Acknowledgements

We respectfully acknowledge that the Study Area is located in the traditional territory of multiple Indigenous groups, including the Mississaugas of the Credit First Nation, Six Nations of the Grand River (the Haudenosaunee), the Huron-Wendat Nation, and the Métis Nation of Ontario.

Executive Summary

The Executive Summary highlights key points from the report only; for complete information and findings, as well as the limitations, the reader should examine the complete report.

Golder Associates Ltd. (Golder), now WSP Canada Inc. (WSP), was retained by CBM Aggregates, a division of St Marys Cement Inc. (Canada), to conduct a Stage 3 Archaeological Assessment (AA) of Location 15 (AlHa-52), a historical Euro-Canadian site located within the license boundary for the proposed Caledon Pit/Quarry (the Study Area; Map 1). The Stage 3 AA was conducted to meet the requirements of the *Aggregate Resources Act* R.S.O. 1990, c.A.8. (Government of Ontario 1990a), and the Town of Caledon Official Plan and Zoning By-law Amendment under the *Planning Act*, R.S.O 1990, c.P.14 (Government of Ontario 1990b).

Golder previously completed a Stage 1 and 2 AA of the Study Area for the proposed Caledon Pit/Quarry under Project Information Number (PIF) P364-0164-2020 (Golder 2022). The area assessed is 261.2 hectares (ha) located within part of Lots 15 to 17, Concession 4 West of Centre Road (WSCR), as well as part of Lot 16, Concession 3 WSCR, in the former geographic Township of Caledon, former County of Peel, now the Town of Caledon, Regional Municipality of Peel (Peel Region) (Map 1). It consists predominately of cultivated fields in addition to uncultivated farmland (i.e., pastures), farmstead/residential areas, and wooded areas.

The Stage 1 and 2 AA resulted in the identification of 29 new archaeological sites (Locations 1 through 29) (Golder 2022) and re-established the location of the Cameron Site (AlHa-9), which was previously identified in 2001 (Archaeological Assessments Ltd. 2001). Of the 30 archaeological sites within the Study Area, a total of 14 were considered to have further cultural heritage value or interest (CHVI) and Stage 3 AA was recommended.

Location 15 (AlHa-52) is one of the 14 sites that was recommended for Stage 3 AA. It is a historical Euro-Canadian site that was identified during the Stage 2 pedestrian survey of an agricultural field located over an area measuring approximately 50 m north-south by 45 m east-west within part of Lot 16, Concession 3 WSCR (Supplementary Documentation; Map SD1).

The Stage 3 AA of Location 15 (AlHa-52) consisted of the hand excavation of 67 test units across an area measuring approximately 45 m north-south by 50 m east-west. The Stage 3 excavations resulted in the recovery of 4,323 historical Euro-Canadian artifacts and 92 faunal elements, as well as the identification of four subsurface cultural features (Map 6).

Location 15 (Alha-52) is interpreted to be a domestic refuse site associated with the Coulter family's mid- to late 19th century occupation of Lot 16, Concession 4 WSCR. Most of the artifacts recovered from Location 15 (AlHa-52) are food and beverage-related (n=2,195, 50% of the total assemblage) or structural (n=1,445, 33% of the total assemblage). Of the dateable assemblage (n=2,435), 74.5% consists of artifacts that generally date to the mid-19th century. Given that the artifact assemblage at Location 15 (AlHa-52) contains a comparable number of structural artifacts to food/ beverage related artifacts, the site may be associated with a domestic deposit that is related to a former structure. This interpretation is further supported by the identification a partially revealed stone foundation (Feature 3) which may represent a farmhouse illustrated on Pope's 1877 historical atlas map (Map 3).

The results of the Stage 3 AA of Location 15 (AlHa-52) revealed that 75.4% of the site's occupation dates to before 1870. As such, the site does not meet Standards 2c of Section 3.4 of the *Draft 19th Century Rural Historical Farmstead Sites: Standards for Consultant Archaeologists* (Government of Ontario 2021), or Standard 1a of Section 3.4.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for domestic archaeological sites dating after 1830. However, the identification of historical structural remains which

may represent a structure built prior to 1870, in combination with a discrete 19th century artifact assemblage, indicates that the site has further CHVI. As such, Location 15 (AlHa-25) has further cultural heritage value or interest (CHVI) and Stage 4 mitigation is required prior to impacts.

