AVE	COMPACTION REQUIREMENTS
HOT MIX ASPHALT SURFACE COURSE, OPSS 1150 DFC	40mm	40mm	as per OPSS 310
HOT MIX ASPHALT BINDER COURSE, OPSS 1150 HDBC	90mm	110mm	as per OPSS 310
BASE COURSE OPSS 1010 GRANULAR 'A'	150mm	150mm	a minimum of 100 percent Standard Proctor Maximum Dry Density (ASTM D698)
SUBBASE COURSE, OPSS 1010 GRANULAR 'B'	450mm	450mm	
	DRIVEWAY / FIRE	COMMERCIAL DRIVEWAY/FIRE	
HOT MIX ASPHALT SURFACE COURSE, OPSS 1150 HL 3	40mm	40mm	as per OPSS 310
HOT MIX ASPHALT BINDER COURSE, OPSS 1150 HL 8	100mm	80mm	as per OPSS 310
BASE COURSE OPSS 1010 GRANULAR 'A'	150mm	150mm	100 percent of Standard Proctor Maximum Dry Density (ASTM D698)
SUBBASE COURSE, OPSS 1010 GRANULAR 'B'	450mm	350mm	

BEFORE STARTING WORK

1. THE CONTRACTOR SHALL NOTIFY THE TOWN OF CALEDON AND IBI GROUP AT LEAST 48 HOURS PRIOR TO COMMENCING CONSTRUCTION WITHIN THE MUNICIPALITY RIGHT OF WAY. THE CONTRACTOR MUST CONTACT THE FOLLOWING:
   - THE TOWN OF CALEDON FINANCE & INFRASTRUCTURE (905)-584-2272
   - THE REGION OF PEEL
   - HYDRO ONE
   - ROGERS CABLE
   - ENBRIDGE CONSUMERS GAS
   - BELL CANADA
   - FIRE AND EMERGENCY SERVICES.
2. THE POSITION OF THE POLE LINES, CONDUITS, WATERMAINS, SEWERS, AND OTHER UTILITIES AND STRUCTURES ARE NOT NECESSARILY SHOWN ON THE CONTRACT DRAWINGS, AND WHERE SHOWN, THE ACCURACY OF THE POSITION OF SUCH UTILITIES AND STRUCTURES IS NOT GUARANTEED.
3. PRIOR TO THE COMMENCEMENT OF CONSTRUCTION, ALL BENCHMARKS, ELEVATIONS, DIMENSIONS, AND GRADES MUST BE CHECKED BY THE CONTRACTOR AND ANY DISCREPANCIES REPORTED TO THE ENGINEER.
4. ALL EXISTING UNDERGROUND UTILITIES WITHIN THE LIMITS OF CONSTRUCTION SHALL BE LOCATED, MARKED AND PROTECTED. ANY UTILITIES DAMAGED OR DISTURBED DURING CONSTRUCTION SHALL BE REPAIRED OR REPLACED TO THE SATISFACTION OF THE ENGINEER, AT THE CONTRACTOR'S EXPENSE.
5. AT LEAST TWO DIFFERENT BENCHMARKS MUST BE REFERRED TO AT ALL TIMES.
6. REPRODUCED PLANS SHALL AT NO TIMES BE SCALED AND ASSUMED ACCURATE.

NOTES

1. SERVICES ALONG HEARTLAKE ROAD WERE DERIVED FROM PLAN & PROFILE ENGINEERING DRAWINGS (NOT MARKED AS AS-CONSTRUCTED) RECIEVED BY THE REGION OF PEEL, INDEXED AS 59283-D_IFC, 59284-D_IFC, 59285-D_IFC, 59286-D_IFC, 59320-D_IFC, 59321-D_IFC, 59322-D_IFC, & 59323-D_IFC. ALL LOCATIONS ARE APPROXIMATE AND MUST BE FIELD VERIFIED PRIOR TO CONSTRUCTION. ANY DISCREPANCIES MUST BE BROUGHT TO THE DESIGN ENGINEERS ATTENTION IMMEDIATELY.
2. EXISTING SERVICES ALONG MERCHANT ROAD AND ABBOTSIDE WAY WERE DERIVED FROM IBI GROUP'S PLAN & PROFILE AS-CONSTRUCTED ENGINEERING DRAWINGS INDEXED AS 30969-PP1 TO 30969-PP5 (INCLUSIVE). ALL LOCATIONS ARE APPROXIMATE AND MUST BE FIELD VERIFIED PRIOR TO CONSTRUCTION. ANY DISCREPANCIES MUST BE BROUGHT TO THE DESIGN ENGINEERS ATTENTION IMMEDIATELY.
3. SERVICES ALONG DIXIE ROAD WERE DERIVED FROM PLAN & PROFILE ENGINEERING DRAWINGS (NOT MARKED AS AS-CONSTRUCTED) RECIEVED BY THE REGION OF PEEL, INDEXED AS 58322-D_WMN_SMN_INSP. 62161-D_IFC, AND 20551-D. ALL LOCATIONS ARE APPROXIMATE AND MUST BE FIELD VERIFIED PRIOR TO CONSTRUCTION. ANY DISCREPANCIES MUST BE BROUGHT TO THE DESIGN ENGINEERS ATTENTION IMMEDIATELY.

NOTE TO CONTRACTOR

THE POSITION OF POLE LINES, CONDUITS, WATERMAINS, SEWERS AND OTHER UNDERGROUND AND OVERGROUND UTILITIES AND STRUCTURES ARE NOT NECESSARILY SHOWN ON THIS CONTRACT DRAWING, AND WHERE SHOWN, THE ACCURACY OF THE POSITION OF SUCH UTILITIES IS NOT GUARANTEED. BEFORE STARTING WORK THE CONTRACTOR SHALL INFORM THEMSELVES OF THE EXACT LOCATION OF ALL SUCH UTILITIES AND STRUCTURES AND SHALL ASSUME ALL LIABLITY FOR DAMAGE TO THEM.

FUTURE SERVICES NOTE:
FUTURE SERVICES ARE APPROXIMATE AND SUBJECT TO CHANGE IN THE FINAL DETAIL DESIGN OF THE WEST HALF OF SPEIRS GIFFEN AVENUE.

PROJECT STATISTICS: REGION	PROPOSED		FUTURE	
	THIS SHEET	TOTAL	THIS SHEET	TOTAL
Sanitary Sewer Length	360m	431m	0	685m

GENERAL NOTES

1. ALL WORK INVOLVED IN THE CONSTRUCTION, RELOCATION, REPAIR OF MUNICIPAL SERVICES FOR THE PROJECT SHALL BE TO THE SATISFACTION OF THE TOWN PLANNING AND DEVELOPMENT DEPARTMENT AND COMPLY WITH THE MOST CURRENT VERSION OF THE DEVELOPMENT STANDARDS, POLICIES AND GUIDELINES, PREPARED BY THE TOWN OF CALEDON AND REGION OF PEEL'S INFRASTRUCTURE DEPARTMENTS, ONTARIO PROVINCIAL STANDARDS AND SPECIFICATIONS.
2. ALL PROPOSED CONSTRUCTION SHALL BE CARRIED OUT IN ACCORDANCE WITH THE REQUIREMENTS OF THE OCCUPATIONAL HEALTH AND SAFETY ACT AND REGULATIONS FOR CONSTRUCTION PROJECTS.
3. ALL DRAINAGE SHALL BE SELF CONTAINED AND DISCHARGE TO A LOCATION APPROVED BY THE TOWN AND CONSERVATION AUTHORITY PRIOR TO ISSUANCE OF A BUILDING PERMIT.
4. ANY CHANGES TO GRADES OR SERVICING FROM THE ORIGINAL APPROVED SITE PLAN MUST BE SUBMITTED BY THE ENGINEER TO THE TOWN FOR APPROVAL PRIOR TO CONSTRUCTION.
5. FIRE ROUTE SIGNS AND 3-WAY FIRE HYDRANTS SHALL BE ESTABLISHED TO THE SATISFACTION OF THE CITY FIRE DEPARTMENT AND AT THE EXPENSE OF THE OWNER.
6. STRUCTURAL DESIGN OF THE FIRE ROUTE IS REQUIRTED TO SUPPORT AN 18 TONNE VEHICLE.
7. MAIN DRIVEWAY DIMENSIONS AT THE PROPERTY LINE BOUNDARIES ARE PLUS OR MINUS 7.5m UNLESS OTHERWISE STATED.
8. DRIVEWAY ENTRANCE LOCATIONS SHALL INDICATE THE LOCATION AND TYPE OF CURBING, ENTRANCE RADIUS (TO BE 12.2m MINIMUM, MEASURED AT THE CURB LINE) DRIVEWAY WIDTH (MINIMUM OF 9.0m AND A MAXIMUM OF 12.5m IN WIDTH).
9. THE APPROVAL OF THIS PLAN DOES NOT EXEMPT THE OWNER'S BONDED CONTRACTOR FROM THE REQUIREMENTS TO OBTAIN THE VARIOUS PERMITS/APPROVALS NORMALLY REQUIRED TO COMPLETE A CONSTRUCTION PROJECT, SUCH AS, BUT NOT LIMITED TO THE FOLLOWING:
   - ROAD CUT PERMITS
   - SEWER PERMITS
   - APPROACH APPROVAL PERMITS
   - RELOCATION OF SERVICES
   - COMMITTEE OF ADJUSTMENT
   - ENCROACHMENT AGREEMENTS (IF REQUIRED)
10. ABANDONED ACCESSES MUST BE REMOVED AND THE CURB AND BOULEVARD RESTORED WITH SOD AT THE OWNER'S EXPENSE TO THE SATISFACTION OF THE TOWN.
11. 3 METRE BY 3 METRE VISIBILITY TRIANGLES IN WHICH THE MAXIMUM HEIGHT OF ANY OBJECTS OR MATURE VEGETATION IS NOT TO EXCEED A HEIGHT OF 0.60 METRES ABOVE THE CORRESPONDING PERPENDICULAR CENTRELINE ELEVATION OF THE ADJACENT STREET.
12. SEDIMENT CONTROL DEVICES AND MEASURES TO BE INSTALLED PRIOR TO ANY CONSTRUCTION ON THE SITE AND SHALL BE MAINTAINED THROUGHOUT THE CONSTRUCTION PERIOD TO THE SATISFACTION OF THE TOWN AND APPLICABLE CONSERVATION AUTHORITIES.
13. A MINIMUM OF 1.2m CLEARANCE IS TO BE PROVIDED FROM THE LIMITS OF ALL SIDEWALKS AND DRIVEWAYS TO EXISTING UTILITY STRUCTURES WITH THE MUNICIPAL RIGHT OF WAY. IF THIS CLEARANCE IS NOT MAINTAINED THEY SHALL BE RELOCATED AT THE APPLICANT'S EXPENSE.
14. STREET CURBS ARE TO BE CONTINUOUS THROUGH THE PROPOSED ENTRANCE.
15. THE SUB-GRADE SOILS EXPOSED AFTER EXCAVATION SHALL BE INSPECTED AND CERTIFIED BY A QUALIFIED REGISTERED PROFESSIONAL SOILS ENGINEER AND A COPY OF THE REPORT SHALL BE FORWARDED TO THE TOWN OF CALEDON BUILDING DIVISION. WHERE THE FOOTING WILL BE SITUATED ON FILL MATERIAL, THE FOOTINGS SHALL BE DESIGNED AND APPROVED BY QUALIFIED REGISTERED PROFESSIONAL ENGINEER.
16. ALL FILL PLACED ON THE SITE SHALL BE COMPACTED TO A MINIMUM OF 95% SPMDD FOR STORM & 100% SPMDD FOR SANITARY. A SUFFICIENT NUMBER OF TESTS SHALL BE TAKEN AT VARIOUS LEVELS SATISFACTORY TO THE DIRECTOR OF ENGINEERING. TEST RESULTS SHALL BE SENT TO THE TOWN WITH A LETTER, SIGNED AND STAMPED BY THE SOILS ENGINEER, STATING THAT A SUFFICIENT NUMBER OF TESTS HAVE BEEN TAKEN AND THE MINIMUM DEGREE OF COMPACTION HAS BEEN REACHED.
17. APPROVAL OF THIS DRAWING IS FOR MATERIAL ACCEPTABILITY AND COMPLIANCE WITH MUNICIPAL AND PROVINCIAL SPECIFICATIONS AND STANDARDS ONLY. APPROVAL AND INSPECTION BY THE TOWN DOES NOT CERTIFY THE LINE AND GRADE OF THE WORKS AND IT IS THE OWNER'S RESPONSIBILITY TO HAVE THEIR ENGINEER CERTIFY THIS ACCORDINGLY.
18. STORM SEWERS SHALL BE CONSTRUCTED WITH BEDDING AS PER OPSD 802.030 FOR RIGID PIPE OR OPSD 802.010 WITH GRANULAR 'A' FOR FLEXIBLE PIPE UNLESS APPROVED OTHERWISE BY THE DIRECTOR OF PUBLIC WORKS AND ENGINEERING.
19. MAINTENANCE HOLE TOPS (FRAMES) AND CATCHBASIN (FRAMES) ARE TO BE SET TO BASE COURSE ASPHALT AND THEN ADJUSTED TO FINAL GRADE WHEN THE TOP LIFT OF ASPHALT IS PLACED.
20. PIPE MATERIAL TO BE REINFORCED CONCRETE WITH A STRENGTH OF 50 N/m/mm CERTIFIED TO C.S.A. STANDARD A 252.2, CLASS 140-D OR PVC CERTIFIED TO C.S.A. STANDARDS 182.2 AND 182.4. MAX. PVC PIPE DIA. IS 400mm BIG O BOSS 2000 POLYETHYLENE PIPE WITH GASKETED BELL AND SPIGOT JOINTS CERTIFIED C.S.A. B182.6 FOR STORM SEWERS UP TO 900mm DIA. WHERE ONLY CONNECTION STD CATCHBASINS ARE CONSIDERED.
21. ALL PIPE AND BEDDING MUST CONFORM TO OPSD MAXIMUM COVER TABLE. NO FLEXIBLE PIPE SEWERS WILL BE INSTALLED WITH A DEPTH COVER GREATER THAN 6m UNLESS SPECIFICALLY APPROVED BY THE DIRECTOR OF PUBLIC WORKS AND ENGINEERING.
22. ALL PIPE HANDLING INSTRUCTIONS MUST BE IN STRICT COMPLIANCE WITH MANUFACTURERS INSTALLATION GUIDES AND THE OCPA OR UNIBELL GUIDELINES.
23. ALL BOULEVARDS TO BE RESTORED WITH 300mm MINIMUM OF TOPSOIL AND SOD.
24. THE MINIMUM PAVEMENT DESIGN SHALL BE AS FOLLOWS:

	MERCHANT ROAD	SPEIRS GIFFEN AVE	COMPACTION REQUIREMENTS
HOT MIX ASPHALT SURFACE COURSE, OPSS 1150 DFC	40mm	40mm	as per OPSS 310
HOT MIX ASPHALT BINDER COURSE, OPSS 1150 HDBC	90mm	110mm	as per OPSS 310
BASE COURSE OPSS 1010 GRANULAR 'A'	150mm	150mm	a minimum of 100 percent Standard Proctor Maximum Dry Density (ASTM D698)
SUBBASE COURSE, OPSS 1010 GRANULAR 'B'	450mm	450mm	
	DRIVEWAY / FIRE	COMMERCIAL DRIVEWAY/FIRE	
HOT MIX ASPHALT SURFACE COURSE, OPSS 1150 HL 3	40mm	40mm	as per OPSS 310
HOT MIX ASPHALT BINDER COURSE, OPSS 1150 HL 8	100mm	80mm	as per OPSS 310
BASE COURSE OPSS 1010 GRANULAR 'A'	150mm	150mm	100 percent of Standard Proctor Maximum Dry Density (ASTM D698)
SUBBASE COURSE, OPSS 1010 GRANULAR 'B'	450mm	350mm	

BEFORE STARTING WORK

1. THE CONTRACTOR SHALL NOTIFY THE TOWN OF CALEDON AND IBI GROUP AT LEAST 48 HOURS PRIOR TO COMMENCING CONSTRUCTION WITHIN THE MUNICIPALITY RIGHT OF WAY. THE CONTRACTOR MUST CONTACT THE FOLLOWING:
   - THE TOWN OF CALEDON FINANCE & INFRASTRUCTURE (905)-584-2272
   - THE REGION OF PEEL
   - HYDRO ONE
   - ROGERS CABLE
   - ENBRIDGE CONSUMERS GAS
   - BELL CANADA
   - FIRE AND EMERGENCY SERVICES.
2. THE POSITION OF THE POLE LINES, CONDUITS, WATERMAINS, SEWERS, AND OTHER UTILITIES AND STRUCTURES ARE NOT NECESSARILY SHOWN ON THE CONTRACT DRAWINGS, AND WHERE SHOWN, THE ACCURACY OF THE POSITION OF SUCH UTILITIES AND STRUCTURES IS NOT GUARANTEED.
3. PRIOR TO THE COMMENCEMENT OF CONSTRUCTION, ALL BENCHMARKS, ELEVATIONS, DIMENSIONS, AND GRADES MUST BE CHECKED BY THE CONTRACTOR AND ANY DISCREPANCIES REPORTED TO THE ENGINEER.
4. ALL EXISTING UNDERGROUND UTILITIES WITHIN THE LIMITS OF CONSTRUCTION SHALL BE LOCATED, MARKED AND PROTECTED. ANY UTILITIES DAMAGED OR DISTURBED DURING CONSTRUCTION SHALL BE REPAIRED OR REPLACED TO THE SATISFACTION OF THE ENGINEER, AT THE CONTRACTOR'S EXPENSE.
5. AT LEAST TWO DIFFERENT BENCHMARKS MUST BE REFERRED TO AT ALL TIMES.
6. REPRODUCED PLANS SHALL AT NO TIMES BE SCALED AND ASSUMED ACCURATE.

