Appendix J:	Signal Warrant
Appendix K:	Left Turn Warrant

1.0 INTRODUCTION

This Transportation Study has been prepared on behalf of the landowner, bclMC Realty Corporation c/o QuadReal Property Group ("QuadReal"), in support of a Site Plan Approval ("SPA") application for the lands municipally described as 12861 Dixie Road, in the Town of Caledon (the "Site").

QuadReal intends to redevelop the Subject Property into a leading Class 'A' last-mile urban distribution and logistics facility (the "Proposed Development"). This report is provided in support of an Official Plan Amendment, Zoning By-Law Amendment, and Site Plan Application to permit the development of a three-building warehouse with associated ancillary office uses.

The Proposed Development consists of two industrial buildings with a total gross floor area of 188,718 square metres.

The Subject Property is located on the east side of Dixie Road, immediately south of Old School Road is used mainly as agricultural land. The Subject Property is bounded by adjacent parcels to the east and south, Old School Road to the North, and Dixie Road to the west. A variety of retail, commercial, restaurant and automotive uses are located along the south side of Mayfield Road and a residential subdivision comprised primarily of one- and two-storey single detached dwellings are located east of Dixie Road. Additionally, surrounding the Mayfield Road and Bramalea Road area to the east of the Site are retail and institutional buildings. The Subject Property is approximately 582,686 square metres (144 acres) in size with approximately 900 metres of frontage along Dixie Road and approximately 520 metres of frontage along Old School Road.

1.1 THE SITE

As outlined in **Section 1.0**, the Site is located on the east side of Dixie Road, immediately south of Old School Road. The Site is bounded by adjacent development parcels to east and south, Old School Road to the north, and Dixie Road to the west.

The Site location is shown in **Figure 1**.

1.2 THE PROPOSED DEVELOPMENT

The Proposed Development contemplates the construction of two new industrial buildings. The Proposed Development is being built speculatively and is intended to serve a variety of warehousing uses, including general warehousing, fulfilment centre warehousing, and other light industrial/commercial uses. The Proposed Development consists of two industrial buildings approximately sized at 100,758 square metres and 87,860 square metres with a combined floor area of approximately 188,718 square metres. Each building includes vehicle parking, truck loading docks, and in some cases, tractor-trailer parking spaces. A total of 1,972 car parking spaces are proposed across the Site, located at grade.

The expected occupancy of the buildings is 2028.

The western side of the property along Dixie Road proposes a right-in / right-out access, approximately 240 metres south of the Dixie Road / Old School Road intersection, exclusively for light vehicles.

The northern side of the property along Old School Road plans for two vehicular access points, also presented in **Figure 2**, and a functional design plan is attached in **Appendix C**:

- Site Access 1: Approximately 90 metres east of the Dixie Road / Old School Road intersection, the access is proposed to operate under right-in / right-out operations for all vehicles.
- Site Access 2: Approximately 460 metres east of the North West Access, proposed to operate full moves signalized operations.

The Site plan is shown in **Figure 2** and a reduced copy of the architectural plans (not to scale) are attached in **Appendix A**.

FIGURE 1 SITE LOCATION

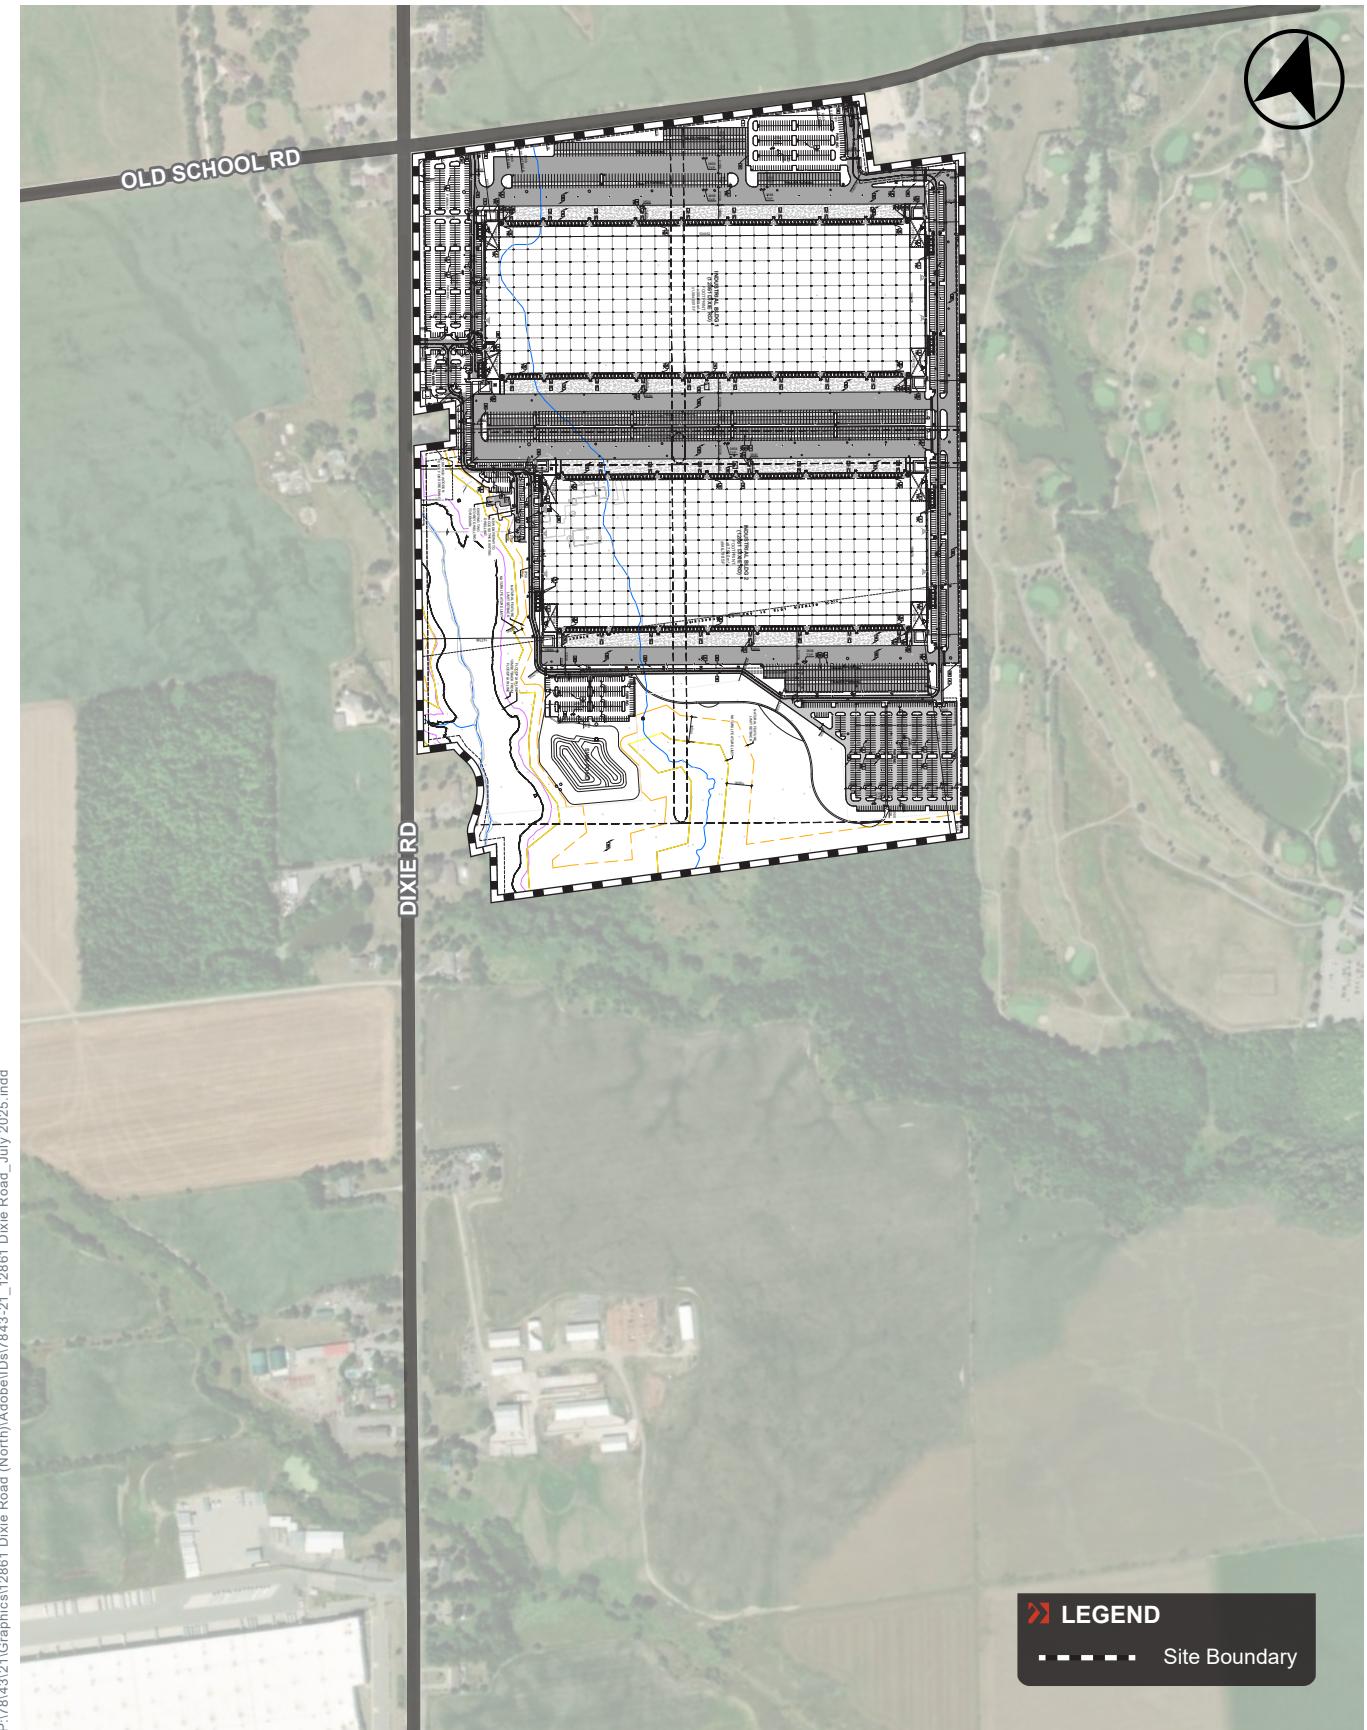

FIGURE 2 SITE PLAN

2.0 TRANSPORTATION CONTEXT

2.1 EXISTING ROAD NETWORK

A brief description of the roads in the vicinity of the Site follows. Existing lane configurations and road network classifications in the vicinity of the Site are shown in **Figure 3** and **Figure 4** respectively.

2.1.1 Dixie Road

Dixie Road is an arterial road in the vicinity of the Site, operated by the Region of Peel. Dixie Road is generally aligned in a north-south direction with a two-lane cross-section (one lane per direction) and extends from Olde Base Line Road to Lakeshore Road East within Mississauga. The portion of Dixie Road north of Mayfield Road adjacent to the Site is classified as a Suburban Connector as per the 2013 Peel Region Road Characterization Study.

A posted speed limit of 80 kilometres per hour is in effect along Dixie Road in the vicinity of the Site.

The Dixie Road / Mayfield Road intersection is signalized. Localized widening allows for the provision of dedicated left turn lanes and right turn slip lanes on each approach.

2.1.2 Old School Road

Old School Road is a local collector road in the vicinity of the Site, operated by the Town of Caledon. Old School Road is generally aligned in an east-west direction with a two-lane cross-section (one lane per direction) and extends from Winston Churchill Boulevard within Mississauga to Airport within Caledon.

A posted speed limit of 60 kilometres per hour is in effect along Old School Road in the vicinity of the Site.

The Dixie Road / Old School Road intersection is signalized. Future widening is proposed to allow for the provision of dedicated left turn lanes and right turn slip lanes on each approach.

2.1.3 Mayfield Road

Mayfield Road is an arterial road in the vicinity of the Site, operated by the Region of Peel. Mayfield Road is generally aligned in an east-west direction with a six-lane cross-section (three lanes per direction) west of Dixie Road until approximately 275 metres west of Heart Lake Road, and a five-lane cross-section (three lanes eastbound, 2 lanes westbound) between Dixie Road and Bramalea Road. It extends from Winston Churchill Boulevard to Highway 50. The portion of Mayfield East of Dixie Road adjacent to the Site is classified as an Industrial Connector as per the 2013 Peel Region Road Characterization Study.

A sidewalk is provided along the south side of Mayfield Road.

A posted speed limit of 80 kilometres per hour is in effect along Mayfield Road in the vicinity of the Site. The Mayfield Road / Bramalea Road intersection is signalized. Localized widening allows for the provision of dedicated left turn lanes and right turn slip lanes on each approach.

2.1.4 Bramalea Road

Bramalea Road is a collector road operated by the Town of Caledon. Bramalea Road is generally aligned in a north-south direction and operates with a four-lane cross-section (two lanes per direction) within the study area. Bramalea Road extends from Olde Base Line Road to Derry Road East within Mississauga.

A posted speed limit of 60 kilometres per hour is in effect along Bramalea Road in the vicinity of the Site.

2.1.5 Abbotside Way

Abbotside Way is a local road operated by the Town of Caledon. The roadway operates with a two-lane cross-section (one lane per direction) and operates with an unposted speed limit of 50 kilometres per hour.

2.2 EXISTING TRANSIT NETWORK

Two bus services operate within 2 kilometres of the Site, as outlined in the following sections.

The existing transit network in the vicinity of the Site is shown in **Figure 5**.

2.2.1 15 Bramalea

The 15 Bramalea bus route operates between the Smart Centres - Walmart Plaza near the Mayfield Road / Bramalea Road intersection and Telford Way at Tranmere Drive, generally in a north-south direction. The route operates at intervals of 10 minutes during the AM and PM peak hours. The nearest stop is located south of the Mayfield Road / Bramalea Road intersection, approximately 1 kilometre to the east of the Site.

2.2.2 18 Dixie

The 18 Dixie bus route operates between Meyerside Drive and Inspire Boulevard along Dixie Road, generally in a north-south direction at intervals of 10 minutes during the AM and PM peak hours. The nearest stop is located at the Inspire Boulevard / Dixie Road intersection, approximately 750 metres to the south of the Site.

2.3 EXISTING BICYCLE NETWORK

Existing bicycle infrastructure near the Site includes a multi-use path located along the south side of Mayfield Road, which subsequently provides connections to the wider bicycle network within the City of Brampton. The Active transportation network context in the vicinity of the Site is shown in **Figure 6**.

2.4 EXISTING PEDESTRIAN NETWORK

Due to the agricultural uses of surrounding lands, there is an absence of sidewalks in the area immediately surrounding the Site. A sidewalk is provided along the south side of Mayfield Road to facilitate residential uses. Despite the minimal pedestrian infrastructure, crosswalks are available at the signalized intersections of Dixie Road / Mayfield Road, Dixie Road / Old School Road, and Bramalea Road / Mayfield Road. The active

transportation network context in the vicinity of the Site is shown in **Figure 6**. Additionally, a pedestrian site circulation plan has been provided within **Appendix D**.