Given the findings and conclusions of the Stage 3 AA of Location 15 (AlHa-52), the following recommendations are provided:

- Location 15 (AlHa-52) possesses CHVI and should be subject to Stage 4 mitigation prior to any impacts.
 Through discussions with the proponent, it has been determined that Location 15 (AlHa-52) cannot be avoided, and, as such, the site should be mitigated through Stage 4 excavation.
- 2) As Location 15 (AlHa-52) dates to post-1830 and does not meet the exceptions outlined in Standard 3, Section 4, of the *Draft 19th Century Rural Historical Farmstead Sites: Standards for Consultant Archaeologists* (Draft RHF Standards) (Government of Ontario 2021), the site does not require hand excavation of the ploughzone or surface layers.
- The Stage 4 mitigation of Location 15 (AlHa-52) should entail mechanical topsoil removal, as per Standard 2, 3) Section 4 of the Draft RHF Standards (Government of Ontario 2021). According to the Draft RHF Standards (Government of Ontario 2021) and 2011 Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011), the mechanical topsoil removal of the site should follow Standards 2-6 outlined in Section 4.2.3, as well as Standards 3-5 in Section 4.2.7. Mechanical topsoil removal should only be done with a flat-edged bucket on machinery that pulls soil away and should stop at or above the topsoil/subsoil interface. If mechanical soil removal is thought to be affecting the integrity of cultural features or the recovery of surface artifacts, it should be halted, and hand excavation resumed. Mechanical topsoil removal should extend 10 m beyond any uncovered features and cover the extent of the site within the Study Area as determined by the Stage 3 assessment. All exposed areas should be shovel shined and examined for cultural features following mechanical topsoil removal. If cultural features are identified they must be completely exposed, photographed, mapped and stratigraphically excavated by hand with all artifacts bagged and tagged by context as per Section 4.2.2, Standard 7 (Government of Ontario 2011). If required, soil samples should be taken as per Section 4.4 of the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011).
- 4) Until such time that Location 15 (AlHa-52) can undergo the recommended Stage 4 excavation, the site should be avoided and protected by establishing a "no-go" zone consisting of the site and a 10 m protective buffer determined by the results of the Stage 3 AA (Map 6). As part of the implementation of the avoidance and protection strategy, post and wire fence must be erected at the limits of the "no-go" zone for Location 15 (AlHa-52). The proposed protected area must be shown on all site plans and be labeled as a "no-go" zone. Instructions should be provided to all on-site personnel to stay outside of this area. Any ground alterations to Location 15 (AlHa-52) and its protective buffer area should be avoided. This includes but is not necessarily limited to impacts from aggregate extraction, aggregate processing, vegetation clearance, and the construction of access roads or berms over the site. It also includes minor forms of soil disturbance, such as tree removal, minor landscaping, and utilities installation.

If grading or other soil disturbing activities are anticipated to extend to the edge of the area to be avoided, nogo instructions must be given to all on-site extraction crew and others involved in on-site day-to-day decisions, and a licensed archaeologist should be contracted to inspect and monitor the effectiveness of the avoidance strategy. After completion of these activities, a report will be prepared on the effectiveness of the strategy and submitted to the MCM for review.

Based on the proceeding recommendations and the Aggregates Resource Act site plans submitted to the MNRF by CBM, the following conditions will apply to Location 15 (AlHa-52):

- Stage 4 mitigation is required for Location 15 (AlHa-52) as the site has further cultural heritage value or interest.
- a) The Archaeological Protection Area for Location 15 (AlHa-52) will consist of the limits of the archaeological site, determined by the Stage 3 AA, plus a 10 m protective buffer zone.
- b) The temporarily protected site must be fenced (post and wire) prior to commencing extraction.
- c) Alterations and/or ground disturbing activities are prohibited within the limits of the Archaeological Protection Area for Location 15 (AlHa-52) until such time that a professionally licensed archaeologist has completed archaeological fieldwork on the site and the MCM has entered a report(s) in the Ontario Public Register of Archaeological Reports where the report(s) recommends that the archaeological site is of no further cultural heritage value or interest.
- d) If the licence is surrendered, a covenant will be registered against title for the block containing the protected archaeological site.

The MCM is asked to review the results and recommendations presented herein, accept this report into the Provincial Register of archaeological reports and issue a standard letter of compliance with the Ministry's 2011 Standards and Guidelines for Consultant Archaeologists and the terms and conditions for archaeological licencing.

Study Limitations

WSP has prepared this report in a manner consistent with that level of care and skill ordinarily exercised by members of the archaeological profession currently practicing under similar conditions in the jurisdiction in which the services are provided, subject to the time limits and physical constraints applicable to this report. No other warranty expressed or implied is made.