FUTURE SERVICES NOTE:
FUTURE SERVICES ARE APPROXIMATE AND SUBJECT TO CHANGE IN THE FINAL DETAIL DESIGN OF THE WEST HALF OF SPEIRS GIFFEN AVENUE.

Town of Caledon
APPROVED
AS NOTED

This approval constitutes a general review and does not certify dimensional accuracy.

This approval is subject to further certification of the "as recorded" works by a Professional Engineer of the Province of Ontario.

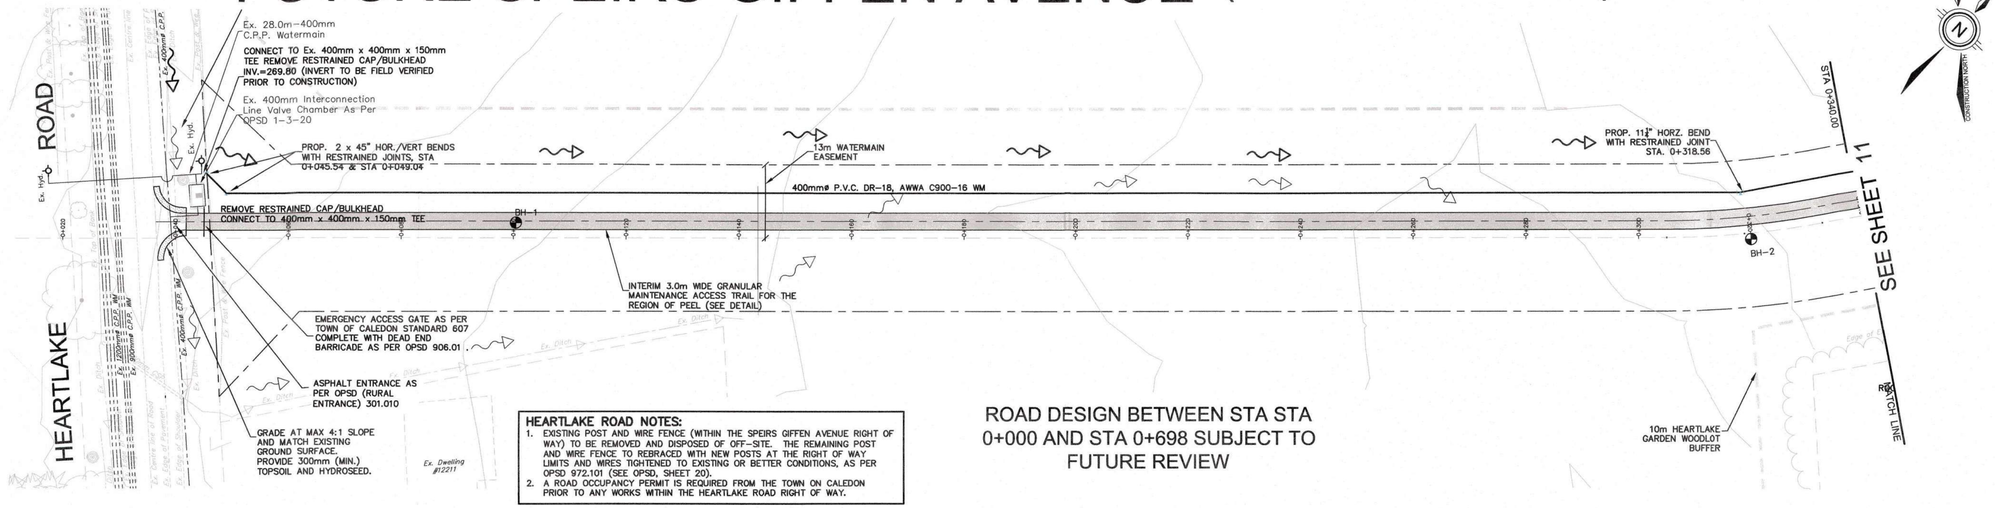
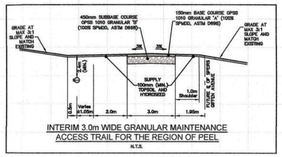
FUTURE SPEIRS GIFFEN AVENUE (0+000.00 - 0+340.00)

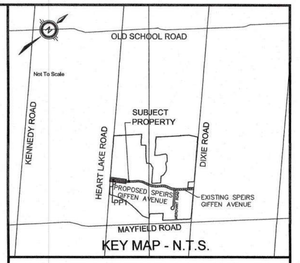


HEARTLAKE ROAD NOTES:

1. EXISTING POST AND WIRE FENCE (WITHIN THE SPEIRS GIFFEN AVENUE RIGHT OF WAY) TO BE REMOVED AND DISPOSED OF OFF-SITE. THE REMAINING POST AND WIRE FENCE TO REBRACED WITH NEW POSTS AT THE RIGHT OF WAY LIMITS AND WIRES TIGHTENED TO EXISTING OR BETTER CONDITIONS, AS PER OPSD 972.101 (SEE OPSD, SHEET 20).
2. A ROAD OCCUPANCY PERMIT IS REQUIRED FROM THE TOWN ON CALEDON PRIOR TO ANY WORKS WITHIN THE HEARTLAKE ROAD RIGHT OF WAY.

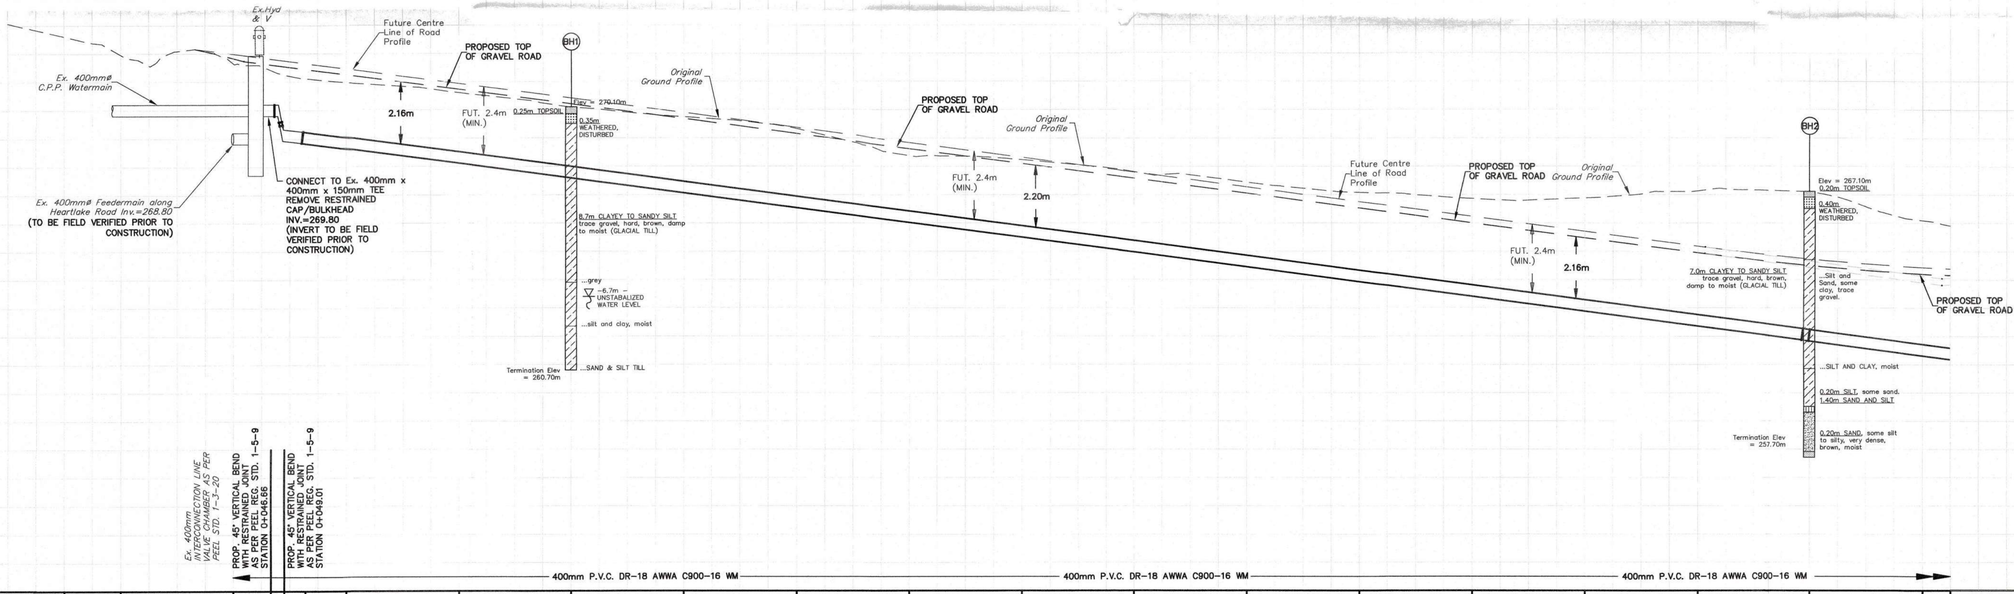
ROAD DESIGN BETWEEN STA STA 0+000 AND STA 0+698 SUBJECT TO FUTURE REVIEW





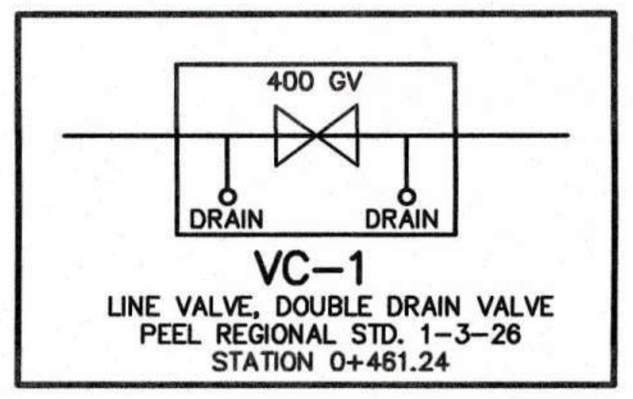
NOTES

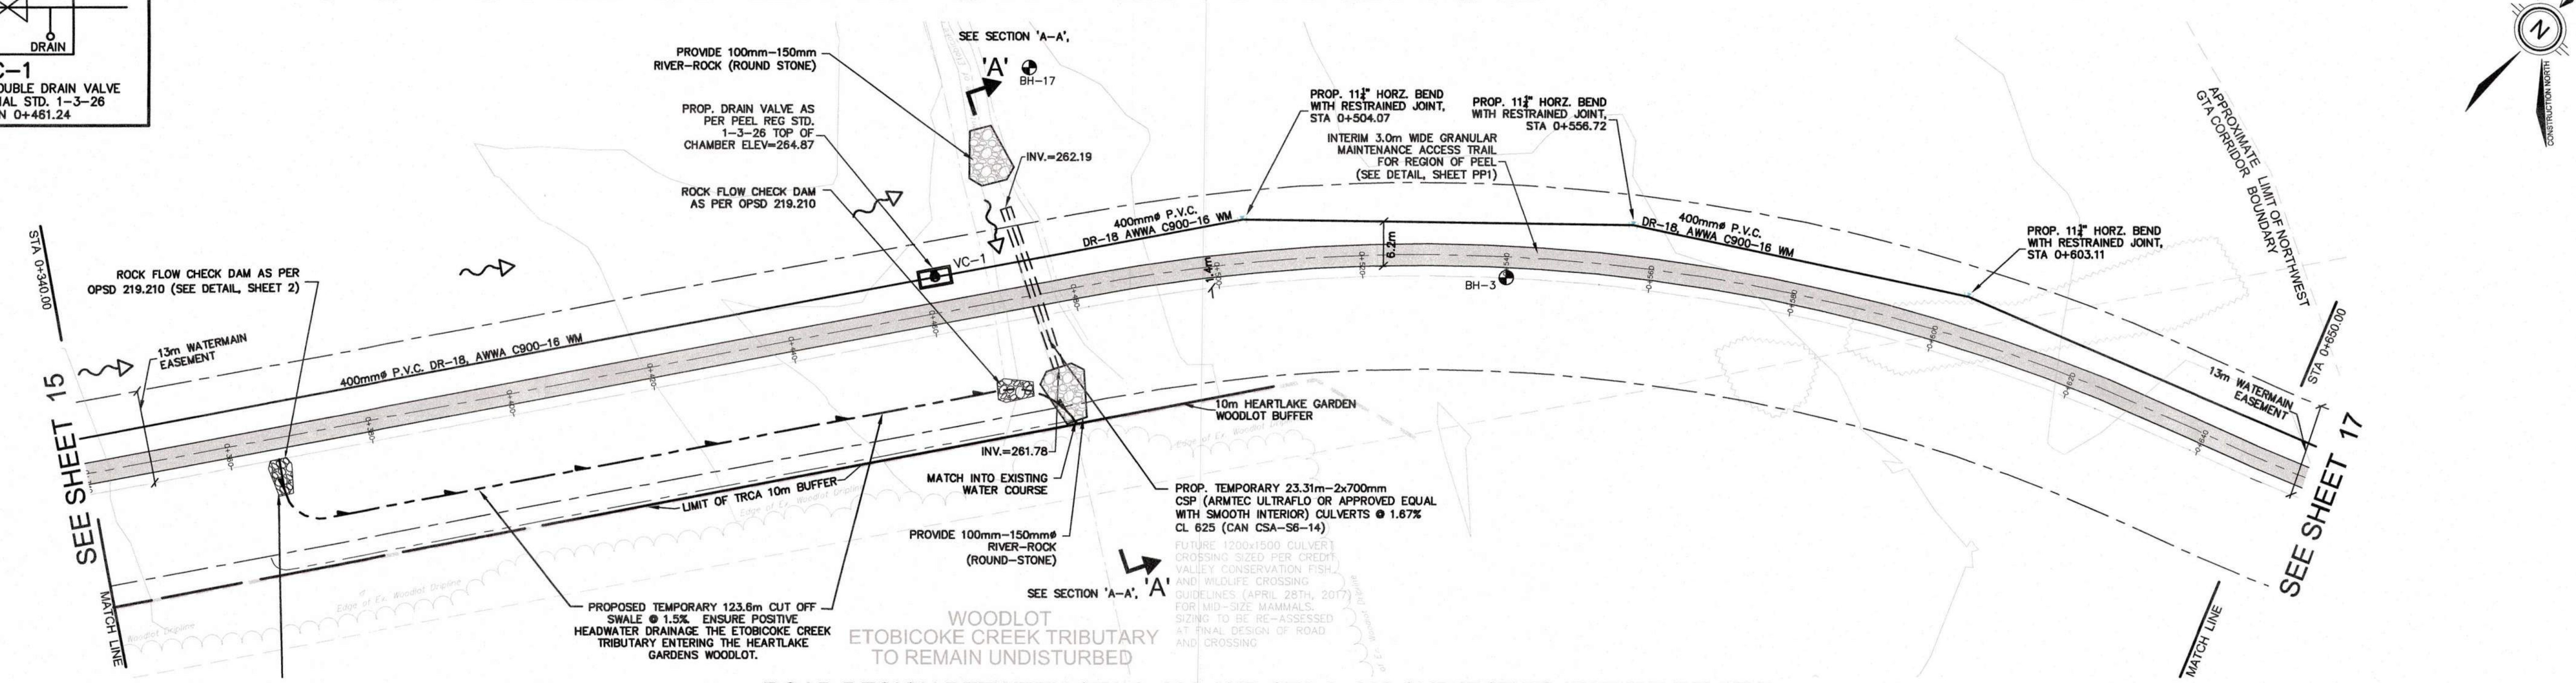
1. SERVICES ALONG HEARTLAKE ROAD WERE DERIVED FROM PLAN & PROFILE ENGINEERING DRAWINGS (NOT MARKED AS AS-CONSTRUCTED) RECIEVED BY THE REGION OF PEEL, INDEXED AS 59283-D_IFC, 59284-D_IFC, 59285-D_IFC, 59286-D_IFC, 59320-D_IFC, 59321-D_IFC, 59322-D_IFC, & 59323-D_IFC. ALL LOCATIONS ARE APPROXIMATE AND MUST BE FIELD VERIFIED PRIOR TO CONSTRUCTION. ANY DISCREPANCIES MUST BE BROUGHT TO THE DESIGN ENGINEERS ATTENTION IMMEDIATELY.
2. ALL BENDS, VALVES etc, TO BE RESTRAINED AS PER REGION OF PEEL STANDARD DRAWING NO.1-S-9.
3. CLAY CUT OFF COLLARS TO BE INSTALLED AS DIRECTED BY THE GEOTECHNICAL ENGINEER (SEE ANTI-SEEP COLLAR DETAIL SHEET 20).
4. WATERMAIN DEFLECTIONS AS PER REG. OF PEEL PUBLIC WORKS WATERMAIN DESIGN CRITERIA SECTION 2.4, PAGE 5.