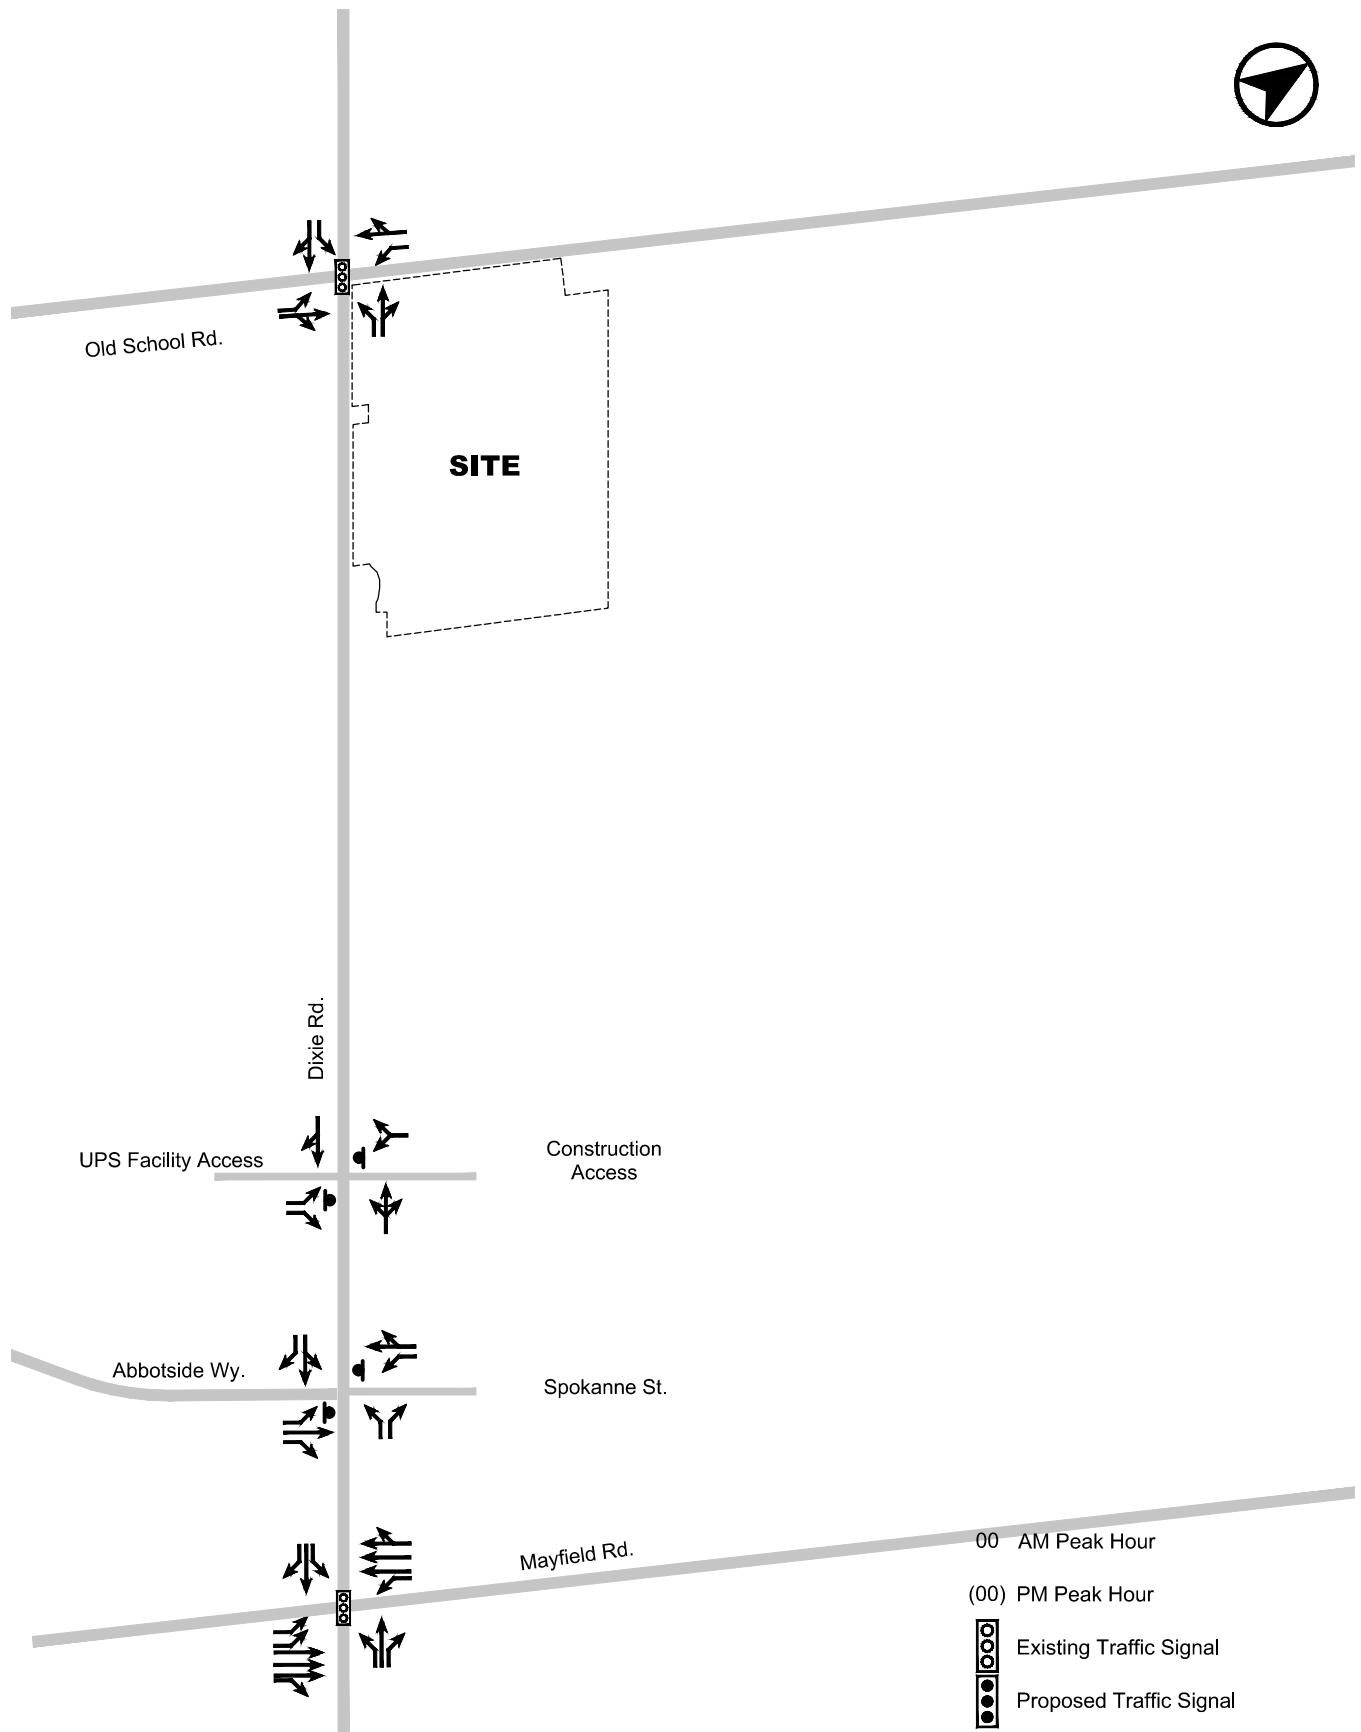

FIGURE 3 EXISING LANE CONFIGURATION AND TRAFFIC CONTROL

FIGURE 4 EXISTING STREET NETWORK

FIGURE 5 EXISTING AND FUTURE TRANSIT NETWORK

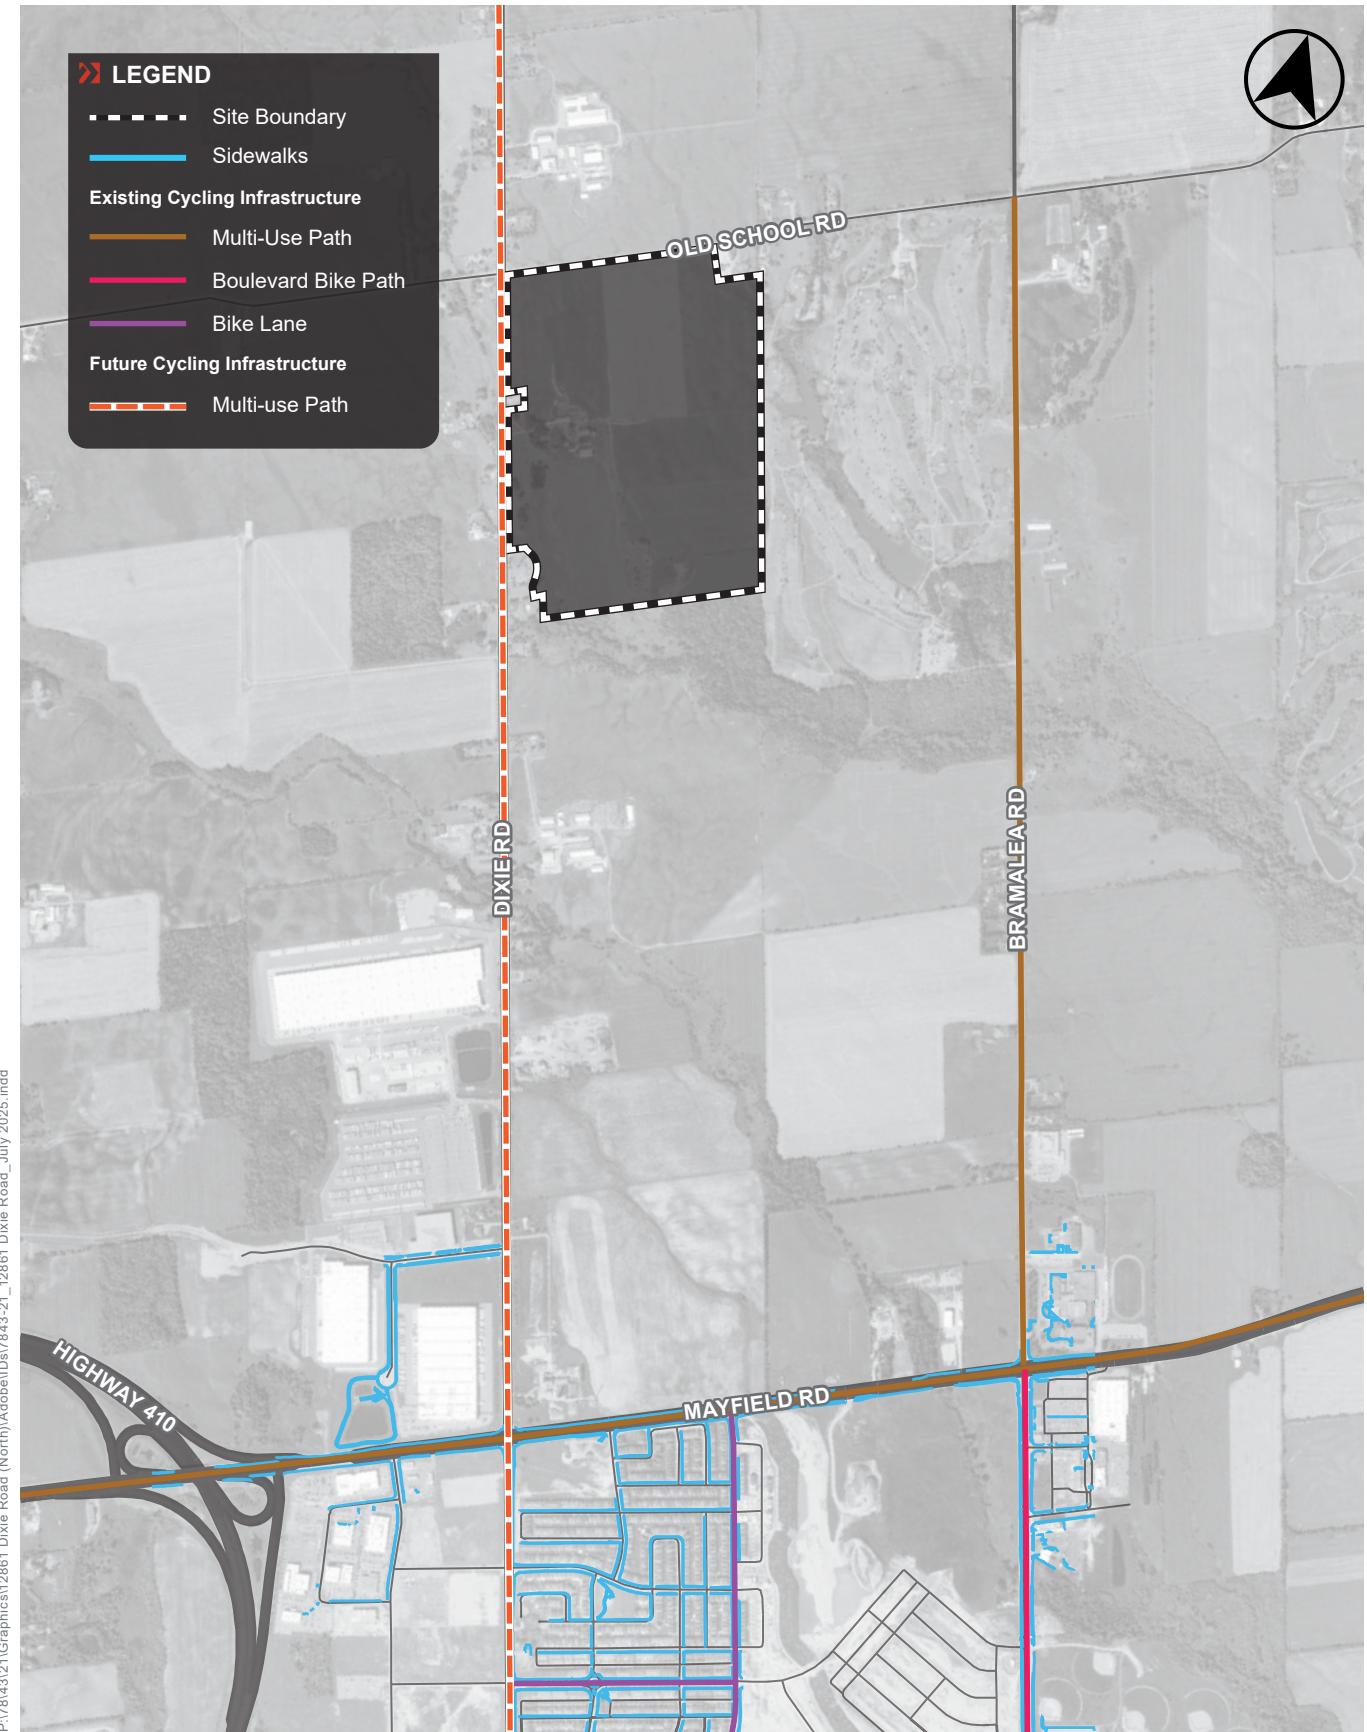

FIGURE 6 ACTIVE TRANSPORTATION CONTEXT

2.5 FUTURE INFRASTRUCTURE PROJECTS

2.5.1 Dixie Road Widening

The Region of Peel Environmental Study Report prepared by AECOM, dated August 2011 (herein referred to as the “ESR”) evaluates the need and feasibility of a widening and improvements on Dixie Road from Queen Street to two kilometres north of Mayfield Road, to help address the short- and long-term needs related to future planned growth, operational and service deficiencies, road and intersection geometrics, road link capacity, and storm drainage deficiencies.

The ESR includes a list of improvements that will begin construction ranging from Spring 2022 to 2027. The ESR recommends that Dixie Road is widened to 6 through lanes plus turning lanes from north of Queen Street to Countryside Drive and 4 through lanes plus turning lanes north of Countryside Drive to approximately two kilometres north of Mayfield Road. Construction for the Dixie Road widening was planned to start in the summer of 2023. Additionally, the ESR states that multi-use trails will be installed along Dixie Road, along with improvements in landscaping, streetscaping, traffic signals, and lighting.

Near the vicinity of the Site, north of Mayfield Road, Dixie Road is planned to be widened to four lanes, plus a centre turning lane, as part of an approved project by the Region of Peel in February 2011 (resolution 2011-38). The west side of Dixie Road will contain a multi-use path for pedestrians and cyclists. The intersection of Dixie Road and Mayfield Road will be configured to include channelized rights on all four legs, in addition to dual-left auxiliary lanes at the south, east, and west legs.

2.5.2 Mayfield Road Widening

The Region of Peel Long Range Transportation Plan (2019) was reviewed to identify any planned roadway improvements within the study area. It was identified that Mayfield Road is to be widened to 6 through lanes from Dixie Road to Bramalea Road plus turning lanes, to help address the short- and long-term needs related to future planned growth, operational and service deficiencies, and road link capacity. Construction for the Mayfield Road widening is planned to start in 2025.

The Region of Peel has additionally completed a Schedule “C” Environmental Assessment for the improvements to Mayfield Road from Heart Lake Road to Airport Road. The Environmental Study Report was published in May 2004. The need for improvements and additional roadway capacity in the Mayfield Road corridor had been previously identified in earlier studies, including the *“Mayfield Road Environmental Assessment and Preliminary Design Study (Hurontario to Heart Lake Road)”* and the Region of Peel Official Plan. The ESR identifies lands to be protected for an ultimate 6-lane cross-section between Hurontario Street and Heart Lake Road.

Within the Vicinity of the Site, Mayfield Road is planned to be widened to 3 through lanes plus turning lanes in both directions. The intersection of Dixie Road and Mayfield Road will be configured to include channelized rights on all four legs, in addition to dual-left auxiliary lanes at the south, east, and west legs.

3.0 CAR PARKING CONSIDERATIONS

3.1 CAR PARKING STANDARDS

3.1.1 Town of Caledon Zoning By-law 2006-50

The Site is subject to the car parking requirements of the Town of Caledon Zoning By-Law 2006-50. The parking requirements for the development are summarized in **Table 1**.

TABLE 1 TOWN OF CALEDON ZONING BY-LAW 2006-50

Use	GFA	Rate	Number of Parking Spaces
Warehouse (Building 1)	100,758 m ²	Over 20,000 m ² – 168 parking spaces, plus 1 parking space per 170 m ² of net floor area or portion thereof over 20,000 m ²	673
Warehouse (Building 2)	87,960 m ²		598
Total	188,718 m²		1,271

Notes:

1. Building 1 office area: 2,406 m²
2. Building 2 office area: 2,468 m²

Based on the foregoing, under the Town of Caledon Zoning By-Law 2006-50, the development has a requirement to provide a total of 1,271 car spaces.

3.2 PROPOSED CAR PARKING PROVISION

A total of 1,972 car spaces are proposed, which exceeds the requirements and is therefore considered to be satisfactory.

3.3 ACCESSIBLE CAR PARKING

3.3.1 Accessible Car Parking Standards

3.3.1.1 Town of Caledon By-law 2015-058

Town of Caledon By-Law 2015-058, Schedule "K" outlines accessible car parking standards based on the total car parking supply, with the following standards relevant to the Proposed Development:

(8) Under section 80.36 of the Integrated Accessibility Standards Regulation, the minimum number of designated accessible parking spaces shall be provided in accordance with the following: Eleven parking spaces for the use of persons with disabilities and an additional one percent of parking spaces for the use of persons with disabilities, where there are more than 1,000 parking spaces.

(9) Where an even number of accessible parking spaces are required, an equal number of Type A and B accessible parking spaces shall be provided. Where an odd number of accessible parking spaces are required, an equal number of Type A and B accessible parking spaces shall be provided but the last accessible parking space may be Type B.

Application of the above rates to the proposed supply of 1,972 car spaces equates to a requirement to provide 29 accessible spaces, of which 14 should be Type A accessible spaces and 15 should be Type B accessible spaces.

3.3.2 Proposed Accessible Car Parking Provision

A total of 44 accessible spaces are proposed (including 22 Type A spaces and 22 Type B spaces), which meets the requirements of the Town of Caledon By-Law 2015-058 as outlined above.

4.0 BICYCLE PARKING CONSIDERATIONS

The Town of Caledon Zoning By-Law 2006-50 does not list any bicycle parking requirements for industrial or warehouse uses. Notwithstanding, 48 bicycle spaces have been provided adjacent to the locations of the office buildings within the site.