This report has been prepared for the specific site, design objective, developments, and purpose described to WSP by CBM Aggregates, a division of St. Marys Cement Inc. (the Client). The factual data, interpretations, and recommendations pertain to a specific project as described in this report and are not applicable to any other project or site location.

The information, recommendations, and opinions expressed in this report are for the sole benefit of the Client. No other party may use or rely on this report or any portion thereof without WSP's express written consent. If the report was prepared to be included for a specific permit application process, then upon the reasonable request of the Client, WSP may authorize in writing the use of this report by the regulatory agency as an Approved User for the specific and identified purpose of the applicable permit review process. Any other use of this report by others is prohibited and is without responsibility to WSP. The report, all plans, data, drawings, and other documents as well as electronic media prepared by WSP are considered its professional work product and shall remain the copyright property of WSP, who authorizes only the Client and Approved Users to make copies of the report, but only in such quantities as are reasonably necessary for the use of the report by those parties. The Client and Approved Users may not give, lend, sell, or otherwise make available the report or any portion thereof to any other party without the express written permission of WSP. The Client acknowledges that electronic media is susceptible to unauthorized modification, deterioration, and incompatibility and therefore the Client cannot rely upon the electronic media versions of WSP's report or other work products.

Unless otherwise stated, the suggestions, recommendations, and opinions given in this report are intended only for the guidance of the Client in the design of the specific project.

Special risks occur whenever archaeological investigations are applied to identify subsurface conditions and even a comprehensive investigation, sampling and testing program may fail to detect all or certain archaeological resources. The sampling strategies incorporated in this study, if any, comply with those identified in the Ministry of Citizenship and Multiculturalism 2011 *Standards and Guidelines for Consultant Archaeologists*.

1.0 PROJECT CONTEXT

1.1 Development Context

Golder Associates Ltd. (Golder), now WSP Canada Inc. (WSP), was retained by CBM Aggregates, a division of St Marys Cement Inc. (Canada), to conduct a Stage 3 Archaeological Assessment (AA) of Location 15 (AlHa-52), a historical Euro-Canadian site located within the license boundary for the proposed Caledon Pit/Quarry (the Study Area; Map 1). The Stage 3 AA was conducted to meet the requirements of the *Aggregate Resources Act* R.S.O. 1990, c.A.8. (Government of Ontario 1990a), and the Town of Caledon Official Plan and Zoning By-law Amendment under the *Planning Act*, R.S.O 1990, c.P.14 (Government of Ontario 1990b).

Golder previously completed a Stage 1 and 2 AA of the Study Area for the proposed Caledon Pit/Quarry under Project Information Number (PIF) P364-0164-2020 (Golder 2022). The area assessed is 261.2 hectares (ha) located within part of Lots 15 to 17, Concession 4 West of Centre Road (WSCR), as well as part of Lot 16, Concession 3 WSCR, in the former geographic Township of Caledon, former County of Peel, now the Town of Caledon, Regional Municipality of Peel (Peel Region) (Map 1). It consists predominately of cultivated fields in addition to uncultivated farmland (i.e., pastures), farmstead/residential areas, and wooded areas.

The Stage 1 and 2 AA resulted in the identification of 29 new archaeological sites (Locations 1 through 29) (Golder 2022) and re-established the location of the Cameron Site (AlHa-9), which was previously identified in 2001 (Archaeological Assessments Ltd. 2001). Of the 30 archaeological sites within the Study Area, a total of 14 were considered to have further cultural heritage value or interest (CHVI) and Stage 3 AA was recommended.

Location 15 (AlHa-52) is one of the 14 sites that was recommended for Stage 3 AA. It is a historical Euro-Canadian site that was identified during the Stage 2 pedestrian survey of an agricultural field located over an area measuring approximately 50 m north-south by 45 m east-west within part of Lot 16, Concession 3 WSCR (Supplementary Documentation; Map SD1).

The Stage 3 AA was conducted under professional license P364, issued to Michael Teal of WSP by the MCM (PIF P364-0208-2022). All activities undertaken during the assessment followed the *Ontario Heritage Act* and the MCM's (2011) *Standards and Guidelines for Consultant Archaeologists*. All fieldwork occurred between October 17 and November 29, 2022. Permission to access the Study Area to conduct all required archaeological fieldwork activities, including the recovery of artifacts, was provided by CBM Aggregates.