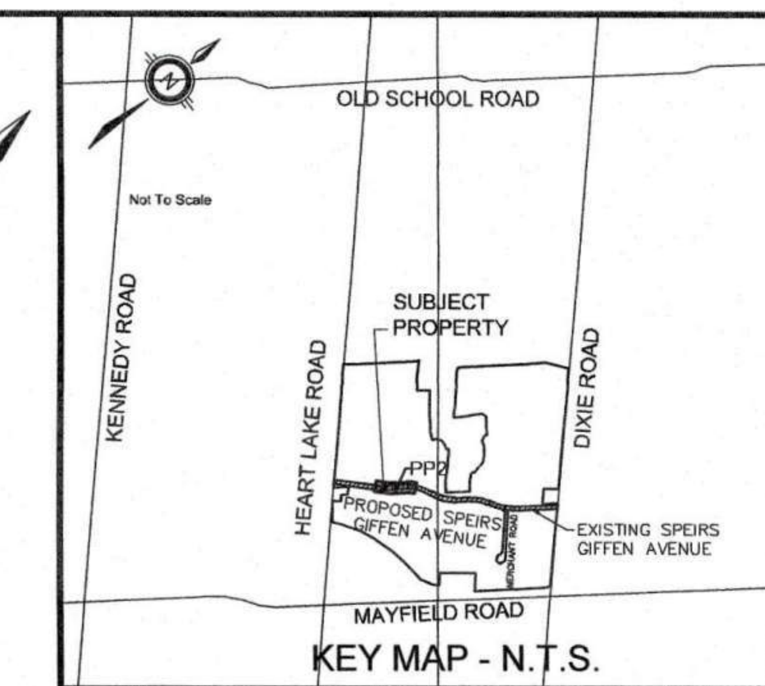


| | | |

FUTURE SPEIRS GIFFEN AVENUE (0+340.00 - 0+650.00)







NOTES

1. ALL BENDS, VALVES etc. TO BE RESTRAINED AS PER REGION OF PEEL STANDARD DRAWING NO:1-5-9.
2. CLAY CUT OFF COLLARS TO BE INSTALLED AS DIRECTED BY THE GEOTECHNICAL ENGINEER (SEE ANTI-SEEP COLLAR DETAIL SHEET 20).
3. WATERMAIN DEFLECTIONS AS PER REG. OF PEEL PUBLIC WORKS WATERMAIN DESIGN CRITERIA SECTION 2.4, PAGE 5.
4. ALL BENDS, VALVES etc. TO BE RESTRAINED AS PER REGION OF PEEL STANDARD DRAWING NO:1-5-9.

GENERAL NOTES - LANDSCAPING

NOTE 1
DEPICTED ON THIS PLAN ARE THE SPECIES AND THE APPROXIMATE LOCATION OF STREET TREE. ONCE DRIVEWAYS, UTILITIES AND LIGHT STANDARDS HAVE BEEN INSTALLED, THE EXACT LOCATION OF STREET TREES WILL BE DETERMINED ON SITE BY THE LANDSCAPE ARCHITECT AND APPROVED BY THE MUNICIPALITY PRIOR TO PLANTING.

NOTE 2
MINIMUM CLEARANCES FOR STREET TREES (WHEN TREES ARE PLANTED 1.5M FROM THE CURB):
- *2M FROM WATER HYDRANTS
- *2M FROM DRIVEWAYS
- *2M FROM NEIGHBOURHOOD MAILBOXES
- 3M FROM HYDRO TRANSFORMERS
- 5M FROM STREETLIGHTS
- 15M MINIMUM FROM STREET LINE (STREET INTERSECTION AS MEASURED FROM BACK OF CURB) AND BEHIND THE DAYLIGHT TRIANGLE AS PER THE GEOMETRIC DESIGN STANDARDS FOR ONTARIO HIGHWAYS
- 18M FROM FACE OF ALL WARNING AND REGULATORY SIGNS

WHEN THE MINIMUM DISTANCES NOTED ABOVE ARE NOT ACHIEVABLE, TREES MAY BE PLANTED IN AN ALTERNATE LOCATION, 0.5M FROM THE PROPERTY LINE (60CM BEHIND THE SIDEWALK) AND ADJACENT TO ANY FENCES, OR JUST INSIDE THE STREET LINE ON PRIVATE PROPERTY, AS MIGHT BE THE CASE IN A CUL-DE-SAC. IF A TREE IS PLANTED IN AN ALTERNATE LOCATION, THE DISTANCES MARKED WITH AN ASTERISK MUST STILL BE MAINTAINED.

NOTE 3
THE TREE PITS AND PLANTING BEDS FOR ALL TREES AND SHRUBS LOCATED WITHIN 1 METRE OF UNDERGROUND UTILITIES ARE TO BE HAND DUG.

NOTE 4
MINIMUM CLEARANCE FOR FENCES:
1M FROM FIRE HYDRANTS

SPECIFICATIONS

A. GENERAL

i) These Specifications are to be read in conjunction with the General Conditions of the contract, as prepared by and available at the offices of IBI GROUP .

ii) Prior to commencing work, the Contractor shall:
1. Become familiar with the plans, details, and specifications of this project,
2. Visit the site to ascertain and take account of existing conditions and any deviations from the plans in work by others, and
3. Finalize all design alternatives in consultation with the Landscape Architect.

iii) Prior to excavating, the Contractor shall verify the location of all underground utilities. In the event of a conflict between a proposed tree location and an underground service, the exact location of the tree shall be determined on site by the landscape architect and/or the Town's representative.

iv) The Contractor shall, at his or her own expense, repair any damage to existing utilities, structures, facilities, etc. done in the performance of his work.

v) All site work shall conform to the *Canadian National Master Construction Specifications*, a copy of which can be obtained from Construction Specifications Canada, 100 Lombard St., Suite 200, Toronto, Ontario M5C 1M3; Tel. (416) 777-2198; Fax (416) 777-2197. It is the responsibility of the Contractor to be thoroughly familiar with these specifications and their implications for this project.

B. PLANT MATERIAL

i) All plants shall be installed true to specified names, sizes, grades, etc., and shall conform to the standards of the Canadian Nursery Landscapes Association.

ii) All plants shall be nursery grown in a hardiness zone appropriate to site conditions, as published by Agriculture Canada, titled 'Map of Plant Hardiness Zones in Canada'.

iii) In the event of a discrepancy in plant quantity between the Planting Plan and the Plant List, the Planting Plan shall govern.

iv) The Contractor shall make plants available for inspection by the Landscape Architect and/or the Town's representative prior to shipping to the site. This does not limit the right of the Landscape Architect and/or the Town's representative to later reject plant material that is of poor quality, damaged during shipping or installation, performing poorly while the guarantee period is still in effect, or otherwise does not conform to the specifications.

v) Plant substitutions must be approved in writing by the Town and the Landscape Architect prior to delivery of the material to the site.

vi) The Contractor shall use standard industry methods for planting trees and shrubs. Trees shall be turned to give the best appearance; they shall also be guyed or staked immediately after planting and as detailed on the drawings.

	1	CHANGES TO NOTES VI & VII.		MARCH 08		
	NO.	REVISION	APR'D	DATE		

SPECIFICATIONS continued from previous panel

C. BED PREPARATION

i) The Contractor shall scarify the sides and bottom of excavated tree pits and shrub beds prior to backfilling. Due to the heavy clay soil in the Bolton area, tree and planting beds shall be backfilled to the specified depths with:

2 Parts "triple mix," delivered to the site, to be well-mixed with . . .
1 Part local topsoil (viz., subdivision topsoil that has been removed and stockpiled.) If topsoil is unavailable, topsoil with clay content shall be imported and mixed with triple mix.

ii) Tree pits shall be constructed with saucers and mulch as detailed.

D. PRELIMINARY ACCEPTANCE

i) When landscaping is completed, the Landscpe Architect shall submit a Certificate of Completion to the Town of Caledon certifying that all landscape works have been completed in accordance with the approved plans.

ii) The Landscape Architect shall prepare a Summary Chart, indicating the plant species, quantity, location, planting date(s), and any other relevant information requested by the Municipality,

iii) Upon receipt of the Certificate of Completion, the Planning Department will conduct a preliminary inspection of the site and, provided that the works are in satisfactory condition, will grant preliminary acceptance of the landscaping.

E. GUARANTEE

i) All streetscape landscaping shall carry a guarantee/maintenance of **TWO** (2) years, commencing from the date that written preliminary acceptance is granted by the Town of Caledon. In each of the next two years, the Landscape Architect shall conduct an inspection and prepare a report, recommending the replacements and/or works needed to achieve the intent of the approved landscape plan. All replacements shall be recorded in the inspection Summary Chart. The Landscape Architect shall file a copy of the report and/or Summary Chart with the Municipality.

ii) Replacement plant material and repaired work shall be guaranteed for a minimum **TWO** (2) years from the date of replacement, and will not be granted final acceptance until the guarantee has expired or as otherwise determined by the Planning Department.

iii) All other landscape work performed under this contract shall be fully guaranteed for **TWO** (2) years.

F. MAINTENANCE

i) The maintenance of all landscape installations throughout the guarantee period shall include:

1) proper irrigation to ensure optimum growth of trees and shrubs,
2) cultivation and weeding of tree pits and planting beds,
3) insect and disease control, and
4) pruning and fertilizing, as required or as directed by the Municipality or Landscape Architect.

	NO.	REVISION	APR'D	DATE		

SPECIFICATIONS continued from previous panel

G. CERTIFICATE OF ASSUMPTION

i) At the end of the guarantee period, the Contractor shall remove all tree stakes, and bark wrap, and shall add extra mulch where necessary.

ii) When these final tasks have been completed, the Landscape Architect will provide the Town with a Certificate of Completion. All landscape work will then be inspected by the Municipality and, if satisfied that all work has been completed in accordance with the approved landscape plans, will issue a Certificate of Assumption and release any outstanding funds.

(1) Trees recommended for PRESERVING in SHADED BOXES
(2) Condition: Good (G) - dead branches less than 10%; signs of good compartmentalization on any wounds; no structural defects
Fair (F) -10-30% dead branches; size or occurrence of wounds present some concerns; minor structural defects
Poor (P) - more than 30% dead branches; weak compartmentalization; early leaf drop; presence of insects or disease; major structural defects
Dead (D) - tree shows no signs of life
(3) Comments: additional information on specimen
(4) Impacts: NONE - no construction activity occurs at or within the dripline of a tree.
LIMITED: XXX - construction activity occurs at or within the dripline of a tree, but is not likely to lead to tree death in the short term (5-10 years) if precautionary measures are taken; this may require root and/or canopy pruning.
IMPACTED: XXX - construction activity (XXX = structures, fencing, trenching, grading, etc) which requires the direct removal of a tree or occurs within a significant portion of the canopy/root zone, such that the activity will significantly affect tree health leading to death in the short term.
(5) Recommendation: Preserve, Remove, Transplant
(6) Any trees located on the property line or on the adjacent property that are proposed to be removed or pruned, will require written consent from the adjacent landowner. All correspondence is to be forwarded to the Town prior to any removals.
(7) 2:1 tree compensation will be required for all tree removals. Tree compensation planting is in addition to the standard required planting. In the event that tree compensation cannot be accommodated for in the planting design, financial compensation shall be collected at a rate (per tree) as determined by the Town.
(8) Removals should occur outside of the breeding bird season (April 1- August 1). If this is not possible, clearance with an ecologist should occur prior to construction to ensure no loss of bird nest, egg or unfledged young.

TREE PRESERVATION NOTES:

1. ANY TREES LOCATED ON THE PROPERTY LINE OR ON THE ADJACENT PROPERTY THAT ARE PROPOSED TO BE REMOVED OR PRUNED WILL REQUIRE WRITTEN CONSENT FROM THE ADJACENT LANDOWNER. ALL CORRESPONDENCE IS TO BE FORWARDED TO THE TOWN PRIOR TO ANY REMOVALS.
2. 2:1 TREE COMPENSATION WILL BE REQUIRED FOR ALL TREE REMOVALS. TREE COMPENSATION PLANTING IS IN ADDITION TO THE STANDARD REQUIRED PLANTING. IN THE EVENT THAT TREE COMPENSATION CANNOT BE ACCOMMODATED FOR IN THE PLANTING DESIGN, FINANCIAL COMPENSATION SHALL BE COLLECTED AT A RATE (PER TREE) AS DETERMINED BY THE TOWN.
3. REMOVALS SHOULD OCCUR OUTSIDE OF THE BREEDING BIRD SEASON (APRIL1-AUGUST1). IF THIS IS NOT POSSIBLE, CLEARANCE WITH AN ECOLOGIST SHOULD OCCUR PRIOR TO CONSTRUCTION TO ENSURE NO LOSS OF BIRD NEST, EGG OR UNFLEDGED YOUNG.

ONTARIO ASSOCIATION OF LANDSCAPE ARCHITECTS — TIM O'BRIEN — OALA

SEAL

LANDSCAPE NOTES:

A. GENERAL

i) THESE SPECIFICATIONS ARE TO BE READ IN CONJUNCTION WITH THE GENERAL CONDITIONS OF THE CONTRACT.

ii) PRIOR TO COMMENCING WORK, THE CONTRACTOR SHALL:
1. BECOME FAMILIAR WITH THE PLANS, DETAILS, AND SPECIFICATIONS OF THIS PROJECT;
2. VISIT THE SITE TO ASCERTAIN AND TAKE ACCOUNT OF EXISTING CONDITIONS AND ANY DEVIATIONS FROM THE PLANS IN WORK BY OTHERS, AND
3. FINALIZE ALL DESIGN ALTERNATIVES IN CONSULTATION WITH THE LANDSCAPE ARCHITECT.

iii) PRIOR TO EXCAVATING, THE CONTRACTOR SHALL VERIFY THE LOCATION OF ALL UNDERGROUND UTILITIES. IN THE EVENT OF A CONFLICT BETWEEN A PROPOSED TREE LOCATION AND AN UNDERGROUND SERVICE, THE EXACT LOCATION OF THE TREE SHALL BE DETERMINED ON SITE BY THE LANDSCAPE ARCHITECT AND/OR THE TOWN'S REPRESENTATIVE.

iv) THE CONTRACTOR SHALL, AT HIS OR HER OWN EXPENSE, REPAIR ANY DAMAGE TO EXISTING UTILITIES, STRUCTURES, FACILITIES, ETC. DONE IN THE PERFORMANCE OF HIS WORK.

v) ALL SITE WORK SHALL CONFORM TO THE *CANADIAN NATIONAL MASTER CONSTRUCTION SPECIFICATIONS*, A COPY OF WHICH CAN BE OBTAINED FROM CONSTRUCTION SPECIFICATIONS CANADA, 100 LOMBARD ST., SUITE 200, TORONTO, ONTARIO M5C 1M3; TEL. (416) 777-2198; FAX (416) 777-2197. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO BE THOROUGHLY FAMILIAR WITH THESE SPECIFICATIONS AND THEIR IMPLICATIONS FOR THE PROJECT.

B. PLANT MATERIAL

i) ALL PLANTS SHALL BE INSTALLED TRUE TO SPECIFIED NAMES, SIZES, GRADES, ETC., AND SHALL CONFORM TO THE STANDARDS OF THE CANADIAN NURSERY LANDSCAPE ASSOCIATION.

ii) ALL PLANTS SHALL BE NURSERY GROWN IN HARDINESS ZONE APPROPRIATE TO SITE CONDITIONS, AS PUBLISHED BY AGRICULTURE CANADA, TITLED 'MAP OF PLANT HARDINESS ZONES OF CANADA'.

iii) IN THE EVENT OF A DISCREPANCY IN PLANT QUANTITY BETWEEN THE PLANTING PLAN AND PLAN LIST, THE PLANTING PLAN SHALL GOVERN.

iv) THE CONTRACTOR SHALL MAKE PLANTS AVAILABLE FOR INSPECTION BY THE LANDSCAPE ARCHITECT AND/OR THE TOWN'S REPRESENTATIVE PRIOR TO SHIPPING TO THE SITE. THIS DOES NOT LIMIT THE RIGHT OF THE LANDSCAPE ARCHITECT AND/OR THE TOWN'S REPRESENTATIVE TO LATER REJECT PLANT MATERIAL THAT IS OF POOR QUALITY, DAMAGED DURING SHIPPING OR INSTALLATION, PERFORMING POORLY WHILE THE GUARANTEE PERIOD IS STILL IN EFFECT, OR OTHERWISE DOES NOT CONFORM TO THE SPECIFICATIONS.

v) PLANT SUBSTITUTIONS MUST BE APPROVED IN WRITING BY THE TOWN AND THE LANDSCAPE ARCHITECT PRIOR TO DELIVERY OF THE MATERIAL TO THE SITE.

vi) THE CONTRACTOR SHALL USE STANDARD INDUSTRY METHODS FOR PLANTING TREES AND SHRUBS. TREES SHALL BE TURNED TO GIVE THE BEST APPEARANCE; THEY SHALL ALSO BE GUYED OR STAKED IMMEDIATELY AFTER PLANTING AND AS DETAILED ON THE DRAWINGS.

C. BED PREPARATION

i) THE CONTRACTOR SHALL SCARIFY THE SIDES AND BOTTOM OF EXCAVATED TREE PITS AND SHRUB BEDS PRIOR TO BACKFILLING. DUE TO THE HEAVY CLAY SOIL IN THE BOLTON AREA, TREE AND PLANTING BEDS SHALL BE BACKFILLED TO THE SPECIFIED DEPTHS WITH:

2 PARTS "TRIPLE MIX," DELIVERED TO THE SITE, TO BE WELL-MIXED WITH ....
1 PART LOCAL TOPSOIL (VIS., SUBDIVISION TOPSOIL THAT HAS BEEN REMOVED AND STOCKPILED.) IF TOPSOIL IS UNAVAILABLE, TOPSOIL WITH CLAY CONTENT SHALL BE IMPORTED AND MIXED WITH TRIPLE MIX.

ii) TREE PITS SHALL BE CONSTRUCTED WITH SAUCERS AND MULCH AS DETAILED.