5.0 LOADING CONSIDERATIONS

5.1 LOADING STANDARDS

5.1.1 Town of Caledon Zoning By-Law 2006-50

The Town of Caledon Zoning By-Law 2006-50 loading requirements are applied to the Proposed Development in **Table 2**.

TABLE 2 TOWN OF CALEDON ZONING BY-LAW 2006-50

Use	GFA	Rate	Number of Loading Spaces
Warehouse (Building 1)	100,758 m ²	7,441 m ² or greater:	13
Warehouse (Building 2)	87,960 m ²	3 loading spaces plus 1 additional loading space for each 9,300 m ² GFA or part thereof in excess of 7,441 m ²	12
Total			25

Application of the Town of Caledon Zoning By-Law 2006-50 loading standards to the Proposed Development results in a minimum requirement of 25 loading spaces.

Loading spaces are required to be a minimum of 3.5 metres wide by 14 metres long, with a vertical clearance of 3.35 metres.

5.2 PROPOSED LOADING PROVISION

A total of 394 potential loading docks and two drive-in doors (at one end of each building) are proposed. The proposed potential loading supply exceeds the requirements of the Town of Caledon Zoning By-Law 2006-50. Given the proposed warehouse land use, the potential loading supply will be determined in part by the needs of future tenants. The proposed loading docks also exceed the dimensional requirements of the Town of Caledon Zoning By-Law 2006-50.

As noted previously, the potential loading spaces indicated on the Site Plan represent opportunities to provide direct access loading bays. The total number of loading docks and their specific locations will be determined in conjunction with the needs of the tenants, which will vary. The Site Plan illustrates the maximum potential number of spaces available to tenants, with the specific supply likely to vary over time, while consistently complying with the by-law minimum requirement.

Vehicle maneuvering diagrams have been provided within **Appendix E**.

6.0 SITE PLAN CONSIDERATIONS

6.1 SITE ACCESS

As mentioned in **Section 1.2**, vehicular access is proposed via three access points along Dixie Road and Old School Road.

The southwest side of the property along Dixie Road proposes a right-in / right-out access exclusive for light vehicle use. The northwest side of the property along Old School Road proposes a right-in / right-out for all vehicles. A signalized intersection for all vehicles is proposed by the northeast side of the property along Old School Road.

TABLE 3 SITE ACCESS SUMMARY

Site Access	Road Intersection	Configuration	Signalization
Site Access 1 (South West)	Dixie Road / Site Access 1	Right-in / Right-out	No
Site Access 2 (North West)	Old School Road / Site Access 2	Right-In / Right-Out	No
Site Access 3 (North East)	Old School Road / Site Access 3	Full-Moves	Yes

The proposed Site access points and spacing between each conform with the requirements laid out in the 2013 Peel Region Road Characterization Study (RCS) for a Suburban Connector (Dixie Road). As there are no consecutive full-move accesses along Dixie Road (the intersections alternate between full-moves and right-in / right-out), the required intersection spacing between each access is 75 metres as per the RCS. Therefore, the intersection spacing meets the requirements set out within the RCS.

6.2 SIGHT LINE ANALYSIS

Vehicular sight lines for the proposed site accesses were reviewed. The critical movements were reviewed for a design speed of 70km/hr for Old School Road and 80km/hr for Dixie Road. Sight line requirements for the site accesses are satisfied. The relevant figures are attached in **Appendix B**.

6.3 TRUCK ACCESS

Heavy vehicles are expected to enter and exit the Site via the two proposed access points along Old School Road:

- Old School Road / Site Access 2
- Old School Road / Site Access 3

The locations of the light vehicle parking spaces have been strategically laid out throughout the Site area, as can be observed in **Figure 2**, to minimise the potential for conflict between light and heavy vehicles. Light vehicles should be capable of accessing the parking lots for their respective buildings without the need to cross through the loading areas. Similarly, heavy vehicles may access the loading areas for their respective buildings without traversing through the designated light vehicle parking areas.

7.0 TRAFFIC VOLUME FORECASTING

The following section outlines the traffic volume forecasting scope of work as discussed and agreed upon with the Town of Caledon and the Region of Peel.

7.1 EXISTING TRAFFIC VOLUMES

Traffic analysis has been completed for the following scenarios during the AM and PM peak hour periods:

- Existing Traffic Conditions;
- Future Background Conditions at occupancy (2028);
- Future Total Conditions at occupancy (2028);
- Future Background Conditions at 5 years post occupancy (2033); and
- Future Total Conditions at 5 years post occupancy (2033).

7.2 EXISTING TRAFFIC CONDITIONS

Existing traffic volumes for vehicles, cyclists and pedestrians were established for the weekday morning and afternoon peak hour periods on the area street network based on intersection traffic information collected by the Town of Caledon and Spectrum Traffic Data Inc. on behalf of BA Group. The turning movement count dates and sources are summarized in **Table 4**.

The raw turning movement counts are attached in **Appendix F**.

TABLE 4 EXISTING TRAFFIC COUNT INFORMATION

Intersection	Date of Count	Source
Dixie Road / Mayfield Road	November 14, 2023	Spectrum Traffic Inc. 6:30 a.m. to 9:30 a.m. 4:00 p.m. to 7:00 p.m.
Dixie Road / Abbotside Way / Spokane St		
Dixie Road / UPS Facility / Existing Construction Access		
Dixie Road / Old School Road		
Bramalea Road / Old School Road		

The existing turning movement counts were reviewed in detail to ensure general consistency in the traffic volumes on roadways between intersections. Where necessary, minor adjustments were made to balance traffic volumes between intersections to create a representative traffic volume base for the traffic operations analyses undertaken as part of this study. Existing traffic volumes are shown in **Figure 7**.

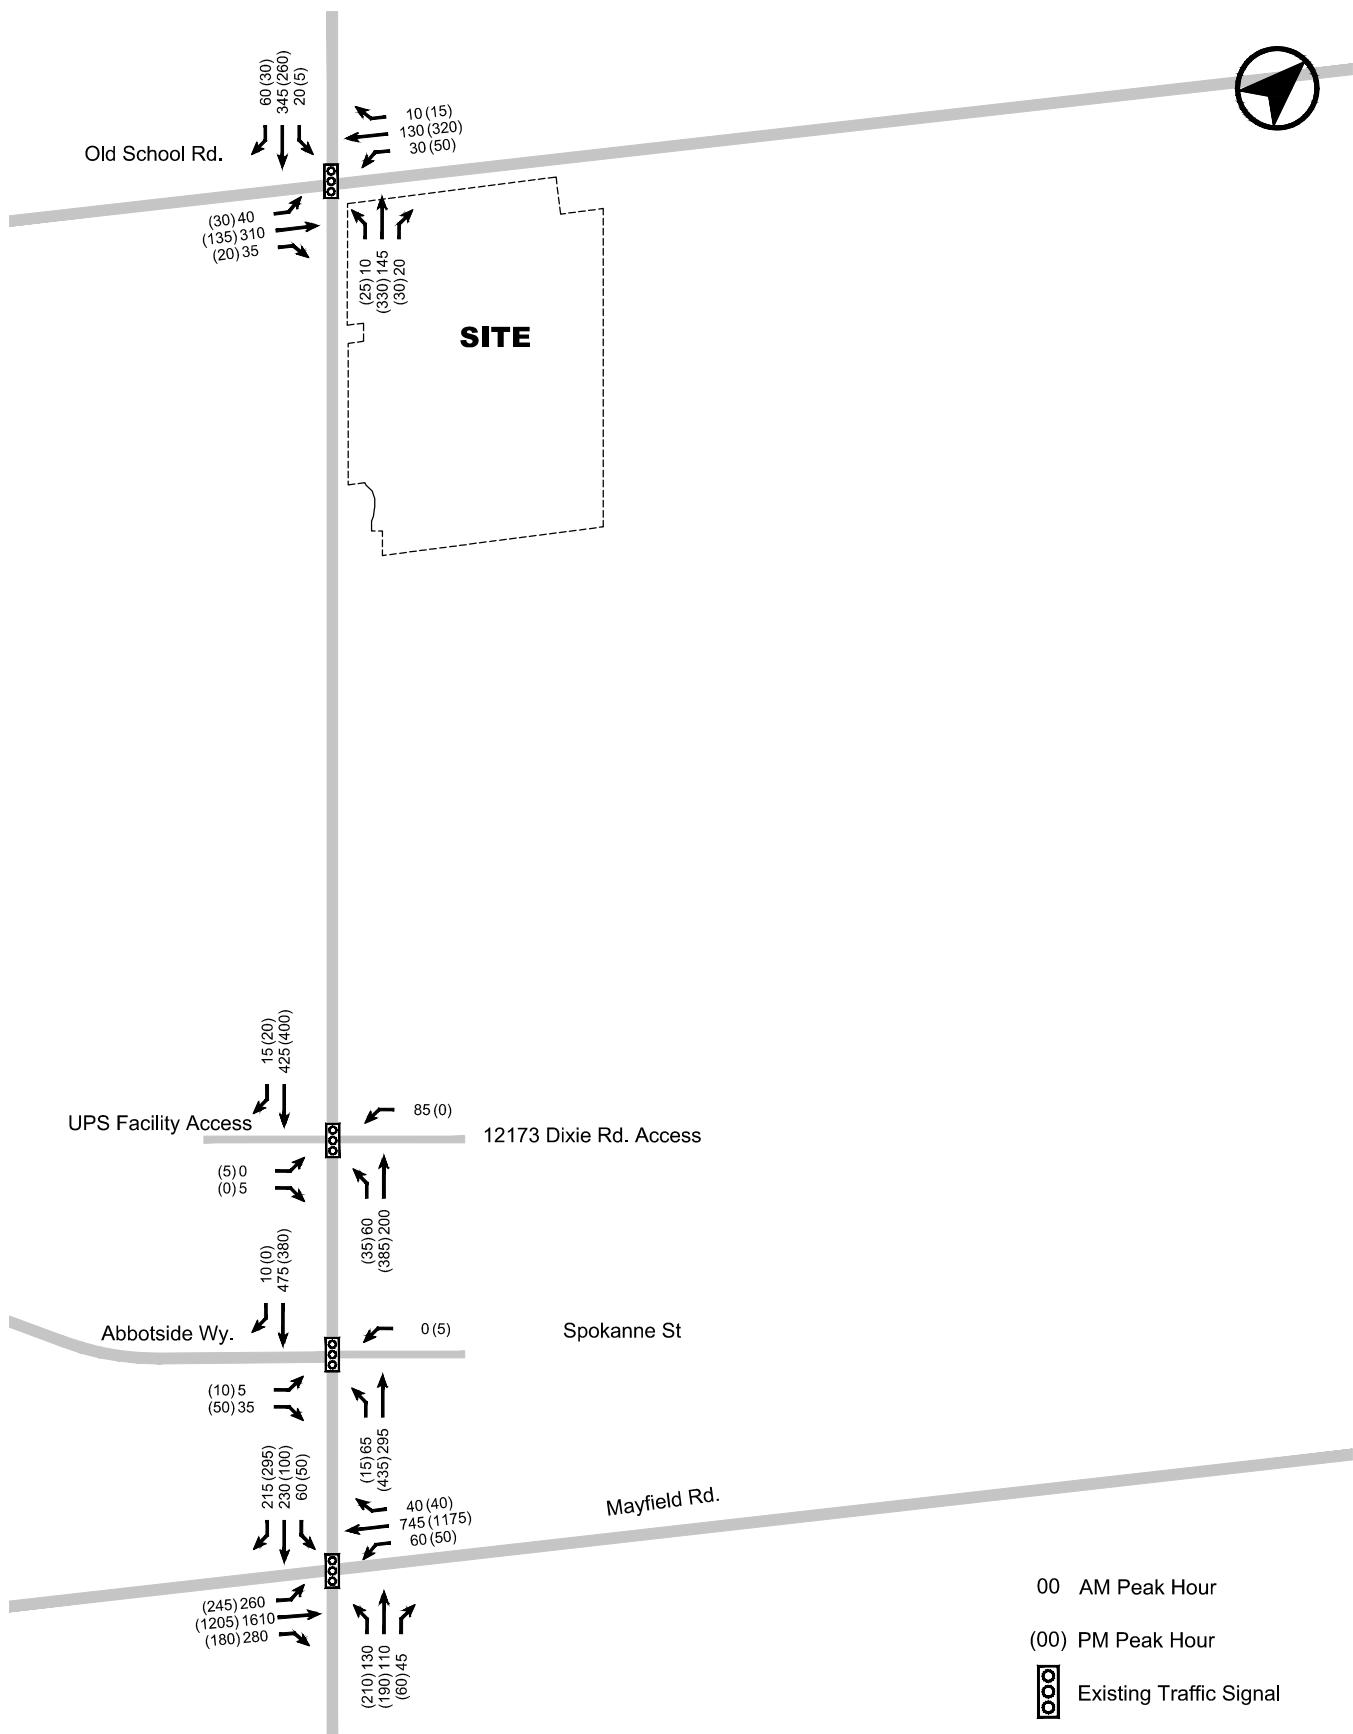

FIGURE 7 EXISTING TOTAL TRAFFIC VOLUMES

7.3 FUTURE BACKGROUND TRAFFIC VOLUMES

7.3.1 Background Development Growth

Future development traffic allowances in the 2028 and 2033 horizon years were made for proposed developments in the vicinity of the Site, as summarized in **Table 5**. Overall, proposed background developments include approximately 584,235 square meters of mixed-use development. As the phasing plans of the background developments are currently unknown, all developments are conservatively assumed to have the build-out year of 2028, along with the Site.

The location of the future background developments are illustrated in **Figure 8**.

TABLE 5 AREA BACKGROUND DEVELOPMENT

	Development Description	Traffic Study
12892 Dixie Road (Tribal Lands)	173,797 m ² industrial use	LEA, 2025
12490 Dixie Road (Tribal Lands)	136,576 m ² industrial use	BA Group, 2025
12173 Dixie Road (Tribal Lands)	190,824 m ² industrial use	BA Group, 2023
12434 Dixie Road	Truck Trailer Parking Facility	Nextrans, 2021
Parts of Lots 18,19,20 (NW Quadrant of Mayfield Road and Dixie Road)	--	No Study Available
Total	584,235 m² industrial use	

FIGURE 8 AREA BACKGROUND DEVELOPMENTS

7.3.2 Corridor Growth

To conservatively capture development progress outside of the study area for the horizon years of 2028 (occupancy), and 2033 (5 years post occupancy) the following growth rates were applied during both weekday morning and afternoon peak hours:

- Mayfield Road (2023 to 2033): 2.0% annual growth rate (Region's Traffic Model)
- Old School Road (2023 to 2033): 2.0% annual growth rate (Region's Traffic Model)

In addition to the region's model, the volumes generated by the background developments listed in **Table 5** were assumed to represent growth volumes along Dixie Road, as agreed upon within discussions with the Region of Peel. The background developments outlined within **Table 5** and their subsequent volumes encompass all the property along Dixie Road, north of Mayfield Road, that is currently planned to be redeveloped. The changes to the area's land use planning do not extend north of Old School road, and therefore there is no anticipated development further up the corridor that is expected to disproportionately increase traffic growth which is not otherwise represented within the listed background developments.

7.3.3 Background Traffic Volumes

Background traffic volumes, inclusive of volumes projected and assumed to be generated by background development traffic allowances and corridor growth.

7.3.4 Removal of Existing Traffic

Traffic generated by the existing construction site at 12173 Dixie Road has been removed in all future scenarios as it is expected to be replaced by the traffic generated by the future development at 12173 Dixie Road. The total volumes removed are summarized in **Table 6**.

No traffic has been removed from the 12861 Dixie Road (the Site) development as the land sits currently empty.

TABLE 6 SUMMARY OF REMOVAL OF EXISTING TRAFFIC

	AM Peak Hour			PM Peak Hour		
	In	Out	2-Way	In	Out	2-Way
Construction Site (12173 Dixie Road)	0	85	85	0	0	0
Total Traffic (To be Removed)	0	85	85	0	0	0

Notes:

1. Based on existing traffic surveys conducted on November 14th, 2023. All trucks turn south on Dixie Road from site access.

7.3.5 Future Background Traffic Volumes

Future background traffic volumes are determined by adding existing traffic volumes and background traffic volumes, for the horizon years of 2028 and 2033, and are shown in **Figure 9** and **Figure 10** respectively.

7.4 SITE TRAFFIC VOLUMES

7.4.1 Vehicle Trip Generation Data

As discussed in **Section 1.2**, the Proposed Development is speculative and could potentially serve a variety of warehousing uses, including general warehousing, fulfillment centre warehousing, and other light industrial/commercial uses. Vehicular trip generation associated with such uses can vary depending on several factors, such as staff density, operating hours, shift composition and timing, and the frequency of visitors to the Site.

To this end, trip generation rates for a variety of warehousing uses have been collected based on rates outlined in the ITE 11th Edition + Supplement and proxy data collected by BA Group and are summarized in **Table 7**.

TABLE 7 INDUSTRIAL FACILITY TRIP GENERATION

Location / Use	Time Period / Parameter	AM Peak Hour			PM Peak Hour			
		In	Out	2-Way	In	Out	2-Way	
Comparison Facilities– Trip Rates (Trips / 100 m² GFA)

Notes:

1. Conservatively based on the smallest building's GFA.

7.4.2 Site Light Vehicle Trip Generation

Based on the above-selected rate, the traffic volumes projected to be generated by the proposed development in the AM and PM peak hours are summarized in **Table 8**.