1.2 Objectives

The Stage 3 AA was completed with the following objectives:

- To determine the extent of the archaeological site and the characteristics of the artifacts.
- To collect a representative sample of artifacts.
- To assess the cultural heritage value or interest of the archaeological site.
- To determine the need for mitigation of development impacts and recommend appropriate strategies for mitigation and future conservation.

2.0 HISTORICAL CONTEXT

The following historical narrative is intended to provide a general overview of the interpreted land use during the "Pre-Contact Period" and "Early Contact Period" within the vicinity of the current study area. This historical overview is primarily based on archaeological and historical interpretations inferred over the past 50 years, and generally reflect inferences and interpretations made by non-Indigenous representatives.

The text below is not intended to provide a comprehensive historical overview of the landscape prior to, and following the arrival of Europeans to Ontario, but rather provide a general overview context that can be referenced when determining the potential for archaeological resources within the current project study area.

The text and comments below, including the cited references, may reflect archaeological and contemporary literature within general publications, but may not represent the opinions of those Indigenous communities whose history it is purported to reflect.

2.1 Pre-Contact Indigenous Period

The general culture history of southern Ontario based on Ellis and Ferris (1990) is summarised in Table 1, while Map 2 displays the pre-contact Indigenous culture history of southern Ontario.

Table 1: Overview of cultural chronology of southern Ontario.

Period		Time Period (circa)	Characteristics	
Paleo	Early	9000 - 8400 BC	Gainey, Barnes, and Crowfield traditions; small bands; mobile hunters and gatherers and large territories; fluted projectiles.	
raieu	Late	8400 - 8000 BC	Holcomb, hi-Lo and Lanceolate biface traditions; continuing mobility; campsite/way-station sites; smaller territories are utilized; non-fluted projectiles.	
	Early	8000 - 6000 BC	Side-notched, Corner-notched (e.g., Nettling, Thebes) and Bifurcate Base traditions; growing diversity of stone tool types; heavy woodworking tools appear (e.g., ground stone axes and chisels).	
Archaic	Middle	6000 - 2500 BC	Stemmed (e.g., Kirk, Stanley/Neville), Brewerton side- and corner-notched traditions; reliance on local resources; populations increasing; more ritual activities; fully ground and polished tools; net-sinkers common; earliest copper tools.	
	Late	2000 - 950 BC	Narrow Point (e.g., Lamoka), Broad Point (e.g., Genesee), and Small Point (e.g., Crawford Knoll) traditions: less mobility; use of fish-weirs; more formal cemeteries appear; stone pipes emerge; long-distance trade (marine shells and galena).	

Period		Time Period (circa)	Characteristics
	Early	950 - 400 BC	Meadowood tradition; cord-roughened ceramics emerge; Meadowood cache blades and side-notched points; Bands of up to 35 people.
	Middle	400 BC - AD 500	Saugeen tradition; stamped ceramics appear; Saugeen projectile points; cobble spall scrapers; seasonal settlements and resource utilization; post holes, hearths, middens, cemeteries, and rectangular structures identified.
Woodland	Transitional	AD 550 - 900	Princess Point tradition; cord roughening, impressed lines, and punctate designs on pottery; adoption of maize horticulture at the western end of Lake Ontario; oval houses and 'incipient' longhouses; first palisades; villages with 75 people.
	early Late Woodland	AD 900 - 1300	Glen Meyer tradition; settled village-life based on agriculture; small villages (0.4 ha) with 75-200 people and 4-5 longhouses; semi-permanent settlements.
	middle Late Woodland AD 1300 - 1400		Uren and Middleport traditions; classic longhouses emerge; larger villages (1.2 ha) with up to 600 people; more permanent settlements (30 years).
	late Late Woodland	AD 1400 - 1600	Pre-contact Iroquoian tradition; larger villages (1.7 ha); examples up to 5 ha with 2,500 people; extensive croplands; also, hamlets, cabins, camps, and cemeteries; potential tribal units; fur trade begins ca. 1580; European trade goods appear.

Research and previous archaeological assessments have demonstrated that the area around the Town of Caledon was intensively occupied by pre-contact Indigenous communities from the Paleo period up to the time of contact. The following subsections outline the cultural or temporal periods recognized for southern Ontario more generally.

2.1.1 Paleo Period

The Paleo Period represents a temporal classification developed by archaeologists and does not reflect any inferences of initial human habitation. Based on archaeological investigations, the first human occupation of southern Ontario begins just after the end of the Wisconsin Glacial Period. Although there were a complex series of ice retreats and advances which played a large role in shaping the local topography, southern Ontario was ice free by approximately 12,500 years ago.