D. PRELIMINARY ACCEPTANCE

i) WHEN LANDSCAPING IS COMPLETED, THE LANDSCAPE ARCHITECT SHALL SUBMIT A CERTIFICATE OF COMPLETION TO THE TOWN OF CALEDON CERTIFYING THAT ALL LANDSCAPE WORKS HAVE BEEN COMPLETED IN ACCORDANCE WITH THE APPROVED PLANS.

ii) THE LANDSCAPE ARCHITECT SHALL PREPARE A SUMMERY CHART, INDICATING THE PLANT SPECIES, QUANTITY, LOCATION, PLANTING DATE(S), AND ANY OTHER RELEVANT INFORMATION REQUESTED BY THE MUNICIPALITY.

iii) UPON RECEIPT OF THE CERTIFICATE OF COMPLETION, THE PLANNING DEPARTMENT WILL CONDUCT A PRELIMINARY INSPECTION OF THE SITE AND, PROVIDED THAT THE WORKS ARE IN SATISFACTORY CONDITION, WILL GRANT PRELIMINARY ACCEPTANCE OF THE LANDSCAPING.

E. GUARANTEE

i) ALL STREETSCAPE LANDSCAPING SHALL CARRY A GUARANTEE/MAINTENANCE OF **TWO** (2) YEARS, COMMENCING FROM THE DATE THAT WRITTEN PRELIMINARY ACCEPTANCE IS GRANTED BY THE TOWN OF CALEDON. IN EACH OF THE NEXT TWO YEARS , THE LANDSCAPE ARCHITECT SHALL CONDUCT AN INSPECTION AND PREPARE A REPORT, RECOMMENDING THE REPLACEMENTS AND/OR WORK NEEDED TO ACHIEVE THE INTENT OF THE APPROVED LANDSCAPED PLAN. ALL REPLACEMENTS SHALL BE RECORDED IN THE INSPECTION SUMMERY CHART. THE LANDSCAPE ARCHITECT SHALL FILE A COPY OF THE REPORT AND/OR SUMMARY CHART WITH THE MUNICIPALITY.

ii) REPLACEMENT PLANT MATERIAL AND REPAIRED WORK SHALL BE GUARANTEED FOR A MINIMUM TWO (2) YEARS FROM THE DATE OF REPLACEMENT, AND WILL NOT BE GRANTED FINAL ACCEPTANCE UNTIL THE GUARANTEE HAS EXPIRED OR AS OTHERWISE DETERMINED BY THE PLANNING DEPARTMENT.

iii) ALL OTHER LANDSCAPE WORK PERFORMED UNDER THIS CONTRACT SHALL BE FULLY GUARANTEED FOR TWO (2) YEARS.

F. MAINTENANCE

i) THE MAINTENANCE OF ALL LANDSCAPE INSTALLATIONS THROUGHOUT THE GUARANTEE PERIOD SHALL INCLUDE:

G. CERTIFICATE OF ASSUMPTION

i) AT THE END OF THE GUARANTEE PERIOD, THE CONTRACTOR SHALL REMOVE ALL TREE STAKES, BARK WRAP, AND SHALL ADD EXTRA MULCH WHERE NECESSARY.

ii) WHEN THESE FINAL TASKS HAVE BEEN COMPLETED, THE LANDSCAPE ARCHITECT WILL PROVIDE THE TOWN WITH A CERTIFICATE OF COMPLETION. ALL LANDSCAPE WORK WILL THEN BE INSPECTED BY THE MUNICIPALITY AND, IF SATISFIED THAT ALL THE WORK HAS BEEN COMPLETED IN ACCORDANCE WITH THE APPROVED LANDSCAPE PLANS, WILL ISSUE A CERTIFICATE OF ASSUMPTION AND RELEASE ANY OUTSTANDING FUNDS.

SEED MIX

CONTRACTOR TO SOW NURSE CROP AVENA SATIVA OVER ENTIRE AREA;
TO BE SEEDED AT A RATE OF 22kg/ HECTARE.

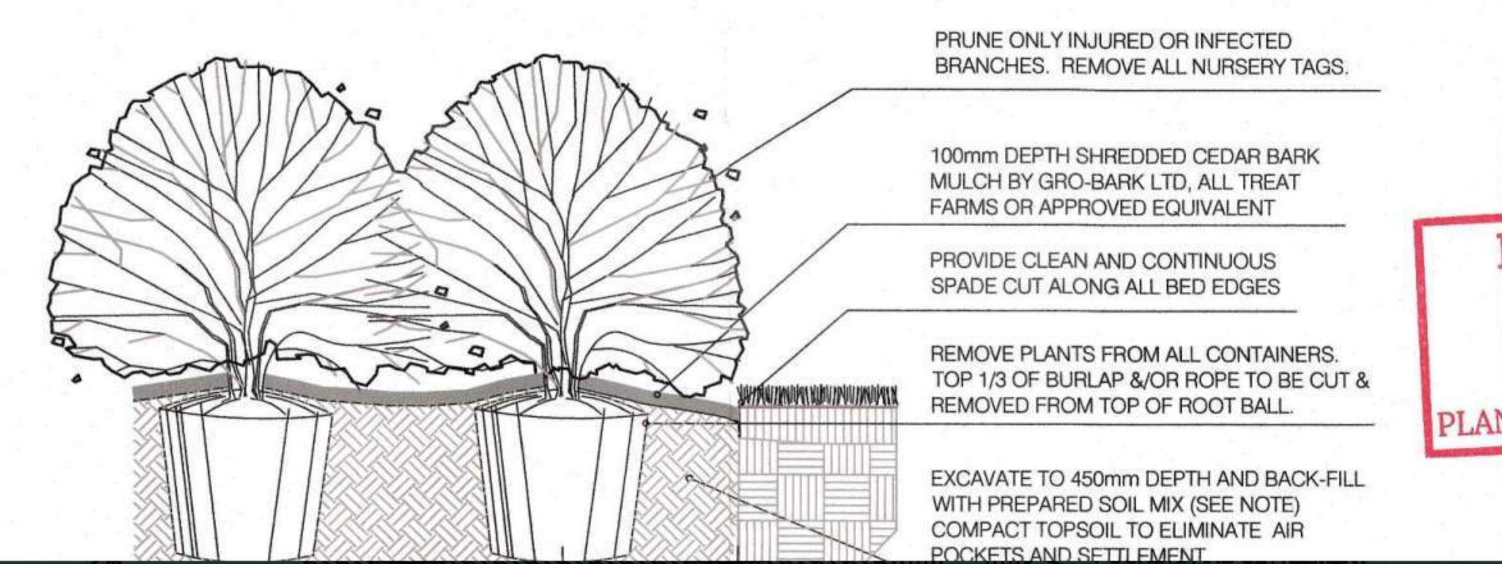
CVC 7 - UPLAND NATIVE MEADOW MIX TO INCLUDE:

Riverbank Wild Rye *Elymus riparius*	40%
Evening Primrose *Oenethera biennis*	25%
Meadow/Open Field Sedge *Carex granularis*	15%
Black Eyed Susan *Rudbeckia hirta*	10%
Canada Goldenrod *Solidago canadensis*	2%
Common Milkweed *Asclepias syriaca*	2%
Canada Anemone *Anemone canadensis*	1%
Blue Wood (Heart Leaved Aster) *Aster cordifolius*	1%
Grass Leaved Goldenrod *Euthamia graminifolia*	1%
New England Aster *Aster novae-angliae*	1%
Virgins Bower *Clematis virginiana*	1%
Wild Bergamot M*narda fistulosa*	1%

CVC 6 - EARLY SUCCESSION WET MEADOW MIX TO INCLUDE:

Virginia Wild Rye *Elymus virginicus*	25%
Fowl Bluegrass *Poa palustris*	25%
Fox Sedge *Carex vulpinoidea*	25%
Soft Rush *Juncus effusus*	5%
Bebb's Sedge *Carex bebbii*	5%
Stalk-grain Sedge *Carex stipata*	4%
Path Rush *Juncus tenuis*	3%
Tall Manna Grass *Glyceria grandis*	2%
Canada Goldenrod *Solidago canadensis*	2%
Purple Stemmed Aster *Aster puniceus*	1%
Great Blue Lobelia *Lobelia siphilitica*	1%
New England Aster *Aster novae-angliae*	1%
Wild Bergamot *Monarda fistulosa*	1%

CREDIT VALLEY CONSERVATION SEED MIXES OR APPROVED EQUIVALENT. APPLY AT A RATE OF 22-25kg/ HECTARE. NATIVE SEED MIXES DO BEST WHEN PLANTED IN THE FALL, BETWEEN OCTOBER 15TH AND NOVEMBER 15TH. LATE FALL SOWINGS ADDITIONALLY STRATIFY THE SEED. AN EARLY SPRING SOWING IN APRIL WILL WORK BUT NOT AS EFFECTIVELY. IF IDEAL GROWING SEASONS ARE UNAVAILABLE, THE SEED MAY GO DORMANT AND NOT GERMINATE UNTIL SPRING THE FOLLOWING YEAR.



NOTES:
1. SOIL MIXTURE: 2 PARTS "TRIPLE MIX," WITH 1 PART LOCAL TOPSOIL.
2. SAUCER SHALL BE SOAKED WITH WATER AND MULCHED IMMEDIATELY FOLLOWING PLANTING.
3. ALL DIMENSIONS ARE IN mm.
4. IN POORLY DRAINED SOILS PLANT SHRUB SLIGHTLY HIGHER THAN ADJACENT GRADE.
5. ALL PLANTS TO BE STRAIGHT AND PLANTED VERTICALLY REGARDLESS OF SLOPE.

1 BALLED AND BURLAPPED/POTTED SHRUB

TITLE:

SPEIRS GIFFEN AVENUE - PH 2
MAYFIELD WEST INDUSTRIAL LANDS

LANDSCAPE BUFFER PLAN

DATE:	2018-02-11	DESIGNED BY:	CM
SCALE:	1:250	DRAWN BY:	CM
		CHECKED BY:	TO

GENERAL NOTES:

1. ALL WORK INVOLVED IN THE CONSTRUCTION, RELOCATION, REPAIR OF MUNICIPAL SERVICES FOR THE PROJECT SHALL BE TO THE SATISFACTION OF THE TOWN.
2. THE APPLICANT, APPLICANT'S REPRESENTATIVE, CONSULTANT, CONTRACTOR AND SUB CONTRACTORS ARE RESPONSIBLE TO ENSURE THAT THEIR DESIGN MATERIALS AND CONSTRUCTION PRACTICES CONFORM TO THE LATEST REGION, TOWN, MINISTRY OF ENVIRONMENT, TORONTO REGIONAL CONSERVATION AUTHORITY'S DEVELOPMENT STANDARDS, POLICIES, SPECIFICATIONS, MATERIALS, DESIGN CRITERIA AND GUIDELINES AS POSTED ON THEIR RESPECTIVE WEBSITES. IN THE ABSENSE OF REGION AND OR TOWN SPECIFICATIONS, THE ONTARIO PROVINCIAL STANDARD SPECIFICATIONS (OPSS) SHALL APPLY.
3. ALL WORKS SHALL BE COMPLETED IN ACCORDANCE WITH THE "OCCUPATIONAL HEALTH AND SAFETY ACT". THE GENERAL CONTRACTOR SHALL BE DEEMED TO BE THE CONSTRUCTOR AS DEEMED IN THE ACT.
4. THE LOCATION, DIMENSION AND ELEVATION OF ALL EXISTING SERVICES AND UTILITIES ARE TO BE VERIFIED IN THE FIELD PRIOR TO CONSTRUCTION, BY THE CONTRACTOR, AT THEIR EXPENSE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE RESTORATION AND THE REPAIR OF EXISTING UTILITIES DISTRUBED DURING CONSTRUCTION. ALL AREA'S BEYOND THE PLAN OF SUBDIVISION THAT ARE DISTURBED DURING CONSTRUCTION SHALL BE RESTORED TO THE SATISFACTION OF THE REGION OF PEEL AT THE CONTRACTOR'S EXPENSE.
5. ALL DIMENSIONS ARE IN METERS UNLESS SPECIFIED OTHERWISE.
6. ALL BOREHOLES SHOWN ON THE DRAWING ARE FOR INFORMATION ONLY. REFER TO THE GEOTECHNICAL REPORT.
7. ALL SUPPORT OF ALL UTILITIES SHALL BE IN ACCORDANCE WITH THE REQUIREMENTS OF THE AUTHORITY HAVING JURISDICTION INCLUDING THE DECOMMISSIONING AND RECOMMISSIONING OF THE EXISTING LIGHT STANDARDS ALONG EXISTING SPEIRS GIFFEN AVENUE.
8. ALL BACKFILL FOR SEWERS, WATERMAINS AND UTILITIES ON THE ROAD ALLOWANCE MUST BE MECHANICALLY COMPACTED.
9. FIRE ROUTE SIGNS AND 3-WAY FIRE HYDRANTS SHALL BE ESTABLISHED TO THE SATISFACTION OF THE TOWN FIRE DEPARTMENT AND AT THE EXPENSE OF THE OWNER.
10. DRIVEWAY ENTRANCES AND DROP CURBS SHALL BE IN ACCORDANCE WITH THE TOWN OF CALEDON STANDARD DRAWING 402 AND THE MOST RECENT DRAWING STANDARD DRAWINGS FOR THIS PURPOSE (SEE SHEET 19).
11. BOULEVARD DRIVEWAY SLOPES SHOULD BE A MAXIMUM OF 6.0% AND A MINIMUM OF 2.0% WHEREVER POSSIBLE.
12. A MINIMUM CLEAR DISTANCE OF 1.5m IS REQUIRED BETWEEN THE EDGE OF THE DRIVEWAY AND A UTILITY STRUCTURE OR HYDRANT.
13. THE APPROVAL OF THIS PLAN DOES NOT EXEMPT THE OWNER'S BONDED CONTRACTOR FROM THE REQUIREMENTS TO OBTAIN THE VARIOUS PERMITS/APPROVALS NORMALLY REQUIRED TO COMPLETE A CONSTRUCTION PROJECT, SUCH AS, BUT NOT LIMITED TO THE FOLLOWING::
   - ROAD CUT PERMITS
   - APPROACH APPROVAL PERMITS
   - COMMITTEE OF ADJUSTMENT
   - SEWER PERMITS
   - RELOCATION OF SERVICES
   - ENCROACHMENT AGREEMENTS (IF REQUIRED)
14. 3 METER BY 3 METER VISIBILITY TRIANGLES IN WHICH THE MAXIMUM HEIGHT OF ANY OBJECTS OR MATURE VEGETATION IS NOT TO EXCEED A HEIGHT OF 0.60 METERS ABOVE THE CORRESPONDING PERPENDICULAR CENTERLINE ELEVATION OF THE ADJACENT STREET.
15. SILTATION CONTROL DEVICES SHALL BE INSTALLED PRIOR TO WORKS COMMENCING ON THE SITE AND SHALL BE MAINTAINED FOR THE DURATION OF CONSTRUCTION, TO THE SATISFACTION OF THE TOWN.
16. THE SUB-GRADE SOILS EXPOSED AFTER EXCAVATION SHALL BE INSPECTED AND CERTIFIED BY A QUALIFIED REGISTERED PROFESSIONAL SOILS ENGINEER AND A COPY OF THE REPORT SHALL BE FORWARDED TO THE TOWN OF CALEDON BUILDING DIVISION. WHERE THE FOOTING WILL BE SITUATED ON FILL MATERIAL, THE FOOTINGS SHALL BE DESIGNED AND APPROVED BY QUALIFIED REGISTERED PROFESSIONAL ENGINEER.
17. ALL PROPOSED SEWERS, THROUGHOUT THEIR LENGTH FROM THE MAIN SEWER TO THE BUILDING OR PLACE TO BE DRAINED IS TO BE LAID, AS NEARLY AS PRACTICAL, IN A STRAIGHT LINE IN A TRENCH AT A RIGHT ANGLE TO THE MAIN SEWER.

REGIONAL ROAD (DIXIE ROAD):

1. ALL CONSTRUCTION SIGNAGE MUST CONFORM TO MTO MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES.
2. ASPHALT PRESERVATIVE SEALER SUCH AS RE-CLIMATEA OR APPROVED EQUIVALENT SHALL BE APPLIED AFTER THE ONE-YEAR MAINTENANCE PERIOD FOR THE TOP COARSE ASPHALT.
3. ALL TEMPORARY SIGNAGE AND TRAFFIC CONTROL MEASURES SHALL BE IN ACCORDANCE WITH REQUIREMENTS OF ONTARIO TRAFFIC MANUAL, BOOK 7 TEMPORARY CONDITION.
4. ACCESS TO EXISTING ENTRANCES AND SIDE STREETS SHALL BE MAINTAINED.
5. WORK OPERATIONS THAT REQUIRE DIVERTING TRAFFIC TO ONE LANE SUBJECT TO TIME RESTRICTIONS AND/OR NIGHT TIME OPERATIONS AS SPECIFIED IN ROAD OCCUPANCY PERMIT.
6. LOCATION OF EXISTING UTILITIES TO BE ESTABLISHED BY CONTRACTOR, ALL EXISTING UTILITY ELEVATIONS (SEWERS AND WATERMAIN) INCLUDING CENTRE LINE OF THE ROAD ELEVATIONS HAVE TO BE VERIFIED BY CONTRACTOR PRIOR TO COMMENCING ANY WORK ON SITE. ANY DISCREPANCIES SHALL BE REPORTED TO THE DESIGN ENGINEER AND THE REGION IMMEDIATELY.
7. THE CONTRACTOR(S) SHALL BE SOLELY RESPONSIBLE FOR LOCATING, SUPPORTING AND PROTECTING ALL UNDERGROUND AND OVERHEAD UTILITIES AND STRUCTURES EXISTING AT THE TIME OF CONSTRUCTION IN THE AREA OF HIS WORK, WHETHER SHOWN ON THE PLANS OR NOT, AND FOR ALL REPAIRS AND CONSEQUENCES RESULTING FROM DAMAGE TO SAME.
8. THE CONTRACTOR(S) SHALL BE SOLELY RESPONSIBLE TO GIVE 72 HOURS WRITTEN NOTICE TO UTILITY AUTHORITY PRIOR TO CROSSING SUCH UTILITIES FOR THE PURPOSE OF INSPECTION. THIS INSPECTION WILL BE FOR THE DURATION OF CONSTRUCTION WITH THE CONTRACTOR RESPONSIBLE FOR ALL COSTS ARISING FROM SUCH INSPECTIONS.
9. THE CONTRACTOR SHALL NOTIFY IN ADVANCE, AS REQUIRED, THE APPROPRIATE AUTHORITY HAVING JURISDICTION FOR THE ROAD PRIOR TO COMMENCING ANY WORK AND SHALL ACQUIRE AND SATISFY THE REQUIREMENTS OF APPROPRIATE PERMITS (FEES, INSPECTIONS, SIGNAGE, TRAFFIC, MAINTENANCE, DIVERSION, ETC.)
10. ALL EXISTING PAVEMENTS, CURBS, SIDEWALKS, AND BOULEVARDS AND OTHER AREAS DISTURBED BY THE WORK, TO BE REINSTATED EQUAL OR BETTER TO EXISTING AND TO THE SATISFACTION OF APPLICABLE AUTHORITY HAVING JURISDICTION OVER THE ROAD ALLOWANCE. EXISTING PAVEMENTS AND CURBS TO BE SAW-CUT TO PROVIDE A SMOOTH JOINT.
11. DIXIE ROAD, ROAD BASE SHALL BE AS PER REGION OF PEEL STD. DWG. 5-1-1 AND 5-1-2.