TABLE 8 LIGHT VEHICLE TRIP GENERATION SUMMARY

	Size	AM Peak Hour			PM Peak Hour		
		In	Out	2-Way	In	Out	2-Way
Adopted Vehicle Trip Rate (<i>vehicle trips per 100 m²</i>)		0.12	0.05	0.17	0.04	0.11	0.15
Site Trips							
Building 1	100,758 m²	100	30	130	25	90	115
Building 2	87,890 m²	85	25	110	20	80	100
Total Vehicle Trips	188,648 m²	185	55	240	45	170	215

Notes:

1. Trips rounded to the nearest 5 vehicles.
2. Based on statistics provided by Quadreal Property Group dated November 22, 2023.

On the basis of the above, it is estimated that the Proposed Development will generate in the order of 240 and 215 two-way light vehicle trips during the AM and PM peak hour periods, respectively.

7.4.3 Site Heavy Vehicle Trip Generation

Similar to trip generation rates, heavy vehicle profiles can also vary considerably between the varieties of warehousing uses discussed above.

As such, Site heavy vehicle percentages were determined by adopting the same methodology outlined above for the trip generation rates, as outlined in **Table 7**.

The average heavy vehicle percentage analysis and the resultant heavy vehicle percentage are summarized in **Table 9**.

TABLE 9 HEAVY VEHICLE TRIP GENERATION SUMMARY

	Size	AM Peak Hour			PM Peak Hour		
		In	Out	2-Way	In	Out	2-Way
Adopted Vehicle Trip Rate (<i>vehicle trips per 100 m²</i>)		0.12	0.05	0.18	0.04	0.11	0.15
Adopted Heavy Vehicle Percentages		18%	43%	28%	42%	17%	26%
Site Trips							
Building 1	42,365 m ²	20	20	40	15	20	35
Building 2	44,670 m ²	20	20	40	15	15	30
Total Vehicle Trips	190,824 m²	40	40	80	30	35	65

Notes:

1. Trips rounded to the nearest 5 vehicles.
2. Based on statistics provided by Quadreal Property Group dated November 22, 2023.

On the basis of the above, it is estimated that the Proposed Development will generate in the order of 80 and 65 two-way heavy vehicle trips during the AM and PM peak hour periods, respectively.

7.4.4 Heavy and Light Vehicle Volumes

Based on the above heavy vehicle percentages, the heavy and light vehicle volumes projected to be generated by the Proposed Development along with the total net-new traffic volumes in the AM and PM peak hours are summarized in **Table 10**.

TABLE 10 HEAVY AND LIGHT VEHICLE VOLUMES

	AM Peak Hour			PM Peak Hour		
	In	Out	2-Way	In	Out	2-Way
Heavy Vehicle Percentage	20%	45%	28%	50%	18%	26%
Heavy Vehicle Volumes						
Building 1 North	20	20	40	15	20	35
Building 1 South	20	20	40	15	15	30
Total Heavy Vehicle Trips	40	40	80	30	35	65
Light Vehicle Volumes						
Building 1 North	100	30	130	25	90	115
Building 1 South	85	25	110	20	80	100
Total Light Vehicle Trips	185	55	240	45	170	215
Total Net-New Site Volumes	225	95	320	75	205	280

Notes:

1. Trips rounded to the nearest 5 vehicles.

It is estimated that the Proposed Development will generate in the order of 310 and 280 two-way vehicle trips during the AM and PM peak hour periods, respectively.

7.4.5 Vehicle Trip Distribution

Site traffic for light vehicles was assigned onto the area road network based on the results of the 2016 Transportation Tomorrow Survey (TTS) for work-based trips, while heavy vehicle distribution was based on prevailing traffic patterns and area turn restrictions. The resulting inbound and outbound distribution for the AM and PM peak for light and heavy vehicles is summarized in **Table 11** and **Table 12**, respectively.

TABLE 11 TTS SITE TRAFFIC DISTRIBUTION

Street	Direction	Light Vehicles ¹	
		Inbound	Outbound
Dixie Road	North	20%	25%
	South	20%	15%
Mayfield Road	East	15%	10%
	West	30%	35%
Old School Road	East	15%	15%
	West	0%	0%
Total		100%	100%

Notes:

1. Based on TTS (2016) analysis for work-based trips for TTS zone 3012, 3013, 3014, 3015, 3439, 3438, 3191.

TABLE 12 EXISTING SURVEY SITE TRAFFIC DISTRIBUTION

Street	Direction	Heavy Vehicles ¹	
		Inbound	Outbound
AM Distribution			
Dixie Road	North	15%	10%
	South	15%	15%
Mayfield Road	East	5%	5%
	West	60%	65%
Old School Road	East	5%	5%
	West	0%	0%
Total		100%	100%
PM Distribution			
Dixie Road	North	35%	15%
	South	5%	5%
Mayfield Road	East	10%	10%
	West	50%	60%
Old School Road	East	0%	10%
	West	0%	0%
Total		100%	100%

Notes:

1. Based on observed heavy vehicle distributions within the turning movement count along Dixie Road and Mayfield Road.

7.4.6 Site Traffic Volumes

The projected Site light vehicle traffic volumes, Site heavy vehicle traffic volumes, and Site total traffic volumes are shown in **Figure 11**, **Figure 12**, and **Figure 13**, respectively.

7.4.7 Future Total Traffic Volumes

Future total traffic volumes are determined by adding the Site total traffic volumes and future background volumes, and are shown in **Figure 14** and **Figure 15** for the 2028 and 2033 horizons, respectively.