The archaeological record has documented human settlement at 11,000 years ago, when the area was settled by Indigenous groups who had been living south of the Great Lakes. The period of these early inhabitants is known as the Paleo Period (Ellis and Deller 1990). The Paleo Period in Ontario is broadly characterized by many small groups of hunter-gatherers whose subsistence strategies followed a pattern of seasonal mobility over large areas, often travelling distances in excess of 150 km in an effort to procure raw materials for the production of lithic tools and the hunting of contemporary animals along migratory routes including caribou as well as mammoth and mastodon. For example, groups in southern Ontario appear to have followed a seasonal round that extended from as far south as Chatham to the Horseshoe Valley north of Barrie.

The research suggests that population densities were very low during the Early Paleo Period, and, as such, archaeological examples of sites from this time are rare (Ellis and Deller 1990:54). The current understanding of Early Paleo locality is that sites tend to be situated in elevated topography on well-drained loamy soils with many of the known sites located on former beach ridges associated with glacial lakes. Many of the archaeologically investigated Paleo sites are relatively small in size compared to later periods and typically represent contemporary camp sites; however, there are large sites, such as the Parkhill and Fisher sites, identified as extending over several hectares. It is likely these larger sites were formed as people continued to occupy the same area for short durations over the course of several years. Given the placement of many sites on elevated locations, it has been suggested that they may represent communal hunting camps as they would likely have been advantageous to observe and intercept migratory mammals such as caribou (Ellis and Deller 1997). Other sites, such as smaller Early Paleo camps, were situated throughout the interior of Ontario and were typically situated adjacent to wetlands.

Paleo Period sites are commonly recognized by the presence of distinctive, finely-crafted lance points. Knives, gravers, scrapers and a variety of other stone processing tools are also typically associated with Paleo Period sites (MCR 1981). Diagnostic signatures of Early Paleo Period populations include the production of projectile points with channel flakes or flutes predominately manufactured from Collingwood or Onondaga chert. Paleo Period fluted points may be a reflection of large game hunting, while tools such as scrapers, piercing implements and gravers that are typically associated with Paleo Period sites may have been used in the manufacture and repair of wooden implements, bone tools and clothing (Peers 1985).

By the Late Paleo Period (8400-8000 BC), enclosed coniferous forests with some minor deciduous elements became established in southern Ontario. It is likely that many of the large game species that had been hunted during the early epoch of the Paleo Period had either moved further north, or as in the case of the mastodons and mammoths, became extinct. Similar to the inhabitants during the Early Paleo Period, Late Paleo Period populations traversed large territories in response to seasonal resource fluctuations. The transition to the Late Paleo Period also included projectile points comprised of smaller unfluted projectiles along with lanceolate parallel flaked stemmed and non-stemmed Plano points, while hunting strategies may have transitioned from communal groups to more individualized pursuits (Ellis and Deller 1997).

2.1.2 Archaic Period

During the Early Archaic Period (8000-6000 BC), a gradual increase in atmospheric humidity in conjunction with warmer summers influenced the environmental landscape. Fossil pollen and spore identification from sedimentation cores lifted from Lovesick Lake provide evidence of climate change, with jack pine forests becoming dominant during the beginning of the Early Archaic Period (Teichroeb 2007).

Concurrent with the environmental evolution during the Early Archaic Period were notable diagnostic technological changes including the appearance of side and corner-notched projectile points. Other significant innovations included the introduction of ground stone tools such as celts and axes, which may reflect an emerging woodworking industry.

Populations in Ontario during this period primarily utilized maritime landscapes during the spring, summer and fall seasons with large base camps on islands, near river mouths, and on the shores of embayment's where a variety of flora, fish, and wild fowl resources could be obtained. Smaller hunting and specialized campsites were also established in the uplands and along smaller watercourses.

During the Middle Archaic Period (6000 – 2000 BC) the environmental landscape continued to evolve with the jack pine forests prevalent during the Early Archaic Period being primarily replaced by white pine growth, suggesting a gradual increase in humidity and a continuation of hot summers (Teichroeb 2007).