ROADWORKS:

1. GENERAL
   - 1.1. CONSTRUCTION OF ROADWAYS & RELATED WORKS SHALL BE IN ACCORDANCE WITH TOWN OF CALEDON STANDARDS AND SPECIFICATIONS (LATEST EDITION).
   - 1.2. FOLLOWING THE INSTALLATION OF SEWERS, ALL ROADWAYS SHALL BE ROUCH GRADED TO A SUBGRADE FOR THE INSTALLATION OF WATERMAINS AND UTILITIES.
2. PRELIMINARY ROADS
   - 2.1. SPEIRS GIFFEN AVENUE EXTENSION FROM THE CUL-DE-SAC TO HEARTLAKE ROAD SHALL BE CONSIDERED A PRELIMINARY ROAD AND STILL SUBJECT TO FUTURE MUNICIPAL REVIEW.
   - 2.2. THE PRELIMINARY ROAD RIGHT OF WAY (GRAVEL ROAD, FROM THE CUL-DE-SAC TO THE APPROACH ON HEARTLAKE ROAD) SHALL BE GRADED TO BASE COURSE ELEVATIONS (SEE INTERIM GRAVEL ACCESS ROAD DETAIL, SHEET 16)
3. CATCH BASINS
   - 3.1. CATCH BASIN CONNECTIONS TO BE 250mm DIA. PVC PIPE, CSA 182.2, SDR-35 UNLESS OTHERWISE NOTED.
   - 3.2. SINGLE / DOUBLE STREET CATCH BASINS AS PER OPSD 705.010 / 705.020 RESPECTIVELY WITH GOSS TRAPS.

STREET CB GRATES AS PER OPSD 400.100

4. FINAL ROADWAYS
   - 4.1. ROAD DESIGN TO ADHERE TO TOWN OF CALEDON STANDARD No: 211 (SEE DETAIL SEE DETAIL, SHEET 16) FOR A 26.0m INDUSTRIAL COLLECTOR (14.5m ROADWAY, 13.9m PAVEMENT).
   - 4.2. MANHOLES AND CATCH BASINS SHALL BE INSTALLED FLUSH WITH THE BINDER COURSE ASPHALT (HL8).
   - 4.3. MANHOLES TO BE ADJUSTED TO MATCH FINAL LIFT OF ASPHALT.
5. SIDEWALKS
   - 5.1. CONCRETE CURB AND GUTTER AS PER OPSD 600.040 (SEE SHEET 20), Min. 30 MPa STRENGTH. A 50 mm KEY IS REQUIRED FOR ALL LOCATIONS.
   - 5.2. 1.5m WIDE CONCRETE SIDEWALK AS PER OPSD 310.010 (SEE SHEET 20) (125mm THICKNESS, Min. 30 MPa STRENGTH WITH GRANULAR 'A' BASE AS REQUIRED TO PROVIDE A LEVELING COURSE FOR THE CONCRETE. AT DRIVEWAYS, CONCRETE DEPTH TO BE Min. 175mm.
   - 5.3. WHEELCHAIR RAMPS REQUIRED AT ALL INTERSECTIONS AS PER OPSD 310.030 (SEE SHEET 20).
   - 5.4. WHEELCHAIR ACCESS SHALL BE PROVIDED AT ALL DRIVEWAY INTERSECTIONS.
   - 5.5. ASPHALT RAMPING SHALL BE PLACED TO SUIT THE WHEELCHAIR RAMPS IF SURFACE COURSE ASPHALT IS NOT INSTALLED AT THE SAME TIME. THESE RAMPS ARE TO BE REMOVED JUST PRIOR TO PLACEMENT OF SURFACE COURSE ASHPALT.
6. ROAD SUBDRAINS
   - 6.1. 100mm FILTER WRAPPED CORRUGATED SLOTTED P.E. PLASTIC PIPE SUBDRAINS TO BE INSTALLED CONTINUOUSLY BELOW THE CURB AND GUTTER AND CONNECTED TO THE CB's. AS PER TOWN OF CALEDON STANDARD No. 219 (SEE STANDARD SHEET 19).
7. AS PER THE GEOTECHNICAL REPORT, THE MINIMUM PAVEMENT DESIGN SHALL BE AS FOLLOWS:

	MERCHANT ROAD	SPEIRS GIFFEN AVE	COMPACTION REQUIREMENTS
HOT MIX ASPHALT SURFACE COURSE, OPSS 1150 DFC	40mm	40mm	as per OPSS 310
HOT MIX ASPHALT BINDER COURSE, OPSS 1150 HDBC	90mm	110mm	as per OPSS 310
BASE COURSE OPSS 1010 GRANULAR 'A'	150mm	150mm	a minimum of 100 percent Standard Proctor Maximum Dry Density (ASTM D698)
SUBBASE COURSE, OPSS 1010 GRANULAR 'B'	450mm	450mm	
	DRIVEWAY / FIRE	COMMERCIAL DRIVEWAY/FIRE	
HOT MIX ASPHALT SURFACE COURSE, OPSS 1150 HL 3	40mm	40mm	as per OPSS 310
HOT MIX ASPHALT BINDER COURSE, OPSS 1150 HL 8	100mm	80mm	as per OPSS 310
BASE COURSE OPSS 1010 GRANULAR 'A'	150mm	150mm	100 percent of Standard Proctor Maximum Dry Density (ASTM D698)
SUBBASE COURSE, OPSS 1010 GRANULAR 'B'	450mm	350mm	

INTERIM 3.0m WIDE GRANULAR ACCESS MAINTENANCE TRAIL:

1. AS PER THE REGION OF PEELS RECOMMENDATIONS:

	DEPTH	COMPACTION REQUIREMENTS
50mm CRUSHER LIMESTONE ON TOP OF TENSAR GEOGRID AND TERAFIX FILTER CLOTH TYPE 270R OR APPROVED EQUAL.	350mm	"IN THIN LIFTS" COMPACTED TO 100% SPD.

COMPACTION REQUIREMENTS

1. ALL COMPACTION REQUIREMENTS TO MEET THE REQUIREMENTS AS OUTLINED IN THE GEOTECHNICAL REPORT.
2. ALL BEDDING AND BACKFILL MATERIAL, ROAD SUB-GRADES AND GENERALLY ALL MATERIALS USED FOR LOT GRADING AND FILL SECTIONS, ETC., SHALL BE COMPACTED TO MIN. 95% SPMDD, WHILE THE UPPER ZONE (WITHIN 1.2m OF THE DESIGN SUBGRADE) SHOULD BE COMPACTED TO A MINIMUM OF 98% SPMDD.
3. THE PAVEMENT SUBGRADE SHOULD BE PROOF-ROLLED WITH A HEAVY RUBBER TIRE VEHICLE (SUCH AS A GRADER) AND ANY LOOSE, SOFT, WET OR UNSTABLE AREAS SHOULD BE SUB-EXCAVATED, AND BACKFILLED WITH CLEAN EARTH FILL MATERIAL PLACED IN 150mm LIFTS (OR LESS) AND COMPACTED TO A MINIMUM OF 100% SPMDD.
4. APSHALT MATERIALS SHALL BE ROLLED AND COMPACTED AS PER OPSS 310.
5. THE GRANULAR AND ASPHALT PAVEMENT MATERIALS AND THEIR PLACEMENT SHOULD CONFORM TO OPSS FORMS 310, 501, 1010, AND 1150 AND THE TOWN / REGION SPECIFICATIONS.
6. FOR ALL SEWERS AND WATERMAINS IN FILL SECTIONS, THE COMPACTION SHALL BE CERTIFIED BY A GEOTECHNICAL ENGINEER PRIOR TO LAYING OF PIPE.
7. WHERE DEWATERING MEASURES ARE TO BE IMPLEMENTED IN SECTIONS OF SEWER INSTALLATION, CLAY PLUGS SHOULD BE INSTALLED WITHIN GRANULAR BEDDING AND THE GRANULAR ZONES OF BACKFILL MATERIAL TO HELP PREVENT MIGRATION OF GROUND WATER ALONG THE RELATIVELY FREE DRAINING BEDDING MATERIAL.
8. CLAY PLUGS SHOULD BE PLACED IN TRENCHES AT 50m INTERVALS (OR LESS) ALONG THE FULL LENGTH OF THE WATER TRENCH, WHERE THE INVERT OF THE TRENCH IS BELOW THE WATER TABLE. THE PLUG SHOULD BE AT LEAST 1.0m THICK (MEASURED ALONG THE PIPE) AND SHOULD SHOULD COMPLETELY REPLACE THE BEDDING AND RELATIVELY PERVIOUS BACKFILL. THE CLAY PLUGS MUST BE COMPACTED TO A MINIMUM OF 95% SPMDD.

WATERMAINS:

1. GENERAL
   - 1.1. CONSTRUCTION OF WATERMAINS AND PRIVATE SERVICES SHALL BE IN ACCORDANCE WITH THE REGION OF PEEL PUBLIC WORKS DESIGN, SPECIFICATIONS AND PROCEDURES MANUAL (LATEST EDITION) AND MINISTRY OF ENVIRONMENT (MOE) GUIDELINES (LATEST EDITION).
   - 1.2. WHERE NON-METALLIC PIPE (PVC, CONCRETE PRESSURE PIPE) IS INSTALLED, A 12-GAUGE TWU STRANDED COPPER, LIGHT COLOURED PLASTIC COATED TRACER WIRE MUST BE INSTALLED WITH AND ALONG THE PIPE AND BROUGHT TO THE SURFACE AT EACH VALVE BOX/CHAMBER AND HYDRANT (AROUND PORT). TRACER WIRE IS TO BE ATTACHED TO THE PIPE AND OUTSIDE OF EACH VALVE BOX BY MEANS OF TAPE.
   - 1.3. ALL FITTINGS SHALL BE RESTRAINED WHERE REQUIRED BY THE DESIGN OR BY THE REGION.
   - 1.4. STAINLESS STEEL BOLTS AND NUTS ARE TO BE USED ON ALL FITTINGS AND JOINT RESTRAINTS.
   - 1.5. CATHODIC PROTECTION IS REQUIRED ON ALL METALLIC FITTINGS, VALVES AND JOINT RESTRAINTS MUST BE WRAPPED END TO END WITH AN APPROVED CORROSION PROTECTION SYSTEM THAT INCLUDES PETROLATUM PRIMER (PASTE), PETROLATUM MOULDING, AND LOW TEMPERATURE PETROLATUM TAPE.
   - 1.6. ALL SYSTEM COMPONENTS ARE TO BE EITHER TO THE REGION OF PEEL STANDARDS OR ONTARIO PROVINCIAL STANDARD DRAWING (OPSD), WHERE A REGION STANDARD EXISTS, IT SHALL BE USED IN PLACE OF THE OPSD STANDARD.
   - 1.7. ALL LIVE TAPPING AND OPERATION OF EXISTING REGIONAL WATER VALVES SHALL BE ARRANGED THROUGH THE REGIONAL INSPECTOR ASSIGNED OR BY CONTACTING THE WATER DIVISION.
   - 1.8. THE NEW WATERMAIN MUST BE ISOLATED FROM THE EXISTING WATERMAIN TO MAINTAIN PRESSURE IN THE NEW MAIN DURING INSTALLATION OF SERVICES. PROPER SIZE BY-PASS WITH THE APPROVED DIFFERENTIAL BACKFLOW PREVENTER TO BE INSTALLED AROUND THE CLOSED OPERATING VALVE.
   - 1.9. ANY JOINT DEFLECTION SHALL BE 50% OF MANUFACTURER'S SPECIFICATIONS. PIPER BARREL DEFLECTION IS PROHIBITED WHEN USING PVC PIPE.
2. LOCATIONS
   - 2.1. MINIMUM HORIZONTAL SEPARATION BETWEEN SEWERS AND WATERMAINS SHALL BE IN ACCORDANCE WITH TOWN OF CALEDON STANDARD No. 211 (SEE DETAIL, SHEET 16) AND HAVE A MINIMUM HORIZONTAL SEPERATION OF 2.5m, AS PER THE REGION OF PEEL VERTICAL CLEARANCE BETWEEN SEWERS AND WATERMAINS THAT CROSS TO BE 500mm BETWEEN THE OUTSIDE OF THE WATERMAIN AND OUTSIDE OF THE SEWER AS PER MOE DESIGN CRITERIA.
   - 2.2. THE MINIMUM LATERAL DISTANCE BETWEEN WATER SERVICES AND OTHER UTILITIES SHALL BE 1.2m.
3. DEPTH
   - 3.1. ALL WATER SERVICES TO BE INSTALLED WITH A MINIMUM OF 2.4m COVER.
   - 3.2. REFER TO STD DWG 1-5-8 FOR INSULATION REQUIREMENTS.
4. CROSSINGS
   - 4.1. WHERE WATERMAINS CROSS UNDER A CREEK, THE MINIMUM COVER OVER THE WATERMAIN BELOW THE CREEK BOTTOM SHALL BE AS PER MUNICIPAL CLASS ENVIRONMENTAL ASSESSMENT AND CONSERVATION AUTHORITIES REQUIREMENTS. GENERALLY, WHERE WATERMAINS CROSS OVER UTILITIES, A 0.3m MINIMUM CLEARANCE SHALL BE PROVIDED. WHERE WATERMAINS CROSS UNDER UTILITIES, THE MINIMUM CLEARANCE SHALL BE 0.5m.
   - 4.2. FOR A WATERMAIN CROSSING A SANITARY SEWER, WATERMAIN JOINTS ARE TO BE OFFSET A MINIMUM OF 2.5m HORIZONTALLY FROM THE CENTERLINE OF THE SANITARY SEWER.
5. CONSTRUCTION IN FILL AREAS
   - 5.1. "NO WATERMAIN SHALL BE LAID ON FILL UNTIL DENSITY TEST REPORTS HAVE BEEN SUBMITTED TO AND APPROVED BY THE CONSULTANT OR REGION. FILL SHALL BE PLACED TO 0.6m MINIMUM ABOVE THE TOP OF WATERMAIN GRADES AND COMPACTED TO THE MINIMUM OF 100% STANDARD PROCTOR MAXIMUM DRY DENSITY (SPMDD) IN 0.3m LIFTS. TESTS SHALL BE TAKEN ALONG THE CENTERLINE OF THE PROPOSED WATERMAIN. ALL FITTINGS AND BRANCH VALVES IN FILL AREAS SHALL BE TIED WITH TIE RODS IN ADDITION TO CONCRETE BLOCKING ACCORDING TO THE FOLLOWING:

   THRUST BLOCKING

   CONCRETE THRUST BLOCKS SHALL BE INSTALLED AT ALL TEES, HORIZONTAL BENDS, HYDRANTS END OF MAINS AND CONNECTIONS 100mm TO 300mm DIAMETER AS PER REGIONAL STANDARDS. ALL 400mm DIAMETER WATERMAINS AND LARGER SHALL HAVE RESTAINED JOINTS. CALCULATIONS WILL BE REQUIRED FROM THE CONSULTANT TO DETERMINE THE M NUMBER OF JOINTS TO BE RESTRAINED BEYOND THE BEND.