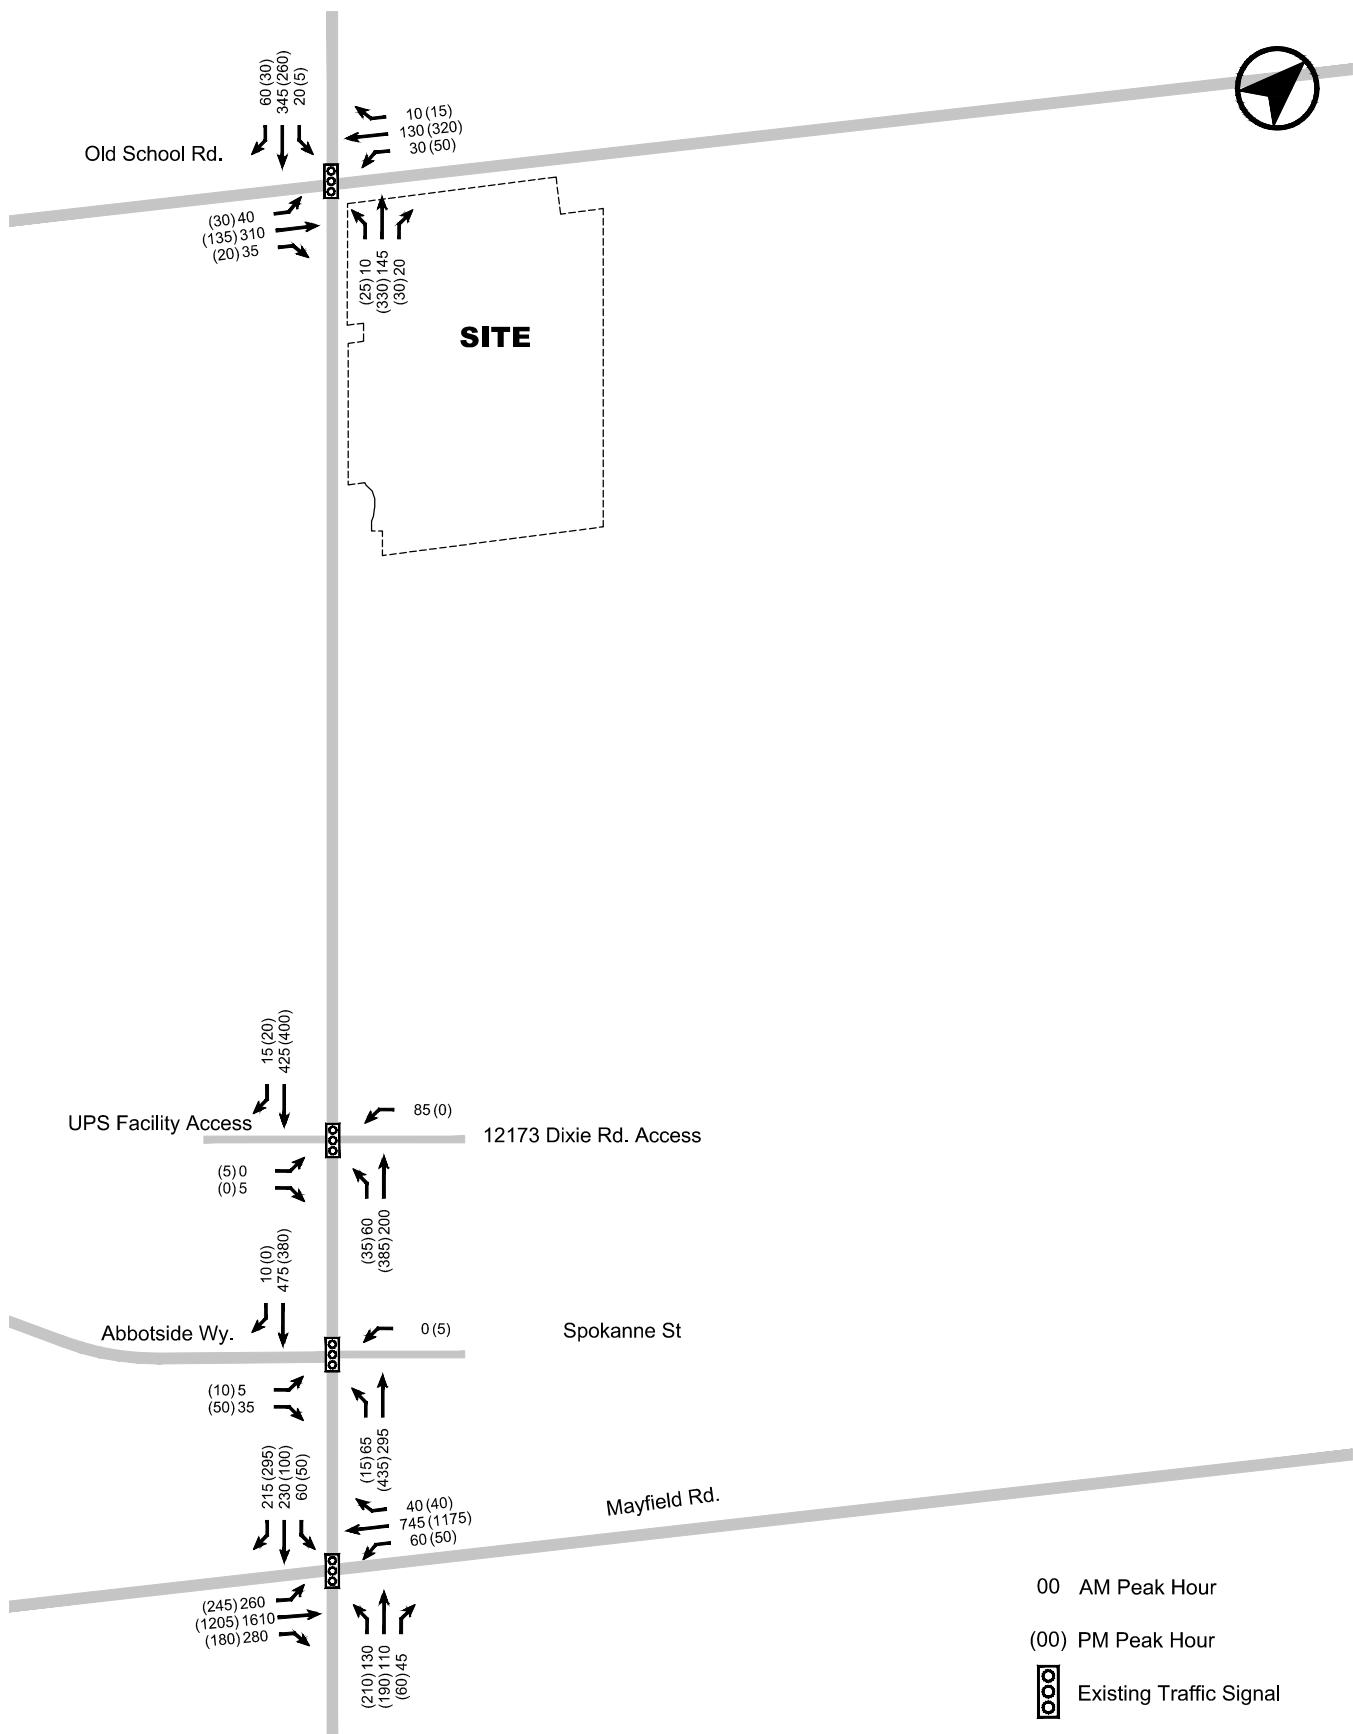

FIGURE 8 EXISTING TOTAL TRAFFIC VOLUMES

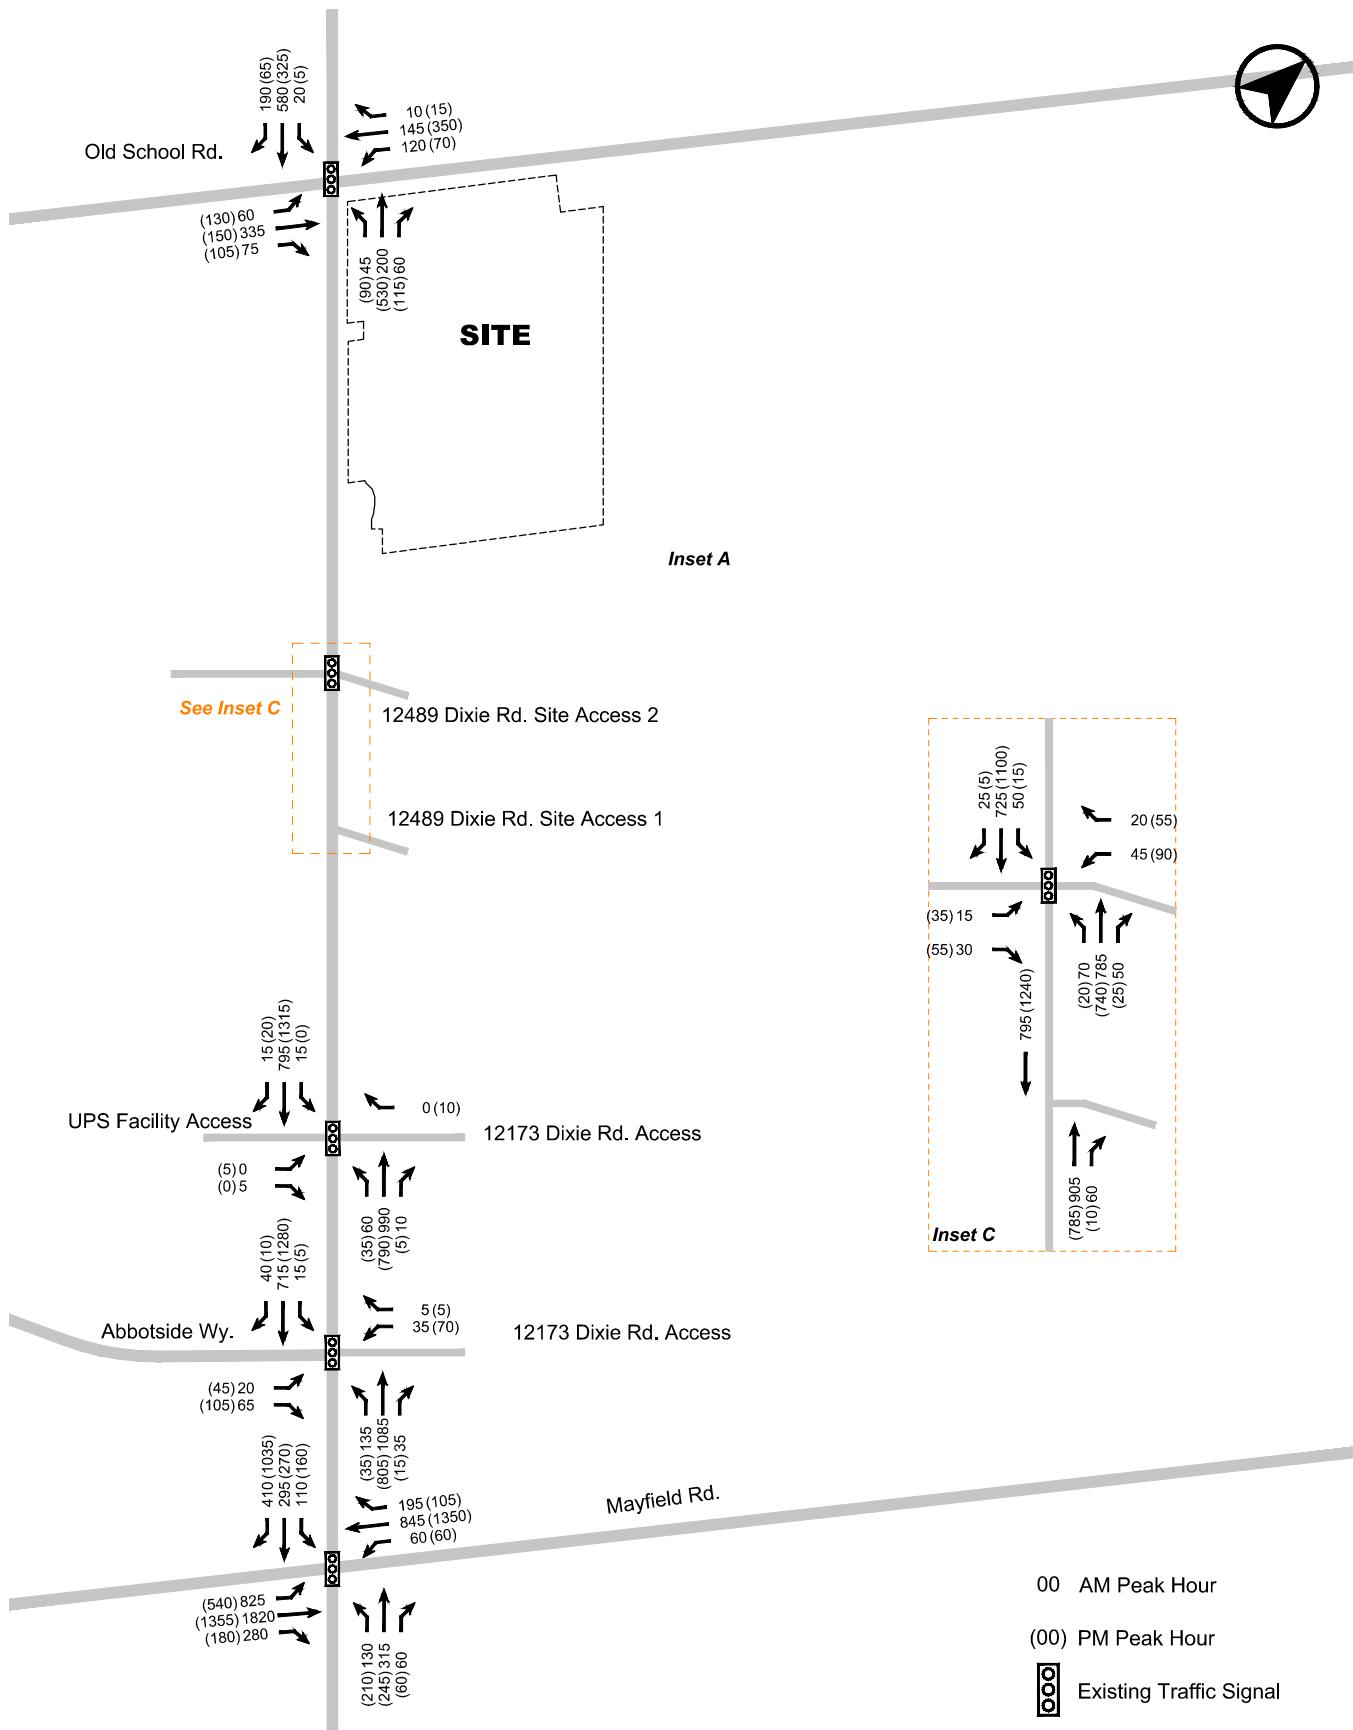

FIGURE 9 FUTURE BACKGROUND 2028 TOTAL TRAFFIC VOLUMES

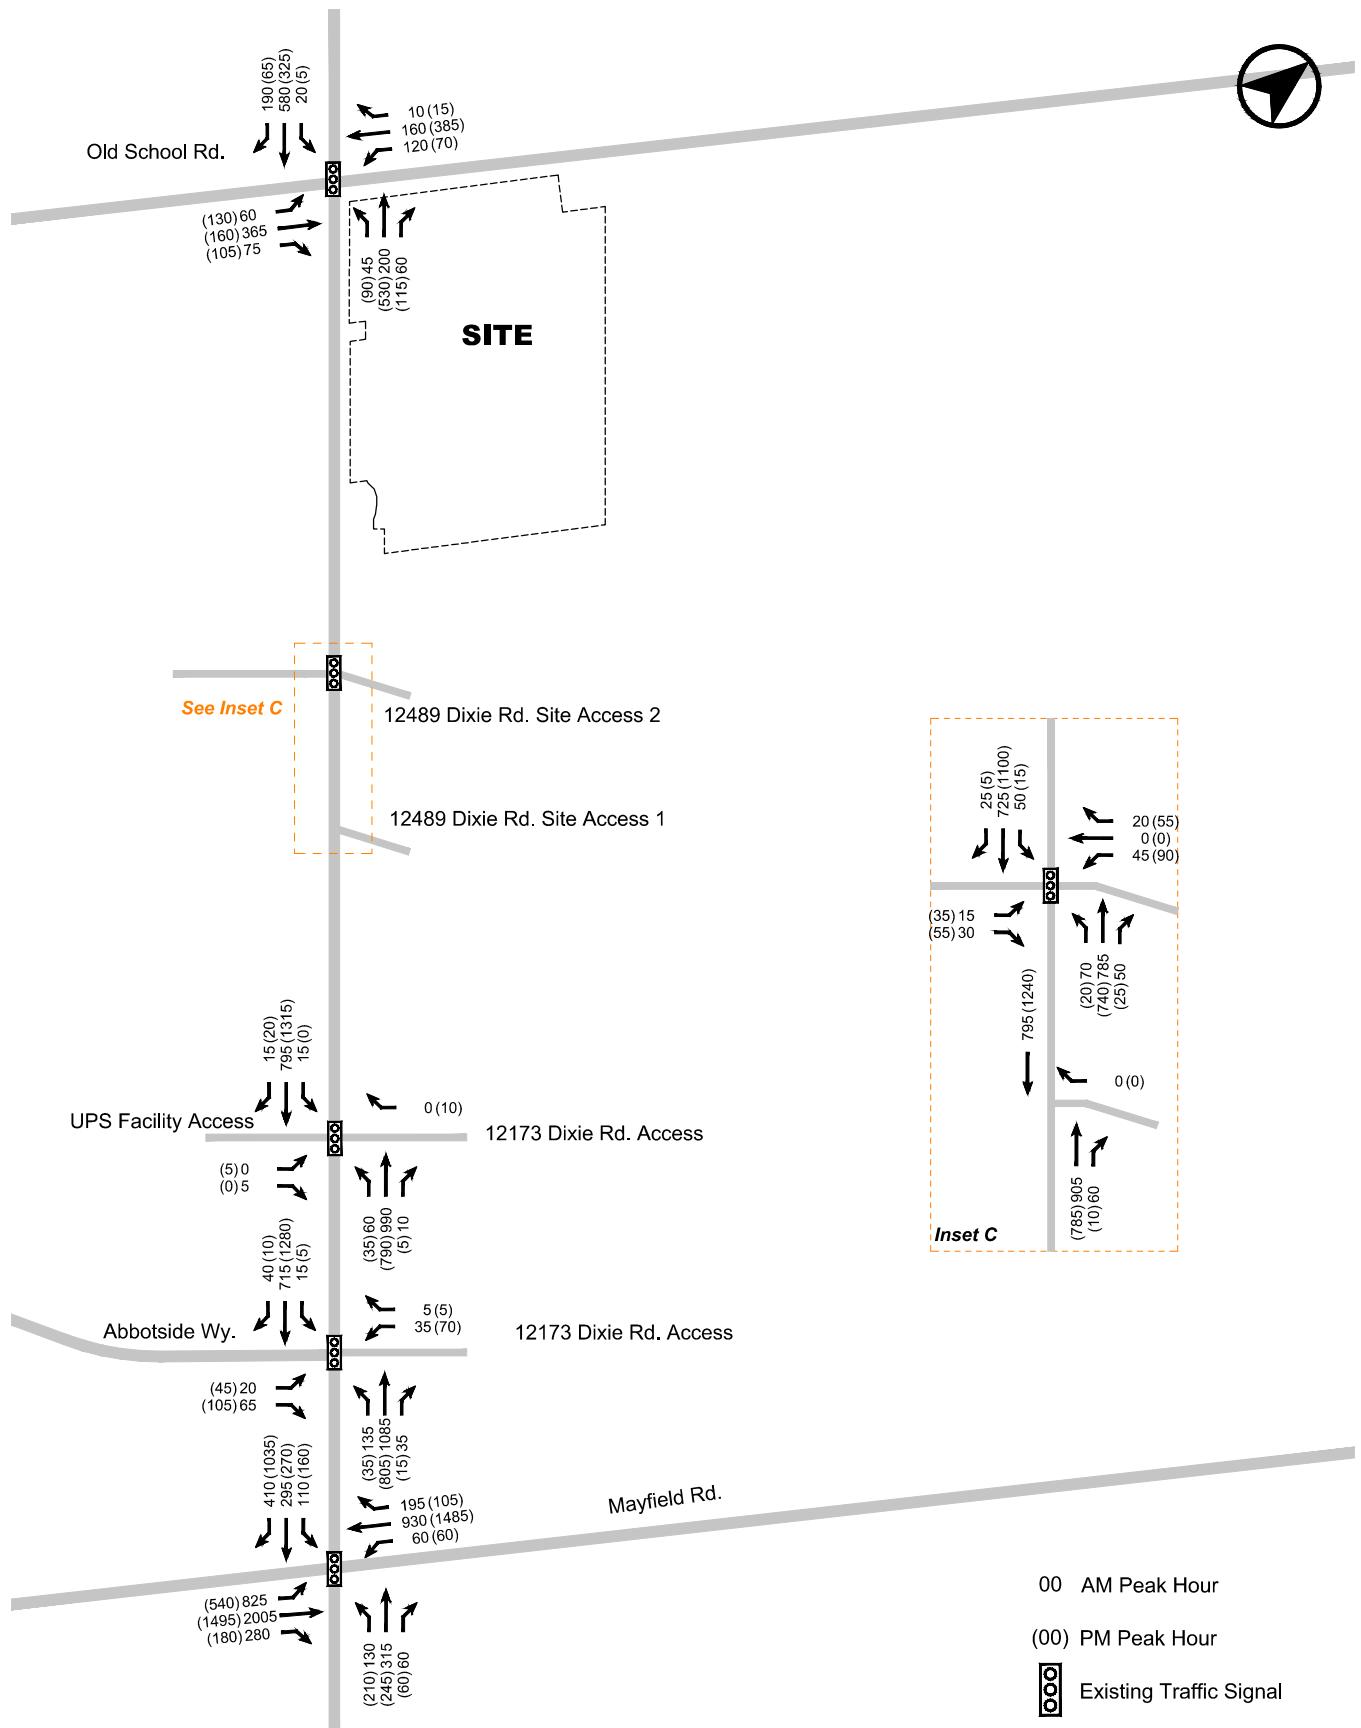

FIGURE 10 FUTURE BACKGROUND 2033 TOTAL TRAFFIC VOLUMES

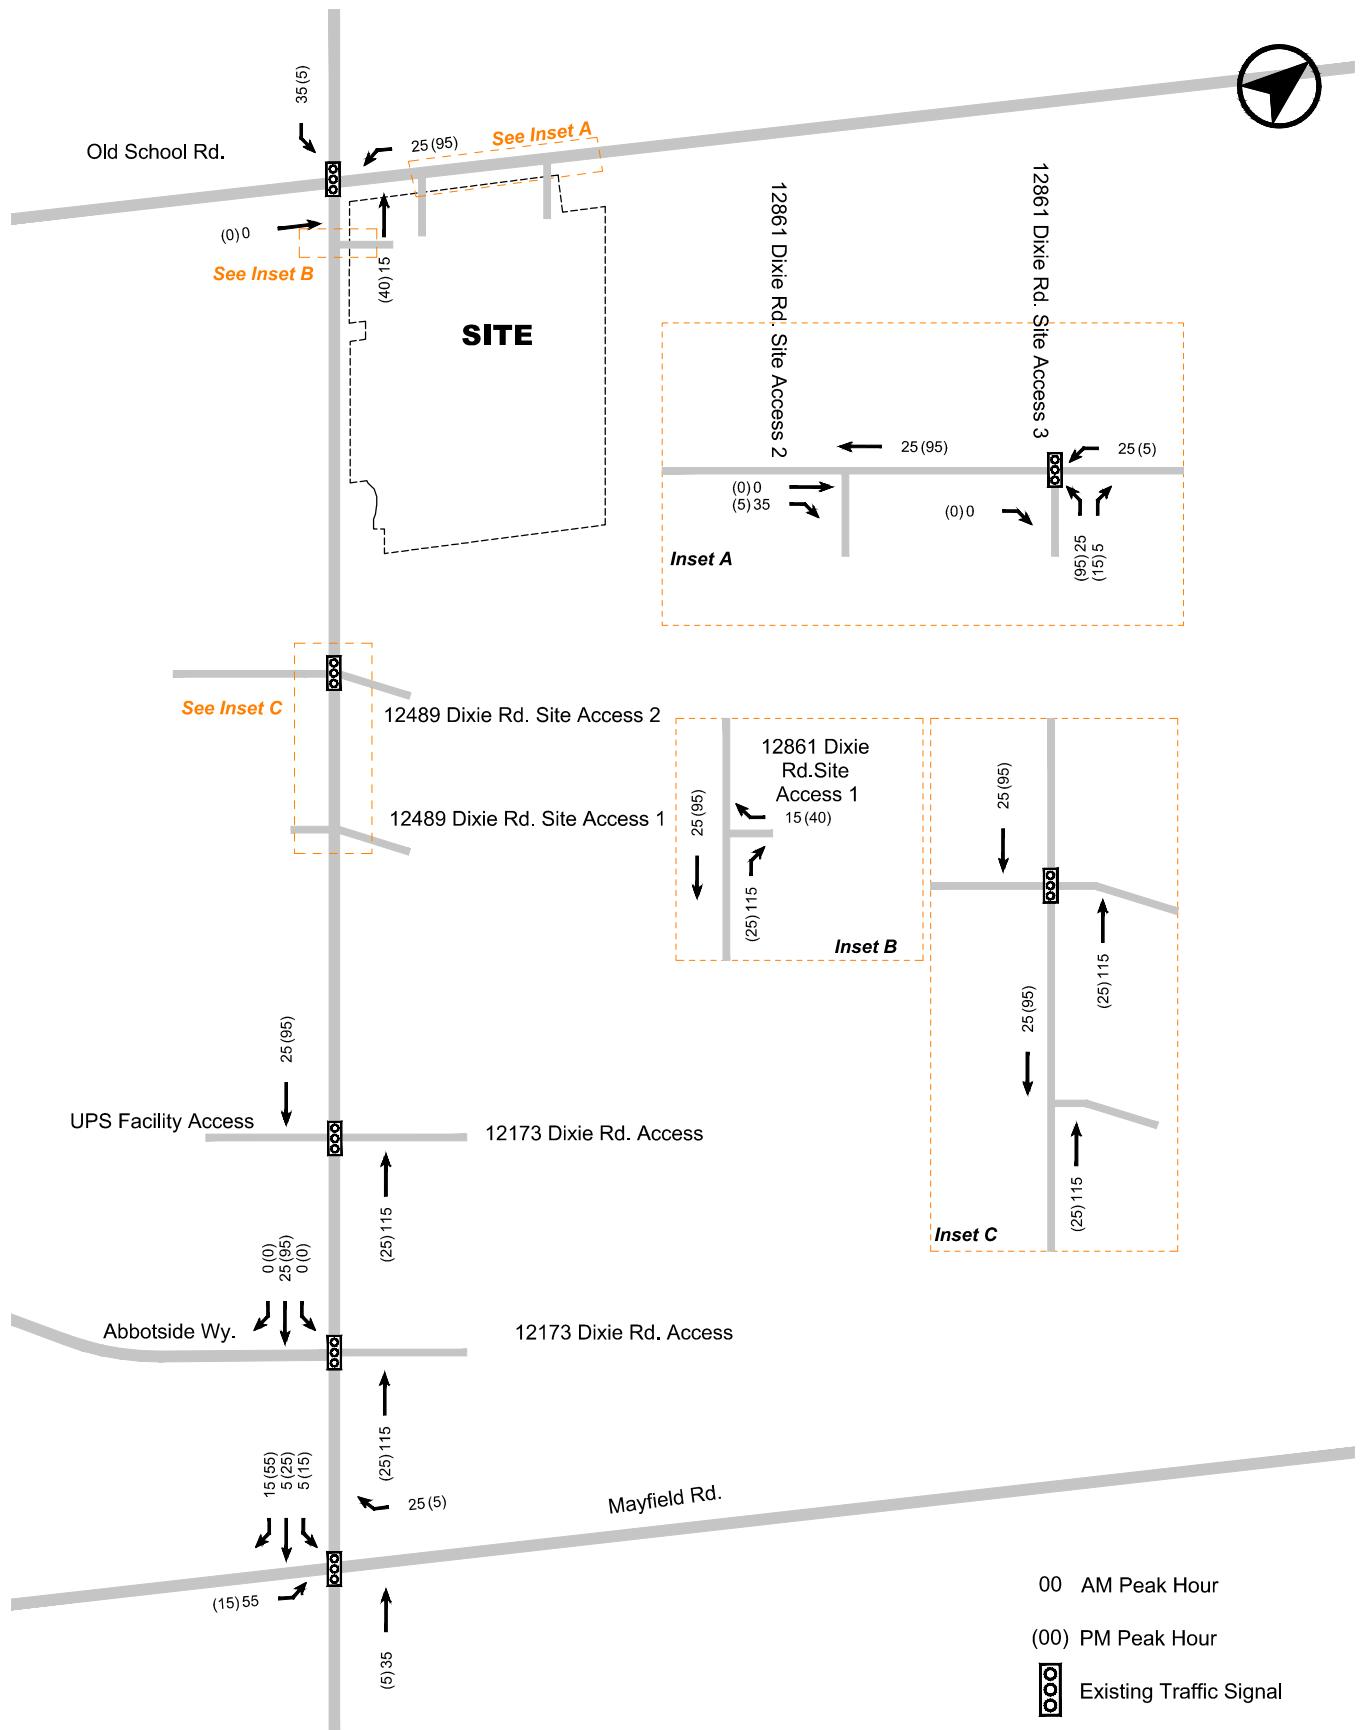

FIGURE 11 SITE LIGHT VEHICLE TRAFFIC VOLUMES

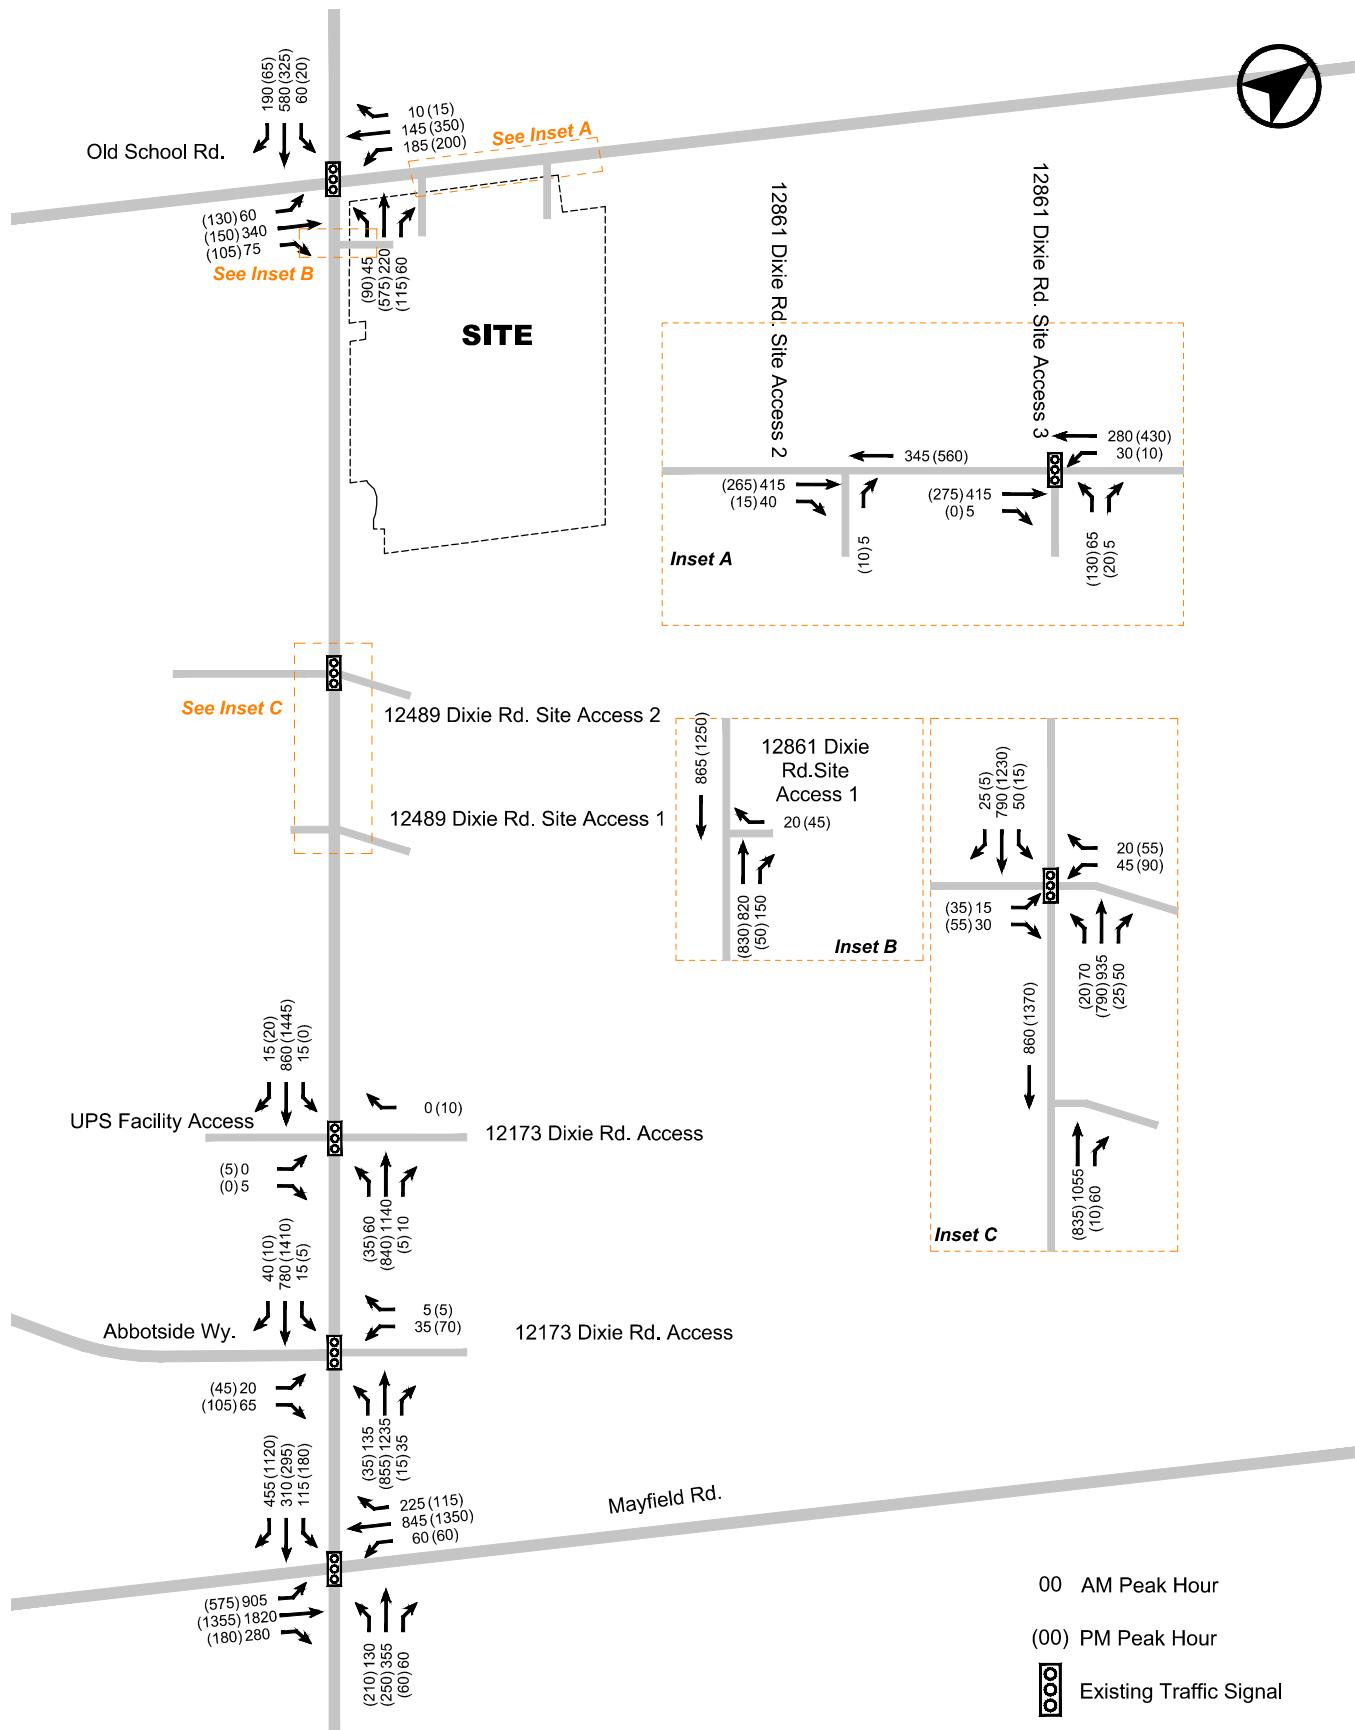

FIGURE 14 FUTURE TOTAL 2028 TOTAL TRAFFIC VOLUMES

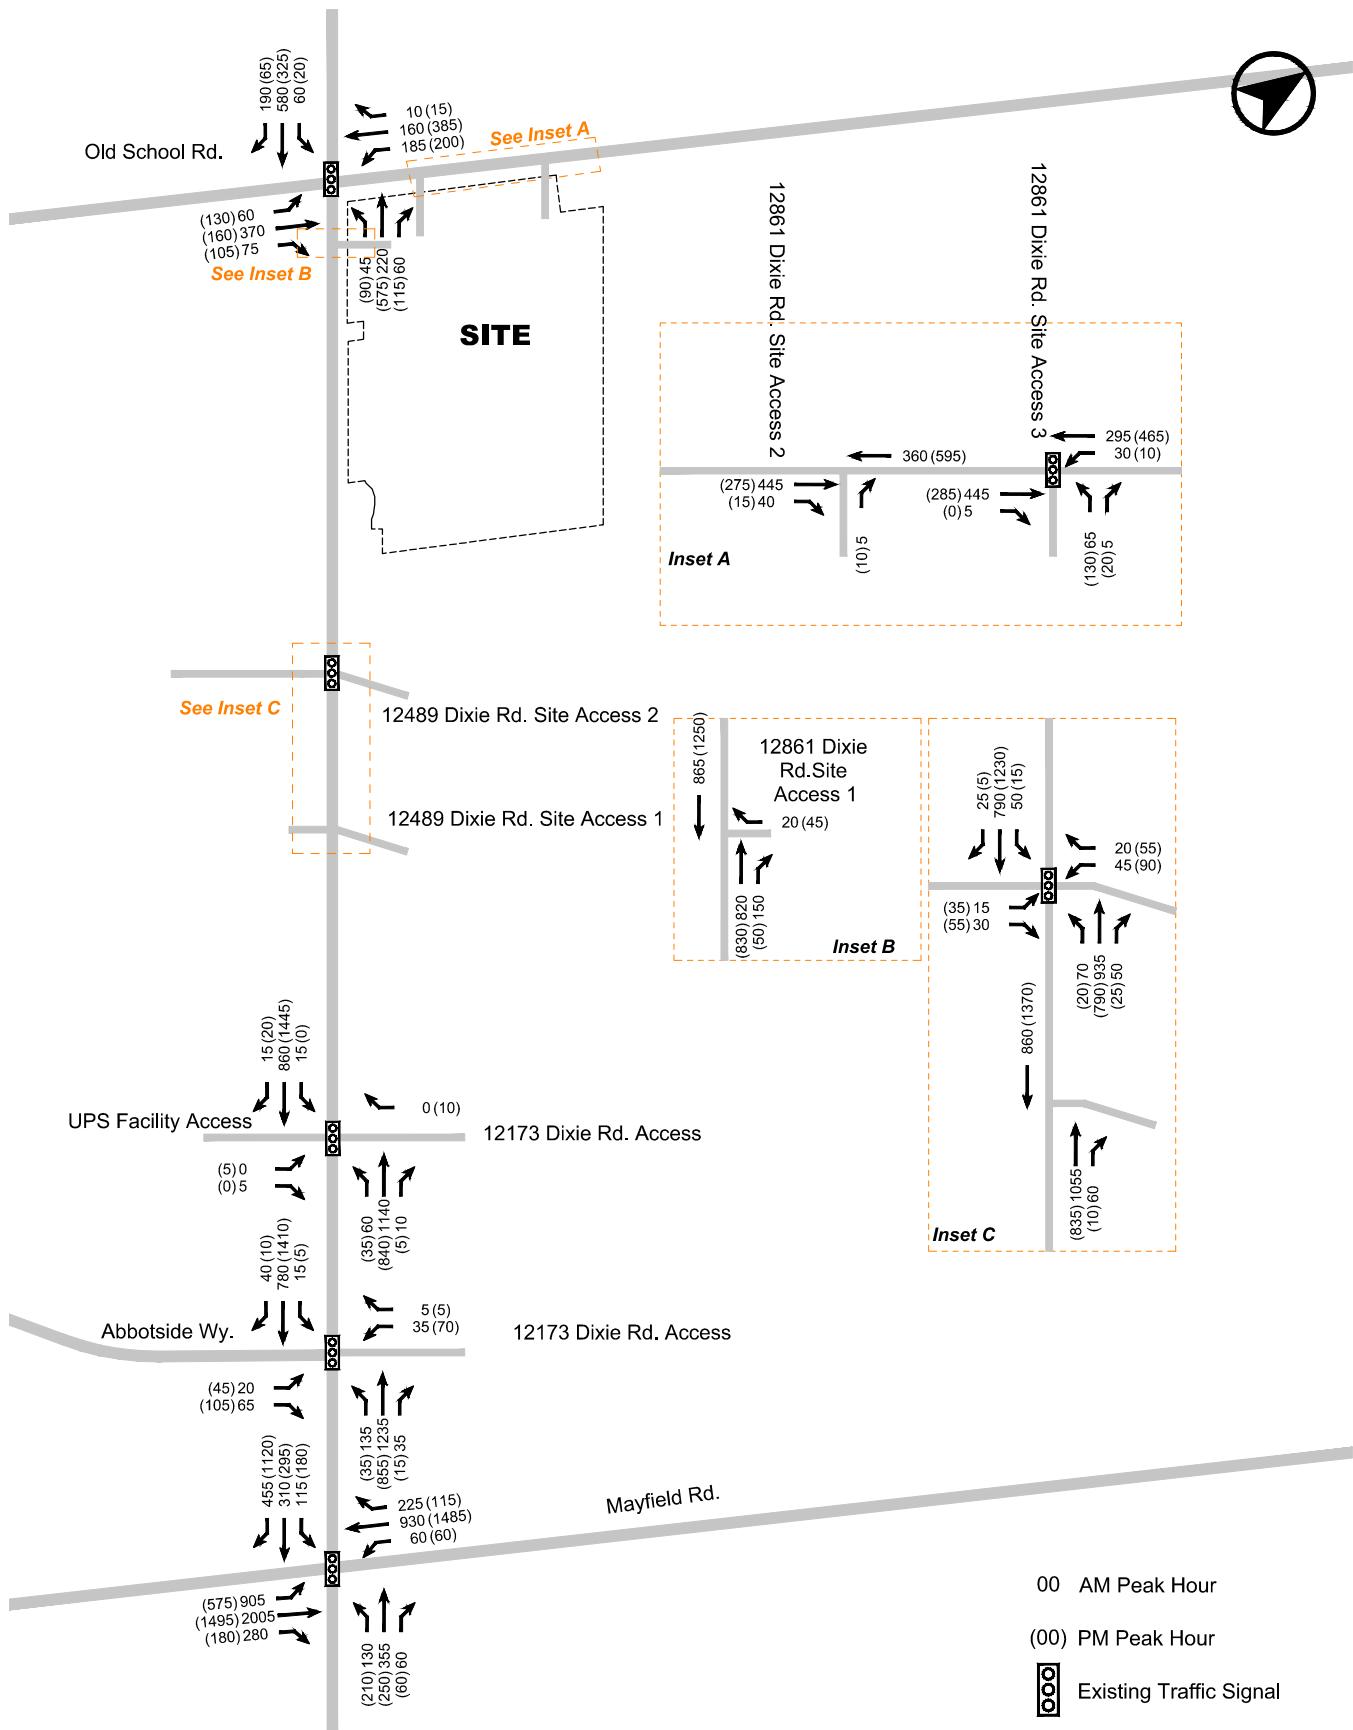

FIGURE 15 FUTURE TOTAL 2033 TOTAL TRAFFIC VOLUMES

8.0 TRAFFIC OPERATIONS ANALYSIS

8.1 TRAFFIC OPERATIONS SCENARIOS

A traffic operations analysis was completed for the following scenarios:

- Existing traffic conditions;
- Future background traffic conditions (2028 horizon year);
- Future total traffic conditions (2028 horizon year);
- Future background traffic conditions (2033 horizon year); and
- Future total traffic conditions (2033 horizon year).

8.2 ANALYSIS METHODOLOGY

The intersection capacity analysis was completed using Synchro Version 11 and the Highway Capacity Manual (HCM) methodology.

For signalized intersections, the volume-to-capacity ratio (v/c) is an indicator of the capacity utilization for the key movements in the intersection. A v/c of 1.00 indicates that certain governing traffic movements through the intersection are operating at or near maximum capacity. The primary overall level of service (LOS) indicator is delay, both on individual movements and expressed as an average for all vehicles processed.

For unsignalized intersections, LOS characterizes operational conditions for key movements in terms of delay within the traffic stream. LOS A represents a good level of service with short delays, and based on the Region of Peel's Synchro Guidelines, LOS E represents "an unacceptable LOS", and this implies long delays. The volume-to-capacity ratio (v/c) is an indicator of the capacity utilization for key movements at the intersection and the resultant residual capacity potential.

8.3 INPUT AND CALIBRATION PARAMETERS

Key parameters adopted in the analysis include:

Lane Configurations

Under all analysis scenarios, the existing lane configurations of the area road network were generally assumed as per existing conditions. Under the 2028 and 2033 horizons, it was assumed that Dixie Road would be widened to 4 lanes, as outlined in **Section 2.5.1** and Mayfield Road would be widened to 6 lanes, as outlined in **Section 2.5.2**. Future (2028 and 2033) lane configurations are shown in **Figure 16**.

Based on the Region of Peel's "Regional Guidelines for Using Synchro, Version 7.73 Rev 8" dated December 2010, lane widths have been adopted through auxiliary turn lanes as follows:

- 3.7 metres along through lanes on Regional Roads;
- 3.5 metres along turn lanes on Regional Roads; and
- 3.5 metres along through and turn lanes on City of Caledon Roads.

Traffic Signal Timings

Traffic signal timings have been obtained from the Region of Peel and are provided in **Appendix G**. The existing traffic signal timings have been adopted for existing conditions analysis.

Under future background and future total conditions, traffic signal timings have been optimized to best accommodate the forecasted future travel demands and patterns and to respond to evolving traffic conditions. Where traffic signal optimization is recommended, it has been noted in the subsequent sections discussing intersection operations.

It is noteworthy that the Dixie Road / Mayfield Road intersection's cycle length was extended from 120 seconds to 135 seconds, to maintain coordination with the other adjacent intersections such as at Bramalea Road / Mayfield Road. This cycle length coordination will also assist in reducing the queue lengths along the Mayfield Road corridor to prevent spill back into upstream intersections along the corridor.

Peak Hour Factors (PHF)

The Region of Peel's Synchro Guidelines states that the peak hour factor should be 1.00 for all movements on all approaches. This is applied to all intersections in all scenarios.

Pedestrian and Bicycle volumes

Pedestrian and bicycle volumes are based on those observed at the study area intersections under existing conditions.