The trend towards more diverse toolkits also continued into the Middle Archaic Period, as the presence of net-sinkers and fish weirs indicate that fishing was an important component of the subsistence strategy. Net-sinkers were typically used with both gill nets and seine nets, which were employed for both shoreline and offshore fishing activities. Gill nets were kept vertical with stone sinkers on the bottom and floats on the top and were often anchored to a specific location with the use of larger stones. Seine nets acted as fences and were used to corral and hold the fish and needed to be kept tight to the bottom of the water by attaching many closely spaced sinkers to the bottom of the net with floats attached to the top (Ingleman *et al* 2012; Prowse 2003). Many contemporary fishing nets were commonly made from hemp or nettle (Needs-Howarth 1999) and are rarely preserved in the archaeological record (Ingleman *et al* 2012).

The Middle Archaic also marks when bannerstones were first manufactured. Bannerstones are carefully crafted ground stone devices that served as a counterbalance for atlatls or spear-throwers. Another characteristic of the Middle Archaic is an increased reliance on local, sometimes lower-quality chert resources for the manufacturing of projectile points. During earlier periods, groups likely occupied large territories which may have increased access to a primary outcrop of high-quality chert during their seasonal round. However, during the Middle Archaic, groups who inhabited smaller territories may only have had access to lower quality materials which had been deposited by the glaciers in the local till and river gravels.

It was during the latter part of the Middle Archaic Period that long-distance trade routes began to develop, spanning the northeastern part of the continent. In particular, copper tools manufactured from a source located northwest of Lake Superior were being traded (Ellis, Kenyon and Spence 1990), with a wide range of copper tools such as socketed and tanged spear points, projectile points, harpoons, crescent knives, gouges, pikes and celts being produced during this period (Dawson 1983).

Trade networks established during the Middle Archaic Period also continued to flourish during the Late Archaic Period (2500-950 BC). Copper implements from northern Ontario and marine shell artifacts from the Mid-Atlantic coast have been frequently encountered in burial contexts (Ellis, Kenyon and Spence 1990; Ellis, Timmins and Martelle 2009).

During the Late Archaic the trend towards decreased territory size and a broadening subsistence base continued. In the archeological record, Late Archaic sites are more numerous than Early or Middle Archaic sites suggesting that populations were increasing. Regionalized variations during the Late Archaic Period are also reflected in projectile point manufacturing, with distinct locally diagnostic styles appearing. Other artifacts including polished stone pipes and banded slate gorgets also appear on Late Archaic Period sites, as well as "birdstones", which are small, bird-like effigies usually manufactured from green banded slate (Ellis, Kenyon and Spence 1990).

It is during the Late Archaic Period that defined cemeteries are identified. The appearance of burial pits during the Late Archaic Period has been interpreted as a possible response to increased population densities and competition between local groups for access to resources. It has been theorized that cemeteries and burial grounds may have provided strong symbolic claims over a local territory and the surrounding resources and are often located within areas of elevated topography containing well-drained sandy and gravel soils adjacent to major watercourses. Burial sites reflect the importance of the landscape to Indigenous populations as they represent locations along travel routes that would be returned to, where feasts would occur, and the dead could be honoured (Taylor 2015).

2.1.3 Woodland Period

The Early Woodland Period (940 to 400 BC) is distinguished archaeologically from the Late Archaic Period primarily by the introduction of ceramic technology. The first pots were thick walled and friable, suggesting they may have primarily been used in the processing of nut oils by boiling crushed nut fragments in water and skimming off the oil (Spence, Pihl and Murphy 1990). These early vessels were not easily portable, and their fragile nature suggests they may have required regular replacement. There have also been numerous Early Woodland Period sites identified where ceramics were absent from the recovered assemblage, suggesting ceramic vessels may have not been completely integrated within the daily lives of Early Woodland Period populations.

Besides the addition of ceramic technology, the cultural affinity of Early Woodland Period inhabitants shows a great deal of continuity with the preceding Late Archaic Period. For instance, birdstones continued to be manufactured, although the Early Woodland Period varieties have "pop-eyes" that protrude from the sides of their heads (Spence, Pihl and Murphy 1990). Another example of general continuity from the terminal segment of the Archaic Period is represented by the thin, well-made projectile points, although the Early Woodland Period variants were side-notched rather than corner-notched, giving them a slightly altered and distinctive appearance (Spence, Pihl and Murphy 1990).

Evidence of exchange networks during the early stages of the Woodland Period indicate numerous reciprocal, down-the-line exchanges between trade partners located both short and long distances away. There is a gradual intensification of these types of trade throughout the period continuing into, and reaching its apex in, the Middle and Late Woodland Periods (Hartmann 1996). During the last 200 years of the Early Woodland Period, projectile points manufactured from high quality raw materials from the American Midwest begin to appear on sites in southwestern Ontario.

