Letter Supporting the Natural Sciences Technical Details for the Proposed Caledon Pit/Quarry

Dear David Hanratty

At the request of CBM Aggregates (CBM), GHD previously completed an independent peer-review of the technical background documents describing the natural environment conditions near the proposed CBM Caledon Pit/Quarry, which consists of approximately 262 hectares legally described as Part of Lots 15-18, Concession 4 WSCR and Part of Lot 16, Concession 3 WSCR (former Geographic Township of Caledon). In addition to the 262 hectares of land for which CBM has applied to the Ministry of Natural Resources and Forestry (MNRF) for a Class A licence (Pit and Quarry Below Water) (the Application), CBM also owns/controls approximately 61 hectares of adjoining property that is not included in the Class A licence application. Closing GHD's Natural Environment technical review included a review of Golder (2022)¹. To support the technical review, GHD undertook a Site visit on April 19, 2022. GHD timed the Site visit to coincide with peak season surface flow rates associated with the spring freshet.

Based on GHD's independent peer review of these documents and the Site visit, GHD is supportive of the Application.