Heavy Vehicle Percentages

Existing heavy vehicle percentages were derived from turning movement counts. For new site-related truck trips, percentages are calculated as referenced within **Section 7.4.3**.

Lost Time Adjustments

A lost time adjustment factor of -1.0 seconds was assumed for all left turn movements at the Dixie Road / Mayfield Road intersection as the proposed lane configuration and geometric design results in a wide cross-section, and therefore reduced headways expected of drivers as the intersection approaches capacity.

Synchro Defaults

Synchro defaults have been adopted for all other parameters.

SimTraffic Conditions

15-minute seeding was used for four (4 x 15) recordings (total analysis of 1 hour).

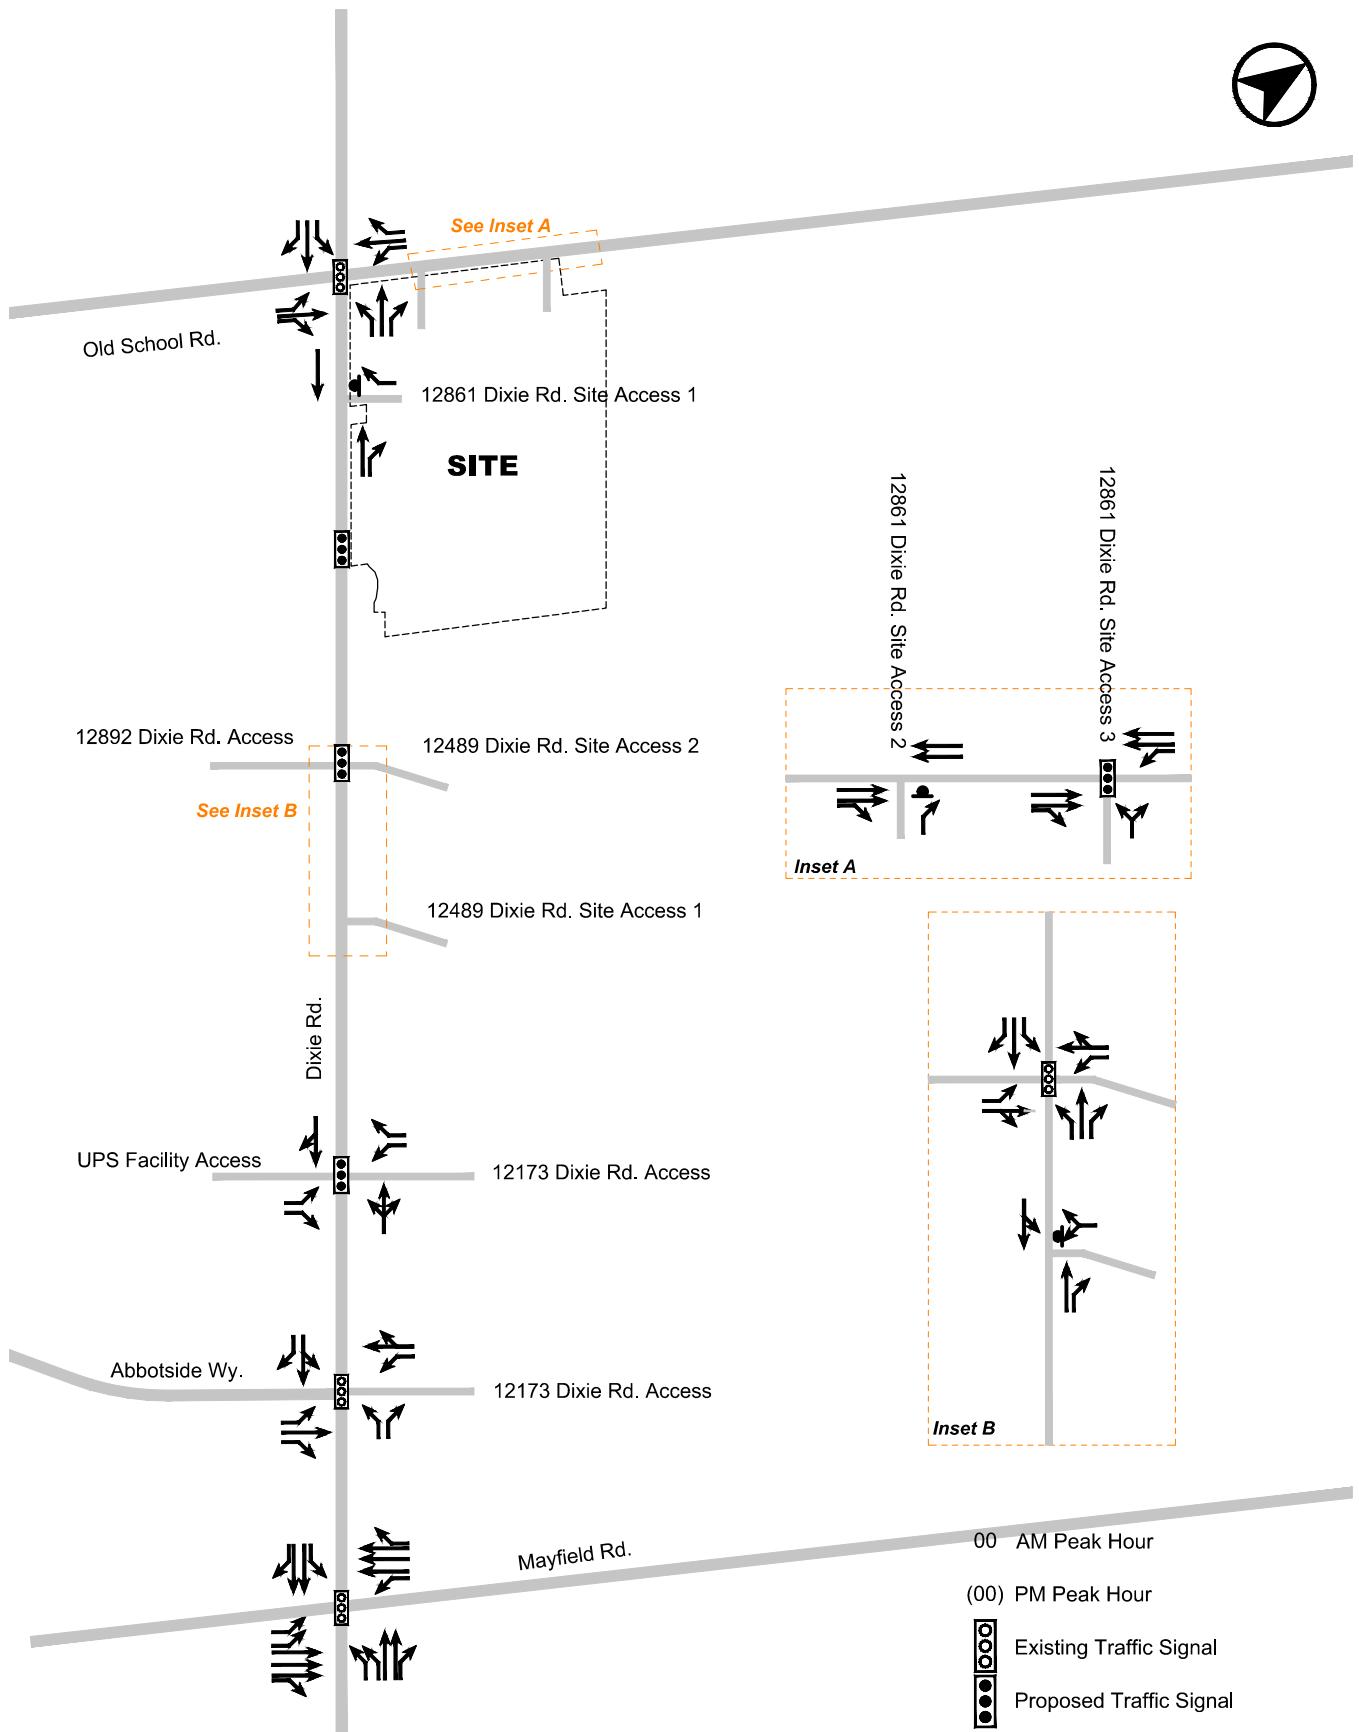

FIGURE 16 FUTURE (2028) LANE CONFIGURATION AND TRAFFIC CONTROL

8.4 STUDY AREA INTERSECTION OPERATIONS

The following sections discuss the operations of the study area intersections. Synchro reports are provided in **Appendix H**. Recommended network improvements are as follows.

It is recommended that in future analyses scenarios, the cycle length at the Dixie Road / Mayfield Road signalized intersection should be increased to 135 seconds during the weekday morning and afternoon peak periods, in order to maintain coordination with the other adjacent intersections such as at Bramalea Road / Mayfield Road. This cycle length coordination will also assist in reducing the queue lengths along the Mayfield Road corridor to prevent spill back into upstream intersections along the corridor.

Further recommendations include the signalization of the following site access intersections:

- Old School Road / Site Access 3

Signalization of the Site access would result in improved operations and improve the pedestrian experience by elevating the safety standards at the intersections. Signal warrant analyses in addition to additional discussion are provided within **Section 9.0**.

8.4.1 Signalized Intersections

8.4.1.1 Dixie Road / Mayfield Road

At Dixie Road / Mayfield Road, the intersection currently operates under traffic signal control with a cycle length of 120 seconds during both the weekday morning and afternoon peak hour periods. Under all future background and future total scenarios, signal phasings were optimized within the existing cycle length. It is recommended that in future analyses scenarios, the cycle length at the Dixie Road / Mayfield Road signalized intersection should be increased to 135 seconds during the weekday morning and afternoon peak periods, to maintain coordination with the other adjacent intersections such as at Bramalea Road / Mayfield Road. This cycle length coordination will also assist in reducing the queue lengths along the Mayfield Road corridor to prevent spill backs into upstream intersections along the corridor.

As mentioned in **Section 2.5.1**, Dixie Road is planned to be widened to 6 through lanes plus turning lanes from north of Queen Street to Countryside Drive and 4 through lanes plus turning lanes north of Countryside Drive to approximately two kilometres north of Mayfield Road.

The traffic signal analysis results are summarized in **Table 13**.

Under existing conditions, the intersection operates with overall v/c ratios of 0.78 and 0.67, in the weekday morning and afternoon peak hours, respectively.

Under future background (2028) conditions and a cycle length of 135 seconds, the intersection will operate with overall v/c ratios of 0.72 and 0.92, in the weekday morning and afternoon peak hours, respectively.

Under future total (2028) conditions and a cycle length of 135 seconds, as the proposed development is fully developed, the intersection will operate with overall v/c ratios of 0.78 and 1.02, in the weekday morning and afternoon peak hours, respectively. Although the intersection operates at an overall v/c ratio of 1.02 in the weekday afternoon peak hour period, all individual movements operate under a v/c ratio of 1.0.

Under future background (2033) conditions and a cycle length of 135 seconds, the intersection will operate with overall v/c ratios of 0.74 and 0.93, in the weekday morning and afternoon peak hours, respectively.

Under future total (2033) conditions and a cycle length of 135 seconds, as the proposed development is fully developed, the intersection will operate with overall v/c ratios of 0.80 and 1.01, in the weekday morning and afternoon peak hours, respectively. Although the intersection operates at an overall v/c ratio of 1.01 in the weekday afternoon peak hour period, all individual movements operate under a v/c ratio of 1.00.

Based on the foregoing, no further improvements or mitigation measures, aside from traffic signal timing optimization and cycle length extension to accommodate existing travel flows, are recommended at this intersection, as an increase of the cycle length of the Dixie Road / Mayfield Road intersection brought measurable operational improvements. Overall, it is projected that Site traffic can be accommodated at this intersection with minimal impacts.

8.4.1.2 Dixie Road / Abbotside Way / 12173 Site Access

The Dixie Road / Abbotside Way / 12173 Site Access intersection currently operates under unsignalized control and is proposed to be signalized as part of the 12173 Dixie Road site development, and therefore included within all future traffic scenarios.

Under future background (2028) conditions, the intersection will operate with overall v/c ratios of 0.42 and 0.52, in the weekday morning and afternoon peak hours, respectively.

Under future total (2028) conditions, as the Proposed Development is fully developed, the intersection will operate with overall v/c ratios of 0.49 and 0.59, in the weekday morning and afternoon peak hours, respectively.

Under future background (2033) conditions, the intersection will operate with overall v/c ratios of 0.42 and 0.52, in the weekday morning and afternoon peak hours, respectively.

Under future total (2033) conditions, as the Proposed Development is fully developed, the intersection will operate with overall v/c ratios of 0.49 and 0.59, in the weekday morning and afternoon peak hours, respectively.

Based on the foregoing, no further improvements or mitigation measures are recommended at this intersection. Overall, it is projected that Site traffic can be accommodated at this intersection with minimal impacts.

8.4.1.3 Dixie Road / UPS Facility Access / 12173 Site Access

The Dixie Road / UPS Facility Access / 12173 Dixie Road Access currently operates under unsignalized control, and is proposed to be signalized as part of the 12173 Dixie Road site development. Therefore, signalization has been assumed for all future traffic scenarios.

Under future background (2028) conditions, the intersection will operate with overall v/c ratios of 0.56 and 0.86, in the weekday morning and afternoon peak hours, respectively.

Under future total (2028) conditions, as the Proposed Development is fully developed, the intersection will operate with overall v/c ratios of 0.65 and 0.98, in the weekday morning and afternoon peak hours, respectively.

Under future background (2033) conditions, the intersection will operate with overall v/c ratios of 0.56 and 0.86, in the weekday morning and afternoon peak hours, respectively.

Under future total (2033) conditions, as the Proposed Development is fully developed, the intersection will operate with overall v/c ratios of 0.65 and 0.98, in the weekday morning and afternoon peak hours, respectively.

Based on the foregoing, no further improvements or mitigation measures are recommended at this intersection. Overall, it is projected that Site traffic can be accommodated at this intersection with minimal impacts.

8.4.1.4 Dixie Road / 12489 Dixie Road Site Access 2 / 12892 Dixie Road South Signal Access

The Dixie Road / Site Access 2 / 12489 Dixie Road Access intersection does not exist under existing conditions and is proposed as part of the 12173 Dixie Road site development. Therefore, it has been included in all future traffic scenarios.

Under future background (2028) conditions, the intersection will operate with overall v/c ratios of 0.54 and 0.77, in the weekday morning and afternoon peak hours, respectively.

Under future total (2028) conditions, as the Proposed Development is fully developed, the intersection will operate with overall v/c ratios of 0.67 and 0.89, in the weekday morning and afternoon peak hours, respectively.

Under future background (2033) conditions, the intersection will operate with overall v/c ratios of 0.54 and 0.77, in the weekday morning and afternoon peak hours, respectively.

Under future total (2033) conditions, as the Proposed Development is fully developed, the intersection will operate with overall v/c ratios of 0.67 and 0.89, in the weekday morning and afternoon peak hours, respectively.

Based on the foregoing, no further improvements or mitigation measures are recommended at this intersection. Overall, it is projected that Site traffic can be accommodated at this intersection with minimal impacts.

8.4.1.5 Old School Road / Site Access 3

The Old School Road / Site Access 3 intersection does not exist under existing conditions and is proposed to be signalized as part of the Site development. Therefore, it has been included in all future traffic scenarios.

Under future background (2028) conditions, the intersection will operate with overall v/c ratios of 0.13 and 0.13, in the weekday morning and afternoon peak hours, respectively.

Under future total (2028) conditions, as the Proposed Development is fully developed, the intersection will operate with overall v/c ratios of 0.20 and 0.25, in the weekday morning and afternoon peak hours, respectively.

Under future background (2033) conditions, the intersection will operate with overall v/c ratios of 0.14 and 0.14, in the weekday morning and afternoon peak hours, respectively.

Under future total (2033) conditions, as the Proposed Development is fully developed, the intersection will operate with overall v/c ratios of 0.21 and 0.26, in the weekday morning and afternoon peak hours, respectively.

Based on the foregoing, no further improvements or mitigation measures are recommended at this intersection. Overall, it is projected that Site traffic can be accommodated at this intersection with minimal impacts.

8.4.1.6 Dixie Road / Old School Road

The Dixie Road / Old School Road currently operates under signalized control.

Under existing conditions, the intersection will operate with overall v/c ratios of 0.58 and 0.49, in the weekday morning and afternoon peak hours, respectively.

Under future background (2028) conditions, the intersection will operate with overall v/c ratios of 0.62 and 0.60, in the weekday morning and afternoon peak hours, respectively.

Under future total (2028) conditions, as the Proposed Development is fully developed, the intersection will operate with overall v/c ratios of 0.69 and 0.64, in the weekday morning and afternoon peak hours, respectively.

Under future background (2033) conditions, the intersection will operate with overall v/c ratios of 0.69 and 0.64, in the weekday morning and afternoon peak hours, respectively.

Under future total (2033) conditions, as the Proposed Development is fully developed, the intersection will operate with overall v/c ratios of 0.71 and 0.66, in the weekday morning and afternoon peak hours, respectively.

Based on the foregoing, no further improvements or mitigation measures are recommended at this intersection. Overall, it is projected that Site traffic can be accommodated at this intersection with minimal impacts.

8.4.2 Unsignalized Intersections

Unsignalized intersection capacity results have been summarized in **Table 19**. The area unsignalized intersections all operate at an LOS of A or better under all future total scenarios. Therefore, site traffic can be readily accommodated at the network unsignalized intersections.

TABLE 19 UNSIGNALIZED INTERSECTION CAPACITY ANALYSIS RESULTS

Notes:

1. XX (XX) – Weekday Morning Peak Hour (Weekday Afternoon Peak Hour).

8.5 QUEUING ANALYSIS

To determine the queueing impacts of the proposed development on the study area intersections, a queuing analysis was undertaken using SimTraffic 11 for all study scenarios.