The Middle Woodland Period (300 BC to 500 AD) reflects an evolving transition from patterns observed from archaeological excavations documenting Archaic and Early Woodland Period sites. Middle Woodland peoples relied much more extensively on ceramic technology where vessels are often heavily decorated with impressed designs covering the entire exterior surface and upper portion of the vessel interior. Consequently, even very small fragments of Middle Woodland vessels are easily identifiable.

While Middle Woodland Period populations still relied on hunting and gathering to meet their subsistence requirements, an increased consumption of fish became an important dietary component. Some Middle Woodland Period sites have produced literally thousands of bones from spring spawning species including walleye and sucker (MCR 1981). Food sources such as shellfish, tree nuts and a proliferation of plant greens and seeds were also utilized during the Middle Woodland Period. The seasonal variety and relative dependability of these food sources encouraged population growth in many areas.

It is at the beginning of the Middle Woodland Period that rich, densely occupied sites appear along the margins of major rivers and lakes. While these areas had been utilized by earlier peoples, Middle Woodland sites are significantly different in that the same location was occupied off and on for as long as several hundred years and large deposits of artifacts often accumulated. The land use patterns reflected from archaeological investigations of Middle Woodland Period sites generally reflect densely occupied locations that appear on the valley floor of major rivers, often producing sites with significant artifact deposits. Unlike earlier seasonally utilized locations, many Middle Woodland Period sites appear to have functioned as base camps, occupied periodically over the course of the year and situated to take advantage of the greatest number of resources. There are also numerous small upland Middle Woodland Period sites, many of which can be interpreted as special purpose camps where localized natural resources were utilized (MCR 1981).

The Late Woodland Period began with a shift in settlement and subsistence patterns involving an increasing reliance on corn horticulture (Fox 1990:185; Smith 1990; Williamson 1990:312). Corn may have been introduced into southwestern Ontario from the American Midwest as early as AD 600 or a few centuries before. However, corn did not become a dietary stapleuntil at least three to four hundred years later, and then the cultivation of corn gradually spread into south-central and southeastern Ontario.

During the early Late Woodland, particularly within the Princess Point Complex (circa AD 500-1050), a number of archaeological material changes have been noted: the appearance of triangular projectile point styles, first seen during this period begin with the Levanna form; cord-wrapped stick decorated ceramics using the paddle and anvil forming technique replace the mainly coil-manufactured and dentate stamped and pseudo-scallop shell impressed ceramics; and if not appearance, increasing use of maize (Zea mays) as a food source (Bursey 1995; Crawford et al. 1997; Ferris and Spence 1995:103; Martin 2004 [2007]; Ritchie 1971:31-32; Spence et al. 1990; Williamson 1990:299). Aside from projectile points, Princess Point Complex assemblages are predominantly characterized by informal or expedient flake tools and ground stone and bone artifacts are rare (Ferris and Spence 1995:103; Shen 2000).

The Late Woodland Period is considered to coincide with the beginning of agricultural life ways in southern Ontario. Researchers have suggested that a warming trend during this time may have encouraged the spread of maize into this part of the province, providing a greater number of frost-free days (Stothers and Yarnell 1977). Further, shifts in the location of sites have also been identified with an emphasis on riverine, lacustrine and wetland occupations set against a more diffuse use of the landscape during the Middle Woodland (Dieterman 2001). These locations may have provided nutrient-rich soil for agriculture, while growing sedentism is seen as a departure from Middle Woodland hunting and gathering and may reflect growing investment in the care of garden plots of maize (Smith 1997:15).

The first agricultural villages documented in the archaeological record in southern Ontario have been dated to the 10th century. Unlike the riverine base camps of the Middle Woodland Period, these sites are located in upland locations on well-drained sandy soils. Identified archaeologically as "Early Late Woodland" (AD 900-1300), it is suggested that these early populations were ancestral to the Iroquoian groups which later inhabited southern Ontario at the time of first European contact.

Village sites dating between AD 900 and 1300 share many attributes with the historically investigated Iroquoian sites, including the presence of longhouses and sometimes palisades. These early longhouses averaged 12.4 m in length (Dodd et al. 1990:349; Williamson 1990:304-305). It is also quite common to find the outlines of overlapping house structures, suggesting that these villages were occupied long enough to necessitate rebuilding. The Jesuits reported that the Huron moved their villages once every 10-15 years, when the nearby soils had been depleted by farming and conveniently collected firewood grew scarce (Pearce 2018). It seems likely that Early Late Woodland peoples lived in villages for considerably longer, as they relied less heavily on corn than did later groups, and their villages were much smaller, placing less demand on nearby resources.