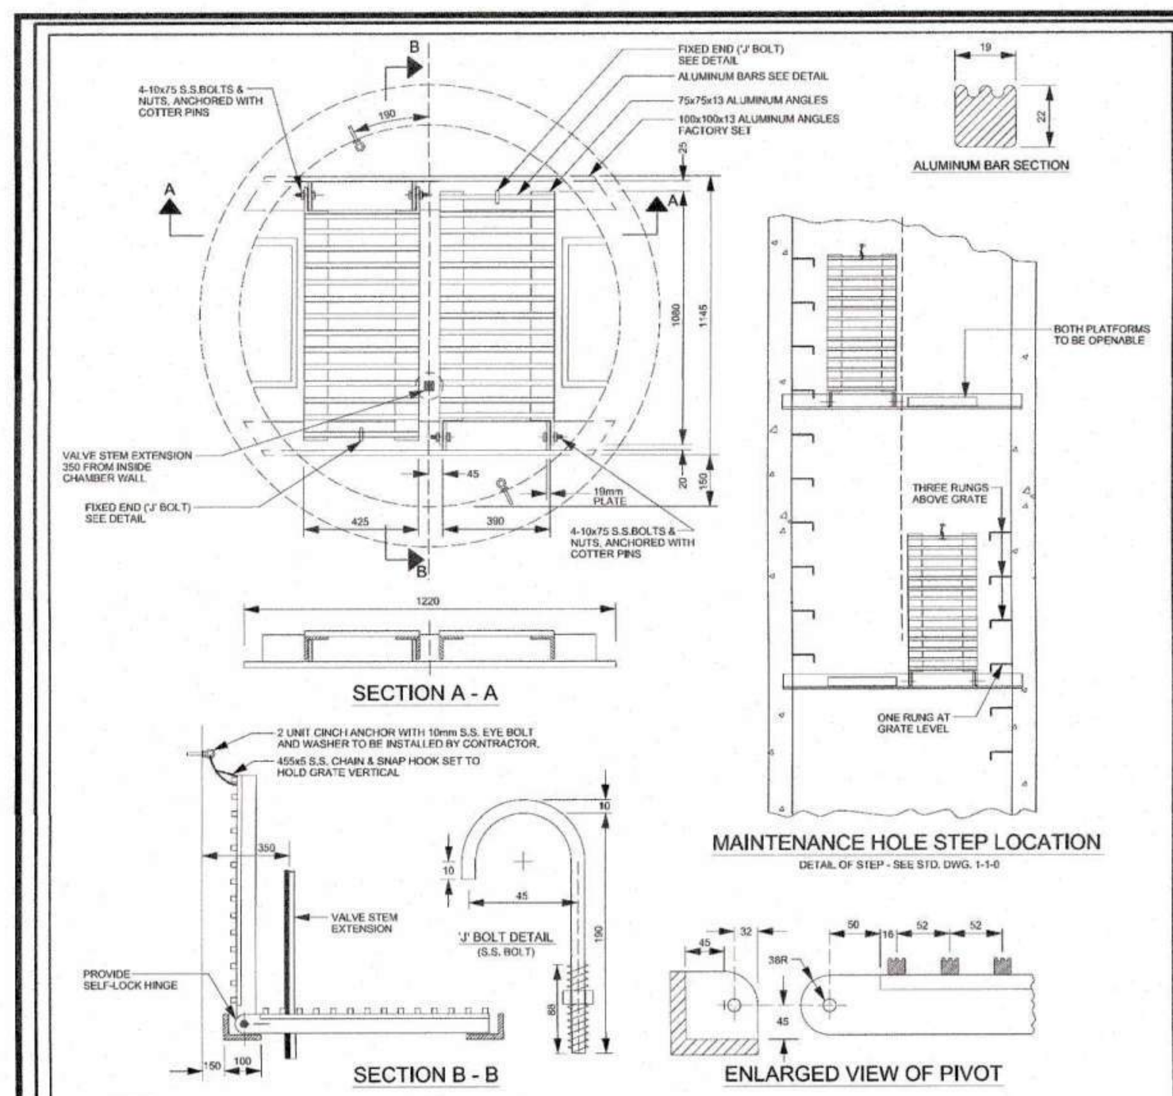
   ALL THRUST BLOCK LOCATIONS, WHERE COMPACTED FILL RATHER THAN UNDISTURBED GROUND EXISTS BEHIND THE THRUST BLOCK, THE FOLLOWING ADDITIONAL PROCEDURE SHALL BE FOLLOWED:

   ALL SEGMENTS OF THE FITTING AND THE WATERMAIN AT THE THRUST BLOCK LOCATION SHALL BE TIED USING APPROVED RESTRAINING DEVIES INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS (TIE RODS AND CLAMPS SHALL BE PROTECTED USING CATHODIC PROTECTION AND CORROSION PREVENTION TAPE).

   IMPORTED GRANULAR FILL (OPS GRANULAR "B" OR EQUIVALENT) IS TO BE USED BEHIND THE THRUST BLOCK AND FOR A MINIMUM DISTANCE OF 2m EACH SIDE OF THE THRUST BLOCK. THIS IMPORTED GRANULAR FILL SHALL BE COMPACTED TO A MINIMUM OS 100% STANDARD PROCTOR DENSITY. PRIOR TO CONSTURCTING THE THRUST BLOCKS, THE CONTRACTOR SHALL OBTAIN WRITTEN APPROVAL FOR BACKFILL FROM A LICENSDED GEOTECHNICAL ENGINEER."
6. LINE VALVES
   - 6.1. ALL VALVE BOXES TO BE SET TO SURFACE GRADE.
   - 6.2. CORROSION PROTECTION TAPE AND ZINC ANODE CAPS SHALL BE APPLIED TO ALL VALVES LOCATED WITHIN CHAMBERS.
   - 6.3. ALL VALVES 300mm AND SMALLER SHALL BE EQUIPPED WITH VALVE BOXES AND RESTRAINED.
   - 6.4. A 12-GAUGE TWU STRANDED COPPER, LIGHT COLOURED PLASTIC COATED TRACER WIRE MUST BE INSTALLED WITH AND ALONG THE PIPE AND BROUGHT TO THE SURFACE AT EACH VALVE BOX/CHAMBER. TRACER WIRE IS TO BE ATTACHED TO THE PIPE OUTSIDE OF EACH VALVE BOX BY MEANS OF TAPE.
   - 6.5. TRACER WIRE IS TO BE LOOPED THROUGH A HOLE IN THE SIDE OF THE VALVE BOX AS PER STD DWG 1-3-11 (SEE DETAIL SHEET 20).
   - 6.6. ALL VALVE BOXES AND HYDRANTS ARE TO BE PROTECTED DURING CONSTRUCTION.
   - 6.7. WATERTIGHT BOLT DOWN COVERS SHALL BE PROVIDED ON ALL CHAMBERS THAT ARE SUSCEPTIBLE TO FLOODING OR VANDALISM.
   - 6.8. EACH CHAMBER WILL REQUIRE EXTENDED VENTS. THE ELEVATIONS OF THE VENTS SHALL BE ABOVE REGIONAL FLOOD LINES AS DETERMINED BY THE APPROPRIATE CONSERVATION AUTHORITY.
7. SERVICES
   - 7.1. WATERMAIN SERVICES ARE TO BE INSTALLED PERPENDICULAR TO THE PROPOSED WATERMAIN AND STRAIGHT INTO THE BUILDING.
   - 7.2. ALL SERVICES SHALL HAVE CURB STOPS AND BOXES INSTALLED AT THE STREET LINE, BE FLUSH WITH GRADE AND ACCESSIBLE AT ALL TIMES. REDUCING CURB STOPS SHALL NOT BE USED.
   - 7.3. ALL WATER SERVICES SHALL HAVE THE SAME SIZE MAINSTOP AS THE SERVICE PIPE. MAINSTOPS ARE NOT REQUIRED ON WATER SERVICES OFF 50mm DIAMETER COPPER WATERMAINS.
   - 7.4. SERVICE CONNECTIONS SHALL BE AS PER STD. DWG 1-8-6 (SEE DETAIL SHEET 17).
   - 7.5. 50mm DIAMETER BLOW-OFFS ARE TO BE INSTALLED AT THE STREET LINE FOR ALL DEAD-ENDED LONG (GREATER THAN 10m) INDUSTRIAL WATER SERVICES, UNLESS OTHER METHODS ARE AVAILABLE FOR BLEEDING OFF, CHARGING AND FLUSHING OF THE SERVICE
   - 7.6. ALL CONNECTIONS TO PVC PIPES TO BE MADE USING AN APPROVED WIDE BRANCH SERVICE SADDLE. DIRECT TAPPING IS NOT ALLOWED TO PVC WATERMAINS. TRACER WIRE TO BE INSTALLED AS PER STD. DWG. 1-7-1.
8. HYDRANTS
   - 8.1. FIRE HYDRANTS TO BE INSTALLED AS PER REGION STD. DWG 1-6-1 (SEE SHEET 17) AND 1-6-2 WITH FLANGE SET BETWEEN 50mm AND 150mm ABOVE FINISHED GRADE.
   - 8.2. ALL HYDRANTS SHALL HAVE 150mm BRANCH VALVES AND BOXES. HYDRANT BRANCH TEES FROM BE AS PER STD. DWG. 1-6-1 (SEE SHEET 17) AND 1-6-2.
   - 8.3. ALL HYDRANTS SHALL HAVE MINIMUM 1.2m MINIMUM HORIZONTAL CLEARANCE FROM ALL UTILITIES AND STRUCTURES MEASURED FROM THE NEAREST POINT OF THE STRUCTURE. HYDRANTS NEAR DRIVEWAYS SHALL BE LOCATED A MINIMUM OF 1.25m CLEAR FROM THE PROJECTED GARAGE OR EDGE OF DRIVEWAY, WHICHEVER IS GREATER.
   - 8.4. THE HYDRANT SAFETY BREAKAWAY FLANGE MUST BE LOCATED 50mm TO 150mm ABOVE THE FINISHED GRADE AND FIELD ADJUSTED IF REQUIRED.
9. THRUST BLOCKS
   - 9.1. THRUST BLOCKING OF WATERMAIN TO BE INSTALLED AS PER STD. 1-5-4 (SEE SHEET 16), 1-5-5 (SEE SHEET 16), AND 1-5-7 (SEE SHEET 17).
10. AIR VALVES AND DRAIN VALVES
    - 10.1. FOR WATERMAINS 400mm DIAMETER AND LARGER, PROVISION FOR AIR RELEASE AND DRAINAGE IS REQUIRED AT THE HIGH AND LOW POINTS RESPECTIVELY. THIS PROVISION MAY BE INCORPORATED WITH THE LINE VALVE CHAMBER OR IN SEPERATE CHAMBERS. REFER TO STD. DWG 1-3-5 (AIR VALVE)
11. BEDDING
    - 11.1. BEDDING FOR WATERMAINS SHALL BE PER REGION STD. DWG. 1-5-1 (SEE SHEET 16) AND 1-5-2.

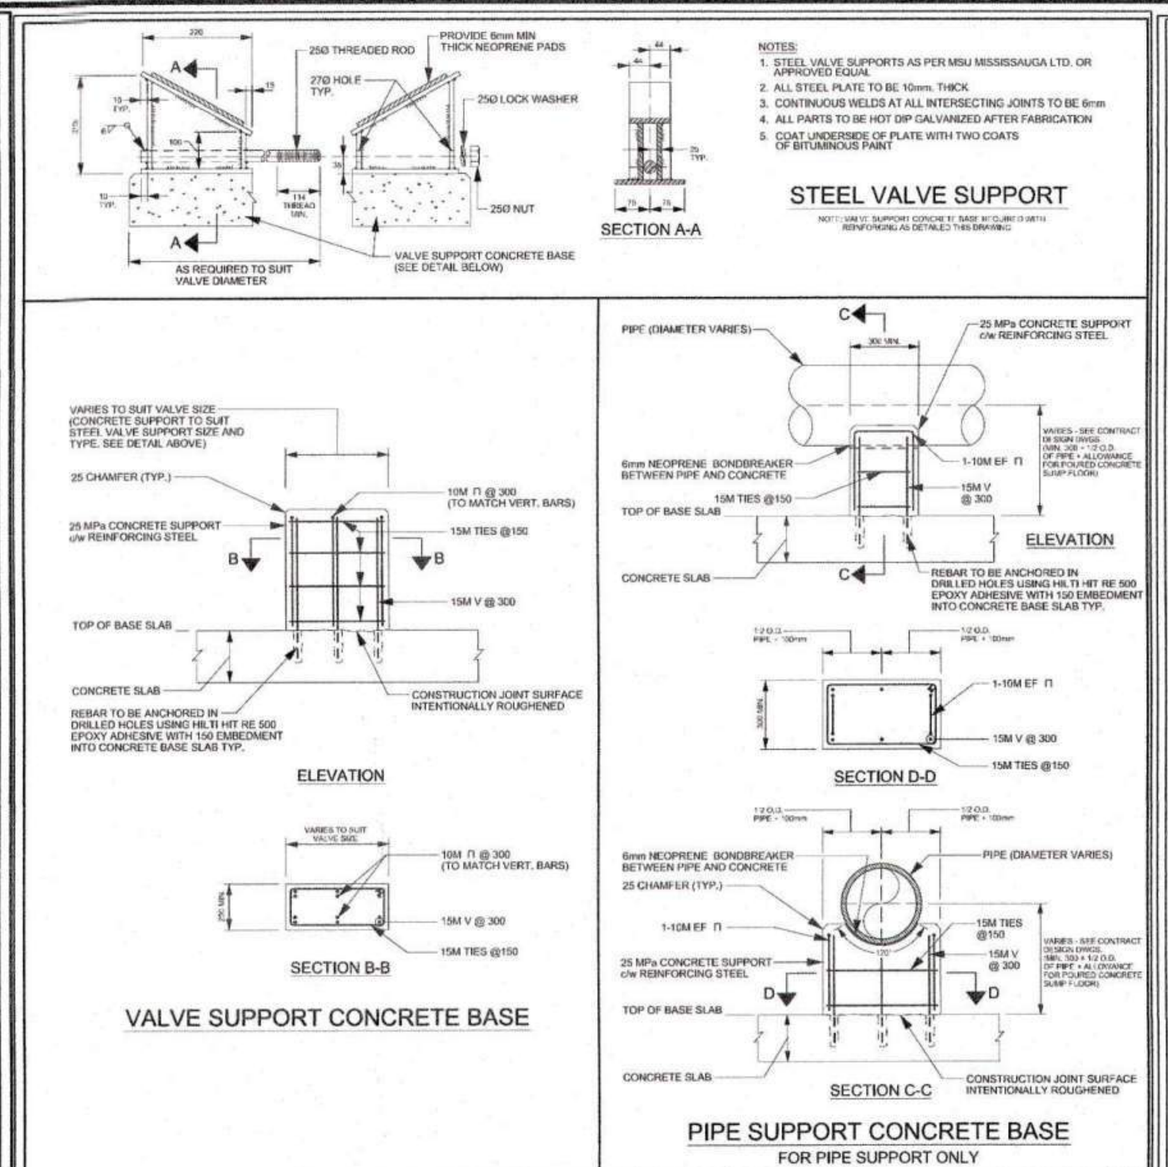
SANITARY SEWERS:

1. GENERAL
   - 1.1. ALL SYSTEM COMPONENTS ARE TO BE EITHER TO THE REGION OF PEEL STANDARDS OR ONTARIO PROVINCIAL STANDARD DRAWING (OPSD). WHERE A REGION STANDARD EXISTS, IT SHALL BE USED IN PLACE OF THE OPSD STANDARD.
   - 1.2. SANITARY SEWERS IN FILL SECTIONS, THE COMPACTION SHALL BE CERTIFIED BY A GEOTECHNICAL ENGINEER PRIOR TO LAYING OF PIPE.
   - 1.3. PROPOSED SANITARY MAINLINE SEWER'S SHALL BE REINFORCED CONCRETE, CSA 257.2, 140-D.
   - 1.4. FLOW VELOCITIES SHALL BE DETERMINED IN ACCORDANCE WITH GUIDELINES OUTLINED IN THE REGION OF PEEL PUBLIC WORKS DESIGN CRITERIA MANUAL.
   - 1.5. DEFORMATION GAUGE TEST (PIG) IS REQUIRED ON ALL PIPE WORKS PRIOR TO MAINTENANCE AND ACCEPTANCE. ALL PIPE WORKS SHALL HAVE A VIDEO TAPING COMPLETE AS PART OF THE PRELIMINARY AND ASSUMPTION INSPECTIONS.
2. MAINTENANCE HOLES
   - 2.1. FRAME AND COVERS SHALL BE AS PER REGION STD. DWG. 2-5-13 (SEE SHEET 17).
   - 2.2. DROP MAINTENANCE HOLES SHALL BE PROVIDED WHERE THE DIFFERENCE IN INVERT ELEVATION IS GREATER THAN 0.90m. THE DROP PIPE SHALL BE ONE SIZE SMALLER THEN THE SEWER LINE (MINIMUM 250mm). (SEE STANDARD 2-5-26, SHEET 18).
   - 2.3. ALL MAINTENANCE HOLES SHALL CONFORM TO THE CURRENT MANUFACTURER'S APPROVED PRODUCTS LIST, SANITARY SEWER AND APPERTENANCES, REGION OF PEEL STANDARD DRAWING 2-5-3, 2-5-4 (REFER TO STANDARDS ON SHEET 17).
   - 2.3. WHERE DEPTH FROM INVERT TO TOP OF A MAINTENANCE HOLE EXCEEDS 5.0m, A SAFETY PLATFORM IS TO BE PROVIDED AS PER PEEL REGIONAL STANDARD 2-6-13 TO 2-6-15 (SEE STANDARD ON SHEET 18).
   - 2.4. MAXIMUM SPACING OF MAINTENANCE HOLES SHALL BE 120m FOR SANITARY SEWERS UP TO 600mm IN SIZE. FOR SANITARY SEWERS GREATER THAN 600mm IN SIZE, THE MAXIMUM SPACING SHALL BE 170m.
3. SIZING
   - 3.3. MAINLINE SANITARY SEWER PIPE SIZE SHALL BE MINIMUM 375mm DIAMETER.
   - 3.4. MINIMUM HORIZONTAL SEPARATION BETWEEN SANITARY SEWERS AND STORM SEWERS SHALL BE 2.0m IF BOTH SEWERS ARE AT THE SAME RELATIVE ELEVATION, IF THE SEWER INVERTS VARY MORE THAN 1.0m, A MINIMUM HORIZONTAL SEPARATION OF 3.0m SHALL BE MAINTAINED.
   - 3.5. MINIMUM HORIZONTAL SEPARATION BETWEEN SEWERS AND WATERMAINS SHALL BE 2.5m. VERTICAL CLEARANCE BETWEEN SEWERS AND WATERMAINS THAT CROSS TO BE 500mm BETWEEN THE OUTSIDE OF THE WATERMAIN AND OUTSIDE OF THE SEWER. THE LENGTH OF WATER PIPE SHOULD BE CENTERED AT THE POINT OF CROSSING SUCH THAT JOINTS IN THE WATERMAIN WILL BE EQUIDISTANT AND AS FAR AS POSSIBLE FROM THE SEWER, CROSSING PERPENDICULAR IF POSSIBLE.
4. DEPTH
   - 4.1. THE OBVERT OF THE SANITARY SEWER SHALL BE A MINIMUM OF 2.5m BELOW THE CENTRELINE OF ROAD.
   - 4.2. IN ALL CASES, THE PROPOSED SANITARY SEWER SHALL BE INSTALLED AT SUFFICIENT DEPTH TO SERVICE LANDS EXTERNAL TO THE SITE AS DETERMINED BY THE REGION OF PEEL.
5. CREEK CROSSINGS
   - 5.1. IN VALLEYS , THE SANITARY SEWER SHALL BE A MINIMUM 1.4m BELOW THE CREEK BOTTOM.
   - 5.2. A PERMIT FROM THE TORONTO REGIONAL CONSERVATION AUTHORITY IS REQUIRED FOR A CREEK CROSSING.
6. SPECIAL DESIGN CONSIDERATIONS
   - 6.1. SPECIAL CONSIDERATIONS FOR WATER TIGHT JOINTS IS TO BE APPLIED WHEN PIPE IS BURIED TO A DEPTH WHERE SIGNIFICANT HYDROSTATIC PRESSURES ARE ANTICIPATED.
   - 6.2. WHERE SIGNIFICANT SECTIONS OF SANITARY SEWERS ARE PROVIDED WITH WATERTIGHT COVERS, EXTENDED VENTS WILL BE REQUIRED AT EVERY THIRD MAINTENANCE HOLE AS PER PEEL REGIONAL STANDARD DRAWING 2-5-22, SEE STANDARD, SHEET 18).
7. BEDDING AND COMPACTION
   - 7.1. ALL SANITARY SEWER BEDDING AS PER REGION STD. DWG. 2-3-1 (REFER TO STANDARD ON SHEET 18).
   - 7.2. GRANULAR BEDDING MATERIAL SHOULD CONSIST OF WELL GRADED, FREE DRAINING SOIL, SUCH AS OPSS GRANULAR 'A' OR 19mm CRUSHER RUN LIMESTONE OR ITS EQUIVALENT AS PER THE PERTINENT TOWN / REGION SPECIFICATIONS.
   - 7.3. THE BEDDING MATERIALS SHOULD BE PLACED IN 150mm LIFTS AND COMPACTED TO A MINIMUM OF 100% SPMDD, SEE REGION OF PEEL STANDARD 2-3-1 (REFER TO STANDARD ON SHEET 18).
8. SANITARY SERVICES
   - 8.1. IN INDUSTRIAL AREAS, THE MINIMUM SIZE OF SANITARY LATERALS SHALL BE 150mm, INSTALLED WITH A MINIMUM GRADE OF 1% AND A MAXIMUM GRADE OF 2%.
   - 8.2. THE MINIMUM AND MAXIMUM COVER OF SANITARY LATERALS SHALL BE 2.00m AND 2.75m RESPECTIVELY, UNLESS CIRCUMSTANCES REQUIRE OTHERWISE.
   - 8.3. THE MAXIMUM DROP ACROSS A PROPERTY LINE



NOTE
1. THIS DRAWING SUPPLEMENTAL TO OPSD 404.020 AND 404.022
2. ALUMINUM TO BE OF APPROVED ALLOY. AT ALL POINTS WHERE ALUMINUM AND CONCRETE COME INTO CONTACT (ENDS OF ANGLES) ALUMINUM SURFACES TO BE COATED WITH ZINC CHROMATE OR TWO COATS OF STATIC ASPHALT PAINT.
3. PLATFORMS MUST BE USED FOR MAINTENANCE HOLE DEPTHS GREATER THAN 5m. FOR MAINTENANCE HOLE DEPTH BETWEEN 5m AND 10m, PLATFORM TO BE PLACED AT MIDPOINT. FOR MAINTENANCE HOLE DEPTH BETWEEN 10m AND 15m, PLATFORMS TO BE PLACED AT THIRD POINTS.
4. ALTERNATE TO CHAIN IS SELF LOCKING GATE.
5. WHERE PLATFORMS ARE REQUIRED, INSIDE DIAMETER OF CHAMBER TO BE MIN. 1500mm

Region of Peel working with you | PUBLIC WORKS STANDARD DRAWING | REV. DATE: NOVEMBER 2011
SAFETY PLATFORM FOR 1500mm DIAMETER PRECAST MAINTENANCE HOLE | STD. DWG. NUMBER 1-2-1 | SCALE N.T.S.



NOTE
1. PROVIDE 6mm NEOPRENE BOND BREAKER AT ALL CONTACT POINTS BETWEEN PIPES, VALVES AND CONCRETE SUPPORTS

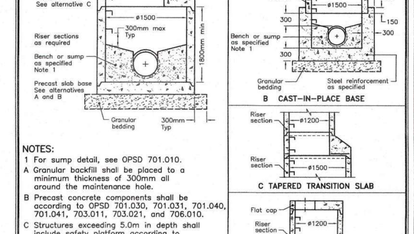
1	STANDARD No. 600 NOW 220		JUNE 08

STANDARD No. 220



NOTES:
1 For sump detail, see OPSD 701.010.
A Granular backfill shall be placed to a minimum thickness of 300mm all around the maintenance hole.
B Precast concrete components shall be according to OPSD 701.030, 701.031, 701.040, 701.041, 703.011, 703.021, and 706.010.
C Structures exceeding 5.0m in depth shall include safety platform according to OPSD 404.020 or 404.021.
D Pipe support shall be according to OPSD 708.020.
E For benching and pipe opening details, see OPSD 701.021.
F For adjustment unit and frame installation, see OPSD 704.010.
G All dimensions are nominal.
H All dimensions are in millimetres unless otherwise shown.

Table of Contents

One (1) map was created for the Site to show groundwater contours of the overburden water-bearing zone (Figure 6). Accordingly, the groundwater flow directions in overburden interpreted to be southeast and southwest of the Site.

Groundwater levels are expected to show seasonal fluctuations and vary in response to prevailing climate conditions. This may also affect the direction and rate of flow. It is recommended to conduct seasonal groundwater level measurements to provide more information on seasonal groundwater level fluctuations.

3.3 Hydraulic Conductivity Testing

Four (4) Single Well Response Tests (SWRT's) were completed on monitoring wells BH/MW 1, BH/MW 9, BH/MW 16, and BH/MW 25 on October 7 and 12, 2021. The tests were completed to estimate the saturated hydraulic conductivity (K) of the soils at the well screen depths. Please note that SWRT was not possible to conduct for BH/MW 30 since the well was dry during the monitoring period.

The static water level within each monitoring well was measured prior to the start of testing. In advance of performing SWRTs, each monitoring well underwent development to remove fines introduced into the screens following construction. The development process involved purging of the monitoring wells to induce the flow of fresh formation water through the screen. Each monitoring well was permitted to fully recover prior to performing SWRTs.

Hydraulic conductivity values were calculated from the SWRT and constant rate test data as per Hvorslev's solution included in the Aqtesolv Pro. V.4.5 software package. The semi-log plots for normalized drawdown versus time are included in Appendix C.

A summary of the hydraulic conductivities (K-values) estimated from the SWRTs are provided in Table 3-2.

Table 3-2: Summary of Hydraulic Conductivity Testing

Monitoring Well	Well Depth (mbgs)	Screen Interval (mbgs)		Soil Formation Screened	Estimated Hydraulic Conductivity (m/s)
		from	to		
BH/MW 1	7.60	4.60	7.60	Clayey Silt Till and Sandy Silt Till	3.1E-06
BH/MW 9	7.57	4.57	7.57	Clayey Silt Till and Sandy Silt Till	4.0E-07
BH/MW 16	7.49	4.49	7.49	Clayey Silt Till	3.3E-07
BH/MW 25	7.55	4.55	7.55	Clayey Silt Till	3.9E-07
				Highest Estimated K Value	3.1E-06
				Geometric Mean of Estimated K values	6.3E-07

SWRTs provide K-estimates of the geological formation surrounding the well screens and may not be representative of bulk formation hydraulic conductivity. As shown in Table 3-2, the highest K-value of the tested water-bearing zone is 3.1E-06 m/s, and the geometric mean of the K-values is 6.3E-07 m/s.

3.4 Groundwater Quality

To assess the suitability for discharging pumped groundwater into the sewers owned by the Regional Municipality of Peel / City of Mississauga during dewatering activities, one (1) groundwater sample was collected from monitoring well BH/MW 1 on October 12, 2021, using a peristaltic pump.

Prior to collecting the noted water sample, approximately three (3) standing well volumes of groundwater were purged from the referred well. The samples were collected unfiltered and placed into pre-cleaned laboratory-supplied vials and/or bottles provided with analytical test group specific preservatives, as required. Dedicated nitrile gloves were used during sample handling. The groundwater samples were submitted for analysis to Bureau Veritas Laboratory, a CALA certified independent laboratory in Mississauga, Ontario. Analytical results are provided in Appendix D.

Table 3-3 summarizes exceedance(s) of the Sanitary (Table 1) and Storm (Table 2) Sewer Use By-Law parameters.

When comparing the chemistry of the collected groundwater samples to the Regional Municipality of Peel Sanitary and Combined Sewer Discharge Criteria (By-Law Number 53-2010, Table 1), there were no parameter exceedances to be reported.

When comparing the chemistry of the collected groundwater samples to the Regional Municipality of Peel Storm Sewer Discharge Criteria (By-Law Number 53-2010, Table 2) the following parameters reported an exceedance: Total manganese and Chloroform

Reporting detection limits (RDLs) were below the Sewer Use By-Law parameter criteria of Tables 1 and 2.

Table 3-3: Summary of Analytical Results

Parameter	Units	City of Mississauga / Regional Municipality of Peel Sanitary and Combined Sewer Discharge Limit (Table 1)	City of Mississauga / Regional Municipality of Peel Storm Sewer Discharge Limit (Table 2)	Concentration BH/MW 1 12-Oct-21
Total Manganese (Mn)	µg/L	5,000	50	**78**
Chloroform	µg/L	40	2	**2.8**

Bold – Exceeds City of Mississauga / Regional Municipality of Peel Storm Sewer Discharge Limit (Table 2).

For the short-term dewatering system (construction phase), it is anticipated that TSS levels and some other parameters (for example, Total Metals) in the pumped groundwater may become elevated and exceed both, Sanitary and Storm Sewer Use By-Law limits. To control the concentration of TSS and associated metals, it is recommended that a suitable treatment method be implemented (filtration or decantation facilities and/ or any other applicable treatment system) during construction dewatering activities to discharge to the applicable sewer system. The specifications of the treatment system will need to be adjusted to the reported water quality results by the treatment contractor/process engineer.

The water quality results presented in this report may not be representative of the long-term condition of groundwater quality onsite. As such, regular water quality monitoring is recommended for the post-construction phase, as required by the City.

An agreement to discharge into the sewers owned by the City of Mississauga / Regional Municipality of Peel will be required prior to releasing dewatering effluent.

The Environmental Site Assessment Report(s) shall be reviewed for more information on the groundwater quality conditions at the Site.

3.5 Infiltration Testing

EXP completed four (4) infiltration rate tests (INF 1, INF 9, INF 25 and INF 30) within the Site area on October 7 and 12, 2021. These tests were conducted in proximity of selected monitoring wells: September 7, 2021, at BH/MW 1 (INF 1), BH/MW 9 (INF 9), BH/MW 30 (INF 30) and BH/MW 25 (INF 25).

Infiltration tests were conducted at depths ranged from 0.6 mbgs to 0.9 mbgs. The reported water levels at these monitoring wells are; 4.24 mbgs (BH/MW 1), 5.92 mbgs (BH/MW 9), and <7.58 (BH/MW 30) on October 7, 2021, and 6.66 mbgs (BH/MW 25) on October 12 15, 2021 (Table 3.2).

The stratigraphy of the shallow subsurface comprises a silt/sand with some pebbles. Table 3.5 below shows a summary of field saturated hydraulic conductivity (Kfs) testing and design infiltration rates, as per the Low Impact Development (LID) Stormwater Management Planning and Design Guide, CVC – TRCA, 2010, Appendix G. The estimated field saturated hydraulic conductivities were correlated to infiltration rates based on the relationship provided in Appendix D of the guideline.

Infiltration rate testing locations are shown on Figure 4 and infiltration rate analysis is provided in Appendix E.

Table 3.4: Summary of Infiltration Testing Results

Infiltration Test Location/ MW ID	Depth of Hole (mbgs)	Formation tested	Field Saturated Hydraulic Conductivity, Kfs (cm/s)	Infiltration Rate (mm/hr)
INF 1 (BH/MW 1)	0.60	Clayey Silt Till	3.4×10^{-6}	19
INF 9 (BH/MW 9)	0.75	Clayey Silt Till	3.5×10^{-6}	19
INF 25 (BH/MW 25)	0.90	Clayey Silt Till	2.7×10^{-6}	18
INF 30 (BH/MW 30)	0.70	Clayey Silt to Sandy Silt (Fill)	9.0×10^{-6}	24
		Geometric Mean	4.12×10^{-6}	20
			Design Infiltration Rate*	8 (20/2.5)

Notes:
*Safety Factor of 2.5 was applied to calculate the design infiltration rate (Low Impact Development (LID) Stormwater Management Planning and Design Guide, CVC – TRCA, 2010, Appendix D).

The estimated design infiltration rate based on percolation rate testing for the Site is 8 mm/hr.

A 15 mm precipitation event was utilized for estimating the stormwater volume. The calculation of the stormwater volume is included in Appendix G.

The estimate of the stormwater volume only accounts for direct precipitation into the excavation. The dimensions of the excavation are considered in the dewatering calculations. Runoff from outside of the excavation's footprint is excluded and it should be directed away from the excavation.

During precipitation events greater than 15 mm (ex: 100-year storm), measures should be taken by the contractor to retain stormwater onsite in a safe manner to not exceed the allowable water taking and discharge limits, as necessary. A two (2) and a one hundred (100) year storm events over a 24-hour period are 57.3 and 125.2 mm, respectively, which would produce 2,419 and 5,286 L of water within Building 1 footprint area.

5.4 Results of Dewatering Rate Estimates

5.4.1 Construction Dewatering Rate Estimate

For this assessment, it was assumed that the proposed construction plans include an excavation without shoring system. EXP should be retained to review the assumptions outlined in this section, should a shoring system be included.

Short-term (construction) dewatering calculations are presented in Appendix G.

Based on the assumptions provided in this report, the results of the dewatering rate estimate can be summarized as follows:

Table 4-2 Summary of Construction Dewatering Rate (Without Basement)

Description	Building 1 (Phase 1) (L/day)	Building 2 (Phase 2) (L/day)	Total (L/day)
Estimated Short Term Dewatering Rate (without safety factor or precipitation)	39,000	22,000	61,000
With Factor of Safety of 1.5 (excluding precipitation) for permit	**58,000**	**33,000**	**91,000**
From Precipitation Event of 15 mm in one day for whole building footprint	630,000	450,000	1,080,000
With Factor of Safety of 2.0 (including precipitation) for designs, and budgeting	688,000	483,000	1,171,000
Radius of Influence from sides of excavation (m)	24	25	

It should be noted that the construction dewatering is required mainly to remove rainwater from the excavation after rainfall events. The MECP regulates the groundwater taking and since the estimated flow rate is less than 50,000 L/day then no MECP water taking permit (EASR or PTTW) is required.

The peak dewatering flow rates does not account for flow from utility beddings and variations in hydrogeological properties beyond those encountered during this investigation. Local dewatering may be required for pits (elevator pits, sump pits, raft) and for localized areas with permeable, soft, or wet soil conditions. Local dewatering is not considered to be part of this assessment, but contractor should be ready to install additional system to manage such conditions. Dewatering estimates should be reviewed once the pit dimensions are available.

All grading around the perimeter of the excavation should be graded away from the excavation and ramp/site access to redirect runoff away from excavation.

The contractor is responsible for the design of the dewatering system to ensure that dry conditions are always maintained within the excavation at all costs.

As shown on Table 4.2, more than 90% of the dewatering volume is expected to be required after rainfall events. As such it is suggested to revise the construction plan to reduce the area of excavation kept open at any given point of time.

5.4.2 Post-Construction Dewatering Rate Estimate

As per preliminary Site drawings, it is our present understanding that the proposed Buildings 1 and 2 will be constructed without basements. Therefore, no long-term dewatering requirements are anticipated for the proposed Building 1.

5.5 MECP Water Taking Permits

5.5.1 Short-Term Discharge Rate (Construction Phase)

In accordance with the Ontario Water Resources Act, if the water taking for the construction dewatering is more than 50,000 L/day but less than 400,000 L/day, then an online registration in the Environmental Activity and Sector Registry (EASR) with the MECP will be required. If groundwater dewatering rates onsite exceed 400,000 L/day, a Category 3 Permit to Take Water (PTTW) will be required from the MECP.

As of July 1, 2021, an amendment of O. Reg. 63/16 has come into effect and replaced the former subsection 7 (5) such that the water taking limit of 400,000 L/day would apply to groundwater takings of each dewatered work area only, excluding stormwater.