For these analyses, a 15-minute seeding was used for 4 (4) x 15-minute recordings (total analysis of 1 hour). The analysis determined 95th percentile queue lengths for all intersection movements during the weekday morning and afternoon peak hours.

Queueing issues for all turning movements are expected to be minimal. While some 95th percentile queues extend beyond the assumed storage length, they typically do so within the effective taper lengths, allowing passengers to queue without obstructing the through lanes.

Critically, all movements operate at v/c ratios below 1.0, confirming that even when queues spill into the taper, they will fully clear within each signal cycle.

Table 20 summarizes the 95th percentile reported queuing lengths for key movements in both the weekday morning and weekday afternoon peak hours. Full SimTraffic results are shown in **Appendix I**. Assumed storage lengths have been added to each intersection movement. Storage lengths for all turning movements have been included within the table.

TABLE 20 95TH PERCENTILE SIMTRAFFIC QUEUE LENGTHS

9.0 SIGNAL WARRANT

A signal warrant analysis was completed for the proposed new intersections within the study network. Specifically, the warrants reviewed the Site driveway intersection on Dixie Road. Warrants were conducted based on the methodologies outlined in Ontario Traffic Manual (OTM) Book 12. Signal warrant calculation sheets are attached in **Appendix J**.

The 8-hour vehicular traffic for the proposed intersections was projected based on existing peak 8-hour temporal vehicular data, collected by Spectrum Traffic Data Inc. on November 14th, 2023 at the Dixie Road / UPS Facility Access, and forecasted future total traffic for each horizon year. Site vehicular traffic was forecasted based on 24-hour temporal data collected by BA Group at Industrial proxy sites.

The following intersections were assessed as part of the signal warrant analysis:

- Old School Road / Site Access 3

The signal warrant analysis was undertaken using the free flow criteria outlined in the OTM.

9.1 SIGNAL WARRANT RESULTS

The proposed signalized intersection has been assessed based on Justifications 1, 2, 3, and 7 of the OTM signal warrant procedure.

A summary of the outcomes of the signal justification analysis for the 2033 horizon year is summarized in **Table 21**.

TABLE 21 FREE FLOW SIGNAL WARRANT ANALYSIS – 2033 FUTURE TOTAL TRAFFIC

Intersection	Justification 1 – Min. Vehicular Volume		Justification 2 – Delay to Cross Traffic		Justification 3 – Combination		Justification 7 – Projected Volumes			Justified?
Old School Road / Site Access 3	1A	80%	2A	70%	1	55%	1	100%	53%	NO
	1B	55%	2B	95%	2	70%	2	97%	100%	
	Not Warranted		Not Warranted		Not Warranted		Not Warranted			

9.2 SIGNAL WARRANT ANALYSIS SUMMARY

The signal warrant analysis indicates that a traffic signal along Old School Road / Site Access 3 is not warranted under future total conditions by the 2033 horizon year according to the free flow warrant procedure. Signalization at Old School Road / Site Access 3 is not required as per the warrant criteria, however, a traffic signal is desirable to improve the multiple existing and anticipated concerns within the network.

As the area network is proposed to be an industrial corridor, it is expected to experience unique traffic patterns characterized by the movement of large vehicles, such as trucks and industrial equipment, which may not align with signal warrant threshold criteria. In such cases, a signal can enhance safety by regulating the flow of both vehicular and pedestrian traffic, minimizing the risk of collisions and facilitating the smooth movement of traffic. Implementing a signal at this intersection can optimize traffic management, reduce delays, and enhance overall accessibility. Ultimately, prioritizing safety and efficiency in such an industrial corridor, even when signal warrants are not met, reflects a proactive approach to traffic management.

As such, it is recommended that the traffic signal at the intersection be installed before the full build-out of the Site to accommodate the vehicular demand and reduce conflicts between vehicles and other modes of travel, accommodate anticipated vehicular delays associated with all future development, and further improve site circulation safety due to better regulate access to Old School Road to and from the Site.

10.0 LEFT TURNING LANE WARRANTS

Turning lane warrants have been undertaken by BA Group to confirm the need for left turn lanes at the Site accesses intersecting with Old School Road.

Old School Road / Site Access 3

In both the 2028 and 2033 scenarios (after full-build out of the development), the Old School Road / Site Access 3 intersection is projected to handle peak hour traffic volumes of up to 30 vehicles per hour making a left turn from the east into the site.

Additionally, up to 5 inbound vehicles per hour are expected to complete a right turn into the site from the west during both the morning and afternoon peak hour periods.

A left lane warrant analysis was undertaken using the MTO Geometric Design Standards for Ontario Highways. These volumes represent a percentage of the traffic stream that a westbound left turn at Old School Road would not result in a dedicated left turn lane being warranted or required under both future total horizons.

In order to optimize traffic flow and safety, a dedicated left-turn lane should be incorporated into the future road network. This improvement will mitigate delays across all horizon years by separating turning movements, particularly for heavy vehicles, from through traffic. By providing trucks with direct access to the signalized intersection (the development's primary entry point), congestion for through vehicles will be reduced, enhancing both network efficiency and safety for all users.

Left turn warrant sheets are attached in **Appendix K**.

11.0 TRANSPORTATION DEMAND MANAGEMENT (TDM)

11.1 TDM PLAN OBJECTIVES

The Transportation Demand Management (TDM) Plan strives to reduce automobile use as a part of the design and construction of the development, as well as after construction as an ongoing strategy by supporting and promoting the use of non-auto travel modes.

The key objective of the TDM Plan is to reduce peak-hour single-occupant automobile traffic by focusing on four specific policy areas:

1. encourage the use of alternate travel modes (transit, cycling, walking);
2. increase vehicle occupancy;
3. shift travel to off-peak periods; and
4. reduce vehicle kilometres travelled.

11.2 SITE TRANSPORTATION CONTEXT AND USE CHARACTERISTICS

The Site is served by transit services operated by Brampton Transit, with bus routes 15 and 18 stops located within a 3-kilometre radius at the Mayfield Road / Bramalea and Inspire Boulevard / Dixie Road intersections, respectively. An additional bus stop is planned to be added to the local transit network, on the southeast side of the Dixie Road / Abbotside Avenue intersection. Opportunities for additional stops, further north on Dixie Road, are available as a result of the Region of Peel's planned widening of Dixie Road, subject to Brampton Transit's future planning.

Bicycle infrastructure in the vicinity of the Site includes a multi-use path located along the south side of Mayfield Road, in addition to a planned multi-use path on the west side of Dixie Road, which subsequently provides connections to the wider bicycle network within the City of Brampton.

A sidewalk is proposed along Dixie Road and Old School Road to facilitate pedestrian movement. Despite the minimal pedestrian infrastructure, further improvements to the active transportation realm are being proposed with the development of the Site. Pedestrian connections through sidewalks are planned along the east side of Dixie Road, to improve connections to the multi-use path and pedestrian network along Mayfield Road and the south side of Dixie Road. Furthermore, the addition of three signals, as referenced within **Sections 8.4**, and **9.0**, would further improve pedestrian and cyclist connectivity to the external active transportation networks.

11.3 TDM PLAN STRATEGIES

11.3.1 Overview

Based upon the Site context and proposed land uses, recommended TDM strategies are summarized in **Table 22**.

TABLE 22 RECOMMENDED SITE TDM MEASURES

Measure	Description	Cost Estimate	Implementation Strategy
Carpool	Encourage tenants to create and promote internal carpool program	TBD	Owner to encourage tenant upon occupancy
	Encourage tenants to include Emergency Ride Home (provide taxi chit up to a dollar amount for employees when carpool plans fall through due to an emergency)	TBD	Owner to encourage tenant upon occupancy
	Encourage tenants to run carpool promotional campaigns	TBD	Owner to encourage tenant upon occupancy
	Include designated signed carpool spots within the Site parking facilities.	TBD	Owner to encourage tenant upon occupancy
Transit Incentives	Building management to provide transit information package to new employees	TBD	Upon occupancy
	Provide convenient, high-quality and accessible pedestrian connections oriented towards adjacent transit stop facilities.	Integrated into overall development cost	Construct as part of development
Walking Incentives	Provide safe pedestrian-scale connections from the Site to the surrounding public street network, such as the proposed signalization of the Site access driveways along Old School Road	Integrated into overall development cost	Construct as part of development
	Maintain on-site pedestrian facilities to enable year-round pedestrian access and usage	TBD	Upon occupancy
	Enhance the quality of the public realm through provision of pedestrian-scale landscaping and appropriate sidewalk widths	Integrated into overall development cost	Construct as part of development

11.3.2 Carpool Incentives

In an effort to increase the viability and attractiveness of carpooling, a number of carpool incentives are recommended as outlined below.

- **Internal carpool program:** The implementation and promotion of an internal carpool program would increase the visibility of carpooling as an alternative, whilst also facilitating and improving the viability of carpooling by assisting with carpool matching. Tenants will be encouraged to establish an internal carpool program in accordance with the above.

- **Emergency Ride Home:** The implementation of an emergency ride home program increases the attractiveness of carpooling as a mode by addressing one of the potential issues that can arise when carpooling. Tenants will be encouraged to have taxi chits be made available (up to a dollar amount) for employees when carpool plans fall through due to an emergency.
- **Promotional Campaign:** The implementation of promotional carpool campaigns such as carpool to work weeks with reward incentives, will encourage the tenants of the building to explore carpooling as an alternative. Tenants will be encouraged to establish promotional carpool campaigns in accordance with the above. Carpool signs would be additionally placed on 10 parking spaces to further encourage employee carpooling.

11.3.3 Transit Incentives

In an effort to increase the viability and attractiveness of transit, a number of transit incentives are recommended as outlined below.

- **Transit information package:** The provision of a transit information package to new employees will educate them on the available services in the area and increase the visibility of transit as an alternative. Building management to provide a transit information package to employees upon occupation.
- **Pedestrian connections to transit:** Convenient, high quality and accessible pedestrian connections towards adjacent transit stop facilities improve the ease of using transit and supplements transit as a viable mode.
- **Transit-oriented signalization:** Installing signals at intersections in proximity to transit stops to safeguard pedestrians, particularly during peak commuter arrivals and departures, ensures safe crossing to access the site or transit facilities.
- **Active-transportation oriented signalization:** Signalization of the Old School Road site access intersection improves pedestrian and cycling safety and connectivity to the multi-use paths on Dixie Road and Mayfield Road.

11.3.4 Walking Incentives

To increase the viability and attractiveness of walking as a mode, several walking incentives are recommended as outlined below.

- **Pedestrian connections to street network:** Providing safe pedestrian-scale connections from the Site to the surrounding public street network increases the attractiveness and viability of walking as a transportation mode.
- **Maintenance of on-site pedestrian facilities:** On-site pedestrian facilities will be maintained year-round to enable year-round pedestrian access and usage.
- **Pedestrian-scale landscaping and sidewalk widths:** It is proposed to enhance the quality of the public realm through the provision of pedestrian-scale landscaping and appropriate sidewalk widths, increasing the attractiveness of walking as a transportation mode.
- **Signalization of high-activity intersections:** Signalization of several site access intersections within proximity of transit stops to increase pedestrian safety and connectivity to the external sidewalk network.

12.0 SUMMARY AND CONCLUSIONS

General

1. The Proposed Development contemplates the development of the Site for the purpose of two new industrial buildings with an overall floor area of 188,718 square metres.
2. A total of 1,972 car parking spaces (including 29 accessible parking spaces) are proposed across the Site, located at grade. The proposed parking provision also includes provision of 24 electric vehicle (EV) spaces.
3. A loading zone is proposed at the rear of the building, comprising a total of up to 252 potential loading docks
4. Barrier-free/accessible pedestrian access is proposed to Dixie Road.

Car Parking

5. Application of the comprehensive Town of Caledon Zoning By-Law 2006-50 industrial car parking standards results in a requirement to provide a minimum of 1,271 parking spaces.
6. The proposed provision of 1,982 car parking spaces exceeds the requirements of the Town of Caledon Zoning By-Law 2006-50.
7. A total of 44 accessible car parking spaces are proposed, which meets the requirements of the Town of Caledon By-Law 2015-058.
8. Whilst not a requirement, the proposed car parking supply also includes a provision of 24 electric vehicle (EV) spaces.

Loading and Servicing

9. Application of Zoning By-Law 2006-50 loading standards to the Proposed Development requires a total of 25 loading spaces.
10. A total of 394 potential loading docks are proposed at the rear of the building. The proposed provision exceeds the requirements of the Town of Caledon Zoning By-Law 2006-50. Given the proposed warehouse land use, the potential loading provision is based upon meeting market requirements for typical warehouse tenants.

Vehicle Traffic

11. The overall development programme is anticipated to generate approximately 320 and 280 two-way vehicle trips during the AM and PM peak hours respectively.

Traffic Operations

12. Under existing conditions, all area signalized intersections currently operate acceptably during the weekday morning and afternoon peak hours.
13. With the addition of background traffic, for the horizon years of 2028 and 2033, the area signalized intersections continue to operate acceptably during the weekday morning and afternoon peak hours.
14. With the build-out of the Proposed Development, under the future horizon years of 2028 and 2033, the area signalized intersections will continue to operate acceptably during the weekday morning and afternoon peak hours.
15. Analysis results are an improvement over the forecasted 2033 (with improvements) scenario outlined within the Mayfield Road Environmental Assessment, which forecast an overall v/c ratio of 1.39, with multiple individual movements above 1.0.
16. Queuing analysis was undertaken using SimTraffic for all study intersections. Queueing issues for all turning movements are expected to be minimal. While some 95th percentile queues extend beyond the assumed storage length, they typically do so within the effective taper lengths, allowing passengers to queue without obstructing the through lanes. Critically, all movements operate at v/c ratios below 1.0, confirming that even when queues spill into the taper, they will fully clear within each signal cycle.
17. It is recommended that the traffic signals at the Old School Road / Site Access 3 intersection be installed before the full build-out of the Site to accommodate the vehicular demand and reduce conflicts between vehicles and other modes of travel, accommodate anticipated vehicular delays associated with all future development, and further improve site circulation safety by better regulating access to Dixie Road to and from the Site.

Transportation Demand Management

18. A Transportation Demand Management (TDM) Plan has been prepared which strives to reduce automobile use.
19. Recommended TDM measures include the following:
 - Encourage tenant to create and promote an internal carpool program;
 - Encourage tenant to create Emergency Ride Home program;
 - Encourage tenant to create carpool promotional campaigns;
 - Building management to provide transit information packages;
 - Provide pedestrian connections to sidewalks;
 - Signalization of one intersection to improve pedestrian and cycling safety and operations;
 - Provide pedestrian connections to the surrounding road network;
 - Maintain on-site pedestrian facilities year-round; and
 - Enhance public realm through provision of pedestrian scale landscaping.

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 9.5 (8%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green

Natural Cycle: 105

Control Type: Actuated-Coordinated

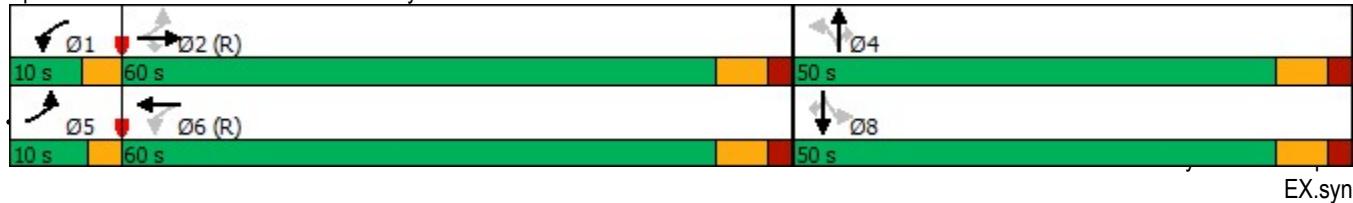

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Dixie Road & Mayfield Road

HCM Signalized Intersection Capacity Analysis

Intersection Summary

Cycle Length: 135

Actuated Cycle Length: 135

Offset: 0 (0%), Referenced to phase 2:EBT and 6:WBTL, Start of Green

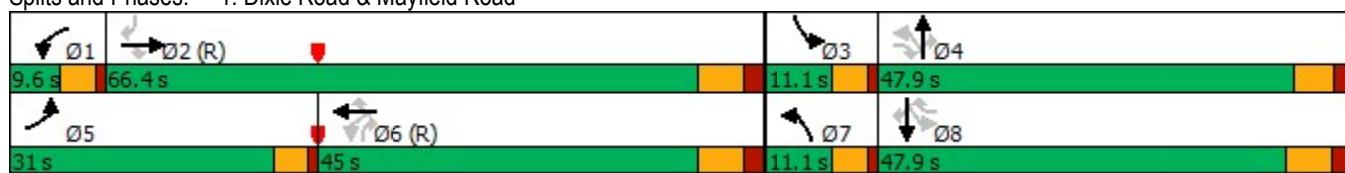

Natural Cycle: 145

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Dixie Road & Mayfield Road

HCM Signalized Intersection Capacity Analysis

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

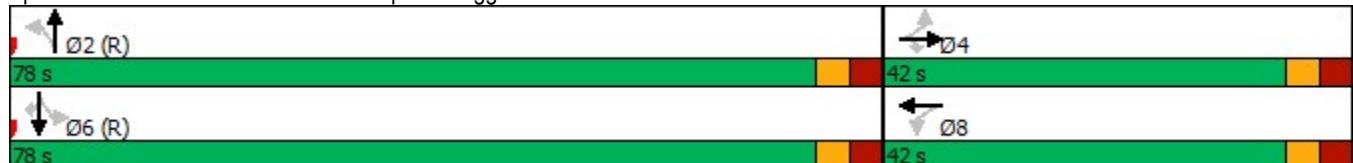

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 150

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 10: Dixie Road & 12892 Site Access 2/12489 Site Access 2