The dewatering estimates including a safety factor and excluding precipitation is stated below. The MECP construction dewatering rate excludes the precipitation amount and is the rate used for the permit application.

Table 4-4: MECP Construction Dewatering Flow Rate

Scenario	Flow Rate Building 1 (Phase 1) (L/day)	Flow Rate Building 2 (Phase 2) (L/day)	Total Flow Rate Buildings 1 & 2 (L/day)
MECP Construction Dewatering Flow Rate with Safety Factor of 1.5 (excluding rainwater collection)	58,000	33,000	91,000

Based on the estimated construction dewatering rates, an EASR from the MECP will be required to facilitate the construction dewatering program of the Site.

A Discharge Plan (dewatering sketch, sewer discharge agreement) must be developed and applied for any discharges from the Site. Monitoring of both water quantity and water quality must be carried out for the entire duration of the construction dewatering phase. During this phase, the Discharge Plan and the daily water taking records must be available onsite.

The EASR, Discharge Plan, hydrogeological investigation report, and geotechnical assessment of settlements must also be available at the construction Site during the entire construction dewatering. EXP should be notified immediately about any changes to the construction dewatering schedule or design, since the EASR will need to be updated to reflect these

FUNCTIONAL SERVICING AND STORMWATER MANAGEMENT STUDY

FOR

MAYFIELD WEST COMMUNITY

IN THE

TOWN OF CALEDON

NOVEMBER 2007

TABLE OF CONTENTS

3.0 WASTEWATER SERVICING

3.1 Background Information

Town of Caledon commissioned various studies in order to define the servicing requirements for Mayfield West. The following studies were used to define the preliminary wastewater servicing requirements:

- Mayfield West Community Development Plan Study, Existing Water Supply and Sanitary Sewage System, CG&S, November 1996 (Background Studies)
- Mayfield West Community Development Plan Study, Water Supply and Sanitary Sewage System Function Servicing, CG&S, February 1997 (Background Studies)
- Region of Peel Sewer and Watermain Maps
- Region of Peel Design Criteria, October 2000

The Background Studies commissioned by Town of Caledon for water and wastewater are included in ***Appendix A.***

The above documents form the basis of this report.

3.2 Existing Wastewater Services

An existing 525 mm diameter sanitary sewer is located at the intersection of Mayfield Road and Inder Heights Drive. The Background Studies determined that the sewer is able to accommodate sanitary flows from 10,000 people.

An existing 750 mm diameter sanitary sewer is located on Dixie Road, terminating approximately 1,800 metres south of Mayfield Road. Discussions with Region of Peel have confirmed that the capacity of the existing sewer is not a constraint to the development of this community.

The location of the existing sanitary sewers is illustrated in ***Figure 3.***

3.3 Population Assumptions

Residential

In accordance with population projections provided by Town of Caledon, the following residential population is currently being considered:

Mayfield West ➢ 8,500 people
Snells Hollow ➢ 2,000 people

Employment

As of this writing, employment populations have not been finalized. As such, an assumption of 70 people per hectare has been applied in accordance with Region of Peel Design Criteria.

3.4 Proposed Sanitary Servicing

Region of Peel has included an allowance for the ultimate development of Mayfield West in the planning of the existing infrastructure. Accordingly, existing sewer pipes have been sized to convey the predicted Mayfield West flows. Furthermore, major infrastructure such as treatment plants and pump stations has sufficient existing and planned capacity to accommodate the development of the new community.

The Mayfield West community will be serviced by a network of new gravity sewers designed in accordance with Region of Peel design criteria. Two sanitary outlets will be used to service the Mayfield West Community, as follows:

Inder Heights Drive

An existing 525 mm diameter sanitary sewer is located at the intersection of Mayfield Road and Inder Heights Drive. The Background Studies determined that the sewer is able to accommodate sanitary flows from 10,000 people.

It is proposed that the entire residential population in Mayfield West will be directed to the Inder Heights sewer. The total population contribution to Inder Heights is calculated as follows:

Table 1
Population Assumptions

Community	Population
Snells Hollow	1,400
Mayfield Residential	8,500
Mayfield Employment	600
Total	**10,500**

It should be noted that the total Snells Hollow population of 2,000 people has been split between the Inder Heights and Dixie sewers in accordance with the Background Studies. The split has been estimated as 1,400 / 600 (Inder Heights / Dixie).

It should also be noted that since the time of the Background Studies per capita flow generation rates have been reduced, due in large part to recent Building Code amendments which require water conservation fixtures in all new residential construction. As such, it is expected that the additional population can be

accommodated in the Inder Heights sewer. It is recommended that sanitary flows be monitored during buildout of the community to ensure that the capacity of the receiving sewers in not exceeded.

Consideration should also be included for the potential future extension of the Mayfield West urban boundary up to Old School Road. Assuming the same residential land use and population density as the existing community, there is the potential for approximately 25.8 hectares of residential development which will drain to the Inder Heights sewer. This corresponds to 258 units and an additional population of 902. As stated previously, flow monitoring is recommended to ensure that the capacity of the receiving sewers in not exceeded.

Dixie Road

An existing 750 mm diameter sanitary sewer is located on Dixie Road, terminating approximately 1,800 metres south of Mayfield Road. Discussions with Region of Peel have confirmed that the capacity of the existing sewer is not a constraint to the development of this community.

The employment lands and the research campus will be directed to the Dixie Road sewer.

Consideration should also be included for the potential future extension of the Mayfield West urban boundary up to Old School Road. Assuming the same residential and employment land use and population density as the existing community, there is the potential for approximately 18.0 hectares of residential development and 90.6 hectares of employment development which will drain to the Dixie sewer. For the residential component, this corresponds to 180 residential units and an additional residential population of 630. For the employment component, this corresponds to an additional residential population of 4,530.

The conceptual sanitary sewer plan is illustrated in ***Figure 3***. The conceptual sanitary profiles are illustrated in ***Appendix B.***

3.5 Permanent Sanitary Pump Station

A permanent pump station is required in order to convey sanitary flows from approximately 65.7 hectares originating in the north-west portion of the residential lands (between Kennedy Road and Hwy 10). A gravity sewer cannot provide service to this area for the following reasons:

- The elevation of Etobicoke Creek precludes a gravity crossing on Hwy 10 to the west, as the valley is several metres lower than the lowest possible sewer invert.

- The low grades in this area cannot be serviced to the new internal trunk sewer to the east.

The peak sanitary flow generated from this area is estimated as 43 l/s.

The pump station will discharge by forcemain to the new internal trunk sewers located to the east.

As mentioned previously, the sewer design has regard for the possible expansion of Mayfield West up to Old School Road. If the Inder Heights sewer is found to be constrained by the expansion population, it is recommended that the pump station flows be redirected to Hwy 10 via a new forcemain. The flows will be pumped under Etobicoke Creek and drained by a new gravity sewer ultimately connecting to the Valleywood Subdivision. The redirection of flows would be a requirement of the future expansion area, and would only be triggered by a limitation in downstream capacity as identified through flow monitoring.

4.0 WATER SERVICING

4.1 Background Information

Town of Caledon commissioned various studies in order to define the servicing requirements for Mayfield West. The following studies were used to define the preliminary water servicing requirements:

- Mayfield West Community Development Plan Study, Existing Water Supply and Sanitary Sewage System, CG&S, November 1996 (Background Studies)
- Mayfield West Community Development Plan Study, Water Supply and Sanitary Sewage System Function Servicing, CG&S, February 1997 (Background Studies)
- The Region of Peel, Development Charges, March 27, 2007 (Background Studies)
- Region of Peel Sewer and Watermain Maps
- Region of Peel Design Criteria

The above documents form the basis of this report.

4.2 Existing Watermains

Existing watermains are currently available in the vicinity of Mayfield West as shown in ***Figure 4.***

The Region of Peel will be constructing the Mayfield West elevated tank at the corner of Kennedy Road and King Street, located to the north of the study area. The project will also include the construction of a new 600 mm transmission main and a new 400 mm distribution main on Kennedy Road.

FUNCTIONAL SERVICING AND STORMWATER MANAGEMENT STUDY

FOR

MAYFIELD WEST COMMUNITY

IN THE

TOWN OF CALEDON

NOVEMBER 2007

The peak sanitary flow generated from this area is estimated as 43 l/s.

The pump station will discharge by forcemain to the new internal trunk sewers located to the east.

As mentioned previously, the sewer design has regard for the possible expansion of Mayfield West up to Old School Road. If the Inder Heights sewer is found to be constrained by the expansion population, it is recommended that the pump station flows be redirected to Hwy 10 via a new forcemain. The flows will be pumped under Etobicoke Creek and drained by a new gravity sewer ultimately connecting to the Valleywood Subdivision. The redirection of flows would be a requirement of the future expansion area, and would only be triggered by a limitation in downstream capacity as identified through flow monitoring.

4.0 WATER SERVICING

4.1 Background Information

Town of Caledon commissioned various studies in order to define the servicing requirements for Mayfield West. The following studies were used to define the preliminary water servicing requirements:

- Mayfield West Community Development Plan Study, Existing Water Supply and Sanitary Sewage System, CG&S, November 1996 (Background Studies)
- Mayfield West Community Development Plan Study, Water Supply and Sanitary Sewage System Function Servicing, CG&S, February 1997 (Background Studies)
- The Region of Peel, Development Charges, March 27, 2007 (Background Studies)
- Region of Peel Sewer and Watermain Maps
- Region of Peel Design Criteria

The above documents form the basis of this report.

4.2 Existing Watermains

Existing watermains are currently available in the vicinity of Mayfield West as shown in ***Figure 4.***

The Region of Peel will be constructing the Mayfield West elevated tank at the corner of Kennedy Road and King Street, located to the north of the study area. The project will also include the construction of a new 600 mm transmission main and a new 400 mm distribution main on Kennedy Road.

Construction of the elevated tank and Zone 7 watermains is scheduled for fall of 2007.

4.3 Proposed Water Servicing

The Mayfield West community will be serviced by a network of new watermains designed in accordance with Town of Caledon design criteria and M.O.E. guidelines.

The conceptual watermain requirements were defined through the Background Studies.

The primary water distribution network will be comprised primarily of 300 mm mains, with the exception of the following 400 mm watermains:

- East / west industrial collector from the north / south industrial collector to Dixie Road.
- North / south industrial collector
- Dixie Road from Mayfield Road to East / west industrial collector
- East/ west residential collector from Main Street (Hwy 10) to Kennedy Road

The water distribution requirements were verified through watermain modeling for Mayfield West based on the proposed Secondary Plan. The watermain analysis conducted by MacViro Consultants in included in ***Appendix C***.

The conceptual watermain plan is illustrated in ***Figure 4***.

Final watermain sizing will be completed at the detailed design stage based on the actual development characteristics. Furthermore, the water distribution should be looped in order to provide system security.

4.4 Mayfield West Elevated Tank and Associated Watermains

It is noted that the proposed Secondary Plan requires the realignment of Kennedy Road from it current location to a new corridor located to the east. Based on the Region's construction schedule of the Kennedy Road watermains for fall of 2007, the watermains may be placed in their final location along the Mayfield West community's realignment of Kennedy Road.

In the event that the Region's elevated tank and watermain proceed in advance of the community approvals and construction, portions of the new Kennedy Road watermains will have to be relocated to conform with the new road alignment. Satisfactory construction and financial arrangement would be made between the owners' and Region of Peel for the relocation of the watermains. Furthermore, there would be limited development in the area prior to triggering the need to relocate the Kennedy Road watermains. As such, opportunities to reduce the size of the watermains during

the initial construction should be explored such that the throw-away costs are minimized. Further analysis and discussions with the Region are required to implement an interim design solution.

5.0 STORM DRAINAGE

5.1 Background Information

The following studies were used to define the preliminary drainage and stormwater management requirements:

- **"DRAFT" Etobicoke Creek Headwaters Subwatershed Background Report, Surface Water Quality,** December 2004, Toronto and Region Conservation Authority
- **A Report Card on the Health of the Humber River Watershed**, July 2000, Toronto and Region Conservation Authority
- **2003 Humber Watershed Progress Report**, Toronto and Region Conservation Authority
- **Greening our Watersheds: Revitalization Strategies for Etobicoke and Mimico Creeks**, May 2002, Toronto and Region Conservation Authority
- **Etobicoke Creek Flood Control Study, Watershed Management Strategy, Final Report**, May 1995, Revised September 1996, Fred Schaeffer & Associates Ltd. (***Etobicoke Creek Study***)
- **West Humber River Subwatershed Study,** February 1996, Aquafor Beech Limited (***West Humber Study***)
- **Stormwater Management Planning and Design Manual,** March 2003, Ministry of Environment ***(SWMP Design Manual)***
- **Town of Caledon Development Standards, Policies and Guidelines, Ver. 3,** January 2005

The above documents form the basis of this report.

5.2 Existing Features and Drainage Patterns

The Mayfield West community is largely defined by the major drainage features which frame the community. To the south west, the main branch of Etobicoke Creek forms a well defined development limit. An unnamed tributary of Etobicoke Creek creates the north-west limit of the community. The H3 tributary of the West Humber River creates

TO PROP. MAYFIELD WEST ELEVATED TANK (ADJACENT TO KING STREET).

HYDRANT FLOW TESTING

NOTE:Hydrants tested according to NFPA 291: Recommended Practice for Fire Flow Testing and Marking of Hydrants

GENERAL INFORMATION

General Information

Date of Testing	18-Nov-21
Project Number:	135636
Site Location / Address:	12304 Heart Lake
Region / Municipality	Peel Region
Hydrants Opened By:	Peel Region
Tested by:	Daniel S Val V

HYDRANT TEST INFORMATION

Hydrant Test Location - Residual Hydrant=R, Flow Hydrant=F (North at Top)

Test Data

Time of Test	8:14 AM
Pipe Size (mm)	300
Flow Hydrant Test Location (description)	101 Abbotside Way and Learmont Ave
Residual Hydrant Test Location (description)	First hydrant east of 101 Abbotside Way and Learmont Ave
Static Pressure(PSIG)	81

Q1 Test Data (1 Orifice)

# OUTLETS	ORIFICE SIZE(IN)	PITOT PRESSURE(PSIG)	FLOW(USGPM)	RESIDUAL PRESSURE(PSIG)
1	2.5	45	1126	74

QT Test Data (2 Orifices)

# OUTLETS	ORIFICE SIZE(IN)	PITOT PRESSURE(PSIG)	FLOW(USGPM)	RESIDUAL PRESSURE(PSIG)
2	2.5	30	1838	73

Calculations

FORMULA: Q= 29.83 cd^2√p.....Where: c- coefficient of discharge (1 in smooth pipe)
..... d- pipe diameter (inches)
.....p- pitot reading (psig)

Q1 - 1 Orifice(s)	Q1= (29.83)(0.9)(2.5)^2 √45=1126
QT - 2 Orifice(s)	QT= 2(29.83)(0.9)(2.5)^2 √30=1838
Static Pressure(PSIG)	81

FIRE FLOW DEMAND CALCULATIONS

Project Name: 12304 Heart Lake Road - PH2
Project Number: 135636
Date: 18-Mar-22
Designed By: Nicolas Di Stefano, P.Eng.

Based on the Water Supply for Public Fire Protecetion Manual, 1999 by the Fire Underwriters Survey

Step 1: Calculate Fire Flow (based on area)

$$F = 220C\sqrt{A}$$

Construction Coefficient =	0.6	
Largest Floor Area =	29,830	m2
Floor Above =	0	m2
Floor Below =	0	m2
Area =	29,830	m2
Fire Flow (F) =	**23,000**	L/min

F = required fire flow (L/min)
C = coefficient related to type of construction
- 0.6 for fire resistive (fully protected, 3-hr ratings)
- 0.8 for non combustable (i.e. unprotected metal buildings)
- 1.0 for ordinary construction
- 1.5 for wood frame construction

A = total floor area excluding basements 50% below grade

** If vertical openings are inadequately protected, consider two largest two largest adjoining floors plus 50% of each of any floors above up to eight floors.*
** If vertical openings are adequately protected (one hour rating), consider largest floor area + 25% of two immediately floors.*

Step 2: Adjustment for Building Occupancy (shall not be less than 2000 L/s)

Occupancy Adjustment =	-0.15				
F_1 = Fire Flow x Adjustment =	**19,550**	L/min	Non-Combust.	-25%	Free Burning	15%
			Limited Comb.	-15%	Rapid Burning	25%
			Combustable	No change		

Step 3: Adjust F1 for Fire Supression System

Sprinkler Adjustment =	30%		
F_2 = F_1 x Adjustment =	**5,865**	L/min	Automatic Sprinklers (monitored) -50%
			Adequatly Designed System -30%

Step 4: Adjust F1 for Exposure / Proximity (shall not exceed 75%)

Proximity Adjustment =	15%	(max 75%)
F_3 = F_1 x Factor =	**2,933**	L/min

Separation	Adjustment	Separation	Adjustment
0m to 3m	25%	20.1m to 30m	10%
3.1m to 10m	20%	30.1m to 45m	5%
10.1m to 20m	15%		

Step 5: Calculate Adjusted Fire Flow (shall not be less than 2000 L/min or greater than 45,000 L/min)

$$\text{Fire Flow} = F_1 - F_2 + F_3$$

F_1 =	19,550	L/min
- F_2 =	5,865	L/min
+ F3 =	2,933	L/min
Fire Flow =	17,000	L/min
Fire Flow =	**283.3**	L/s
Total Demand (Fire Flow + MDD) =	**285.6**	L/s

Checks:
Fire Flow greater than 2000 L/min
Fire Flow less than 45,000 L/min

12304 Heart Lake Road - PH2

Industrial Development