Judging by the presence of carbonized corn kernels and cob fragments recovered from sub-floor storage pits, agriculture was becoming a vital part of the early Late Woodland economy. However, it had not reached the level of importance it would during the middle Late and late Late Woodland Periods. There is ample evidence to suggest that more traditional resources continued to be utilized and comprised a large part of the subsistence economy. Seasonally occupied special purpose sites relating to deer procurement, nut collection, and fishing activities, have all been identified. While beans are known to have been cultivated later in the Late Woodland Period, they have yet to be identified on early Late Woodland sites.

The middle Late Woodland Period (AD 1300-1400) witnessed several interesting developments in terms of settlement patterns and artifact assemblages. Changes in ceramic styles have been carefully documented, allowing the placement of sites in the first or second half of this 100-year period. Moreover, villages, which averaged approximately 0.6 hectares in extent during the early Late Woodland, now consistently range between one and two hectares.

House lengths also change dramatically, more than doubling to an average of 30 m, while houses of up to 45 m have been documented. This increase in longhouse length has been variously interpreted. The simplest possibility is that increased house length is the result of a gradual, natural increase in population (Dodd et al. 1990:323, 350, 357; Smith 1990). However, this does not account for the sudden shift in longhouse lengths around AD 1300. Other possible explanations involve changes in economic and socio-political organization (Dodd et al. 1990:357). One suggestion is that during the middle Late Woodland Period small villages were amalgamating to form larger communities for mutual defense (Dodd et al. 1990:357). If this was the case, the more successful military leaders may have been able to absorb some of the smaller family groups into their households, thereby requiring longer structures. This hypothesis draws support from the fact that some sites had up to seven rows of palisades, indicating at least an occasional need for strong defensive measures. There are, however, other middle Late Woodland villages which had no palisades present (Dodd et al. 1990). More research is required to evaluate these competing interpretations.

The lay-out of houses within villages also changes dramatically by AD 1300. During the early Late Woodland Period villages were planned with houses oriented in various directions. During the middle Late Woodland Period villages are organized into two or more discrete groups of tightly spaced, parallel aligned, longhouses. It has been suggested that this change in village organization may indicate the initial development of the clans which were a characteristic of the historically known Iroquoian peoples (Dodd et al. 1990:358).

Initially at least, the Late Woodland Period (AD 1400-1650) continues many of the trends which have been documented for the proceeding century. For instance, between AD 1400 and 1450 house lengths continue to grow, reaching an average length of 62 m. One longhouse excavated on a site southwest of Kitchener was an incredible 123 m (Lennox and Fitzgerald 1990:444-445). After AD 1450, house lengths begin to decrease, with houses dating between AD 1500 and 1580 averaging 30 m in length.

As to why house lengths decrease after AD 1450 is still being investigated, though it is understood that the shorter houses witnessed on Historical Period sites can be at least partially attributed to the population reductions associated with the introduction of European diseases such as smallpox (Lennox and Fitzgerald 1990:405, 410).

Village size also continues to expand throughout the Late Woodland Period, with many of the larger villages showing signs of periodic expansions. The middle Late Woodland Period and the first century of the late Late Woodland Period was a time of village amalgamation. One large village situated just north of Toronto has been shown to have expanded on no fewer than five occasions. These large villages were often heavily defended with numerous rows of wooden palisades, suggesting that defence may have been one of the rationales for smaller groups banding together. A pattern of Late Woodland village expansion has been clearly documented at several sites throughout southwestern and south-central Ontario (Anderson 2009).

Not all First Nations within southern Ontario resided within villages during the Late Woodland Period, as some communities continued to live in areas along waterways during the summer months and inland hunting sites during the winter.

Early contact with European settlers at the end of the Late Woodland Period resulted in changes to the traditional lifestyles of most Indigenous populations inhabiting Ontario including settlement size, population distribution, and material culture. The introduction of European-borne diseases significantly increased mortality rates, resulting in a drastic decrease in population size (Warrick 2000).

2.2 Post-Contact Indigenous Occupation of Southern Ontario

The post-contact Indigenous occupation of southern Ontario was heavily influenced by the dispersal of various Iroquoian-speaking peoples by the nations of the Haudenosaunee Confederacy, and the subsequent arrival of Algonkian-speaking groups from northern Ontario at the end of the 17th century and beginning of the 18th century (Schmalz 1991).

Following the introduction of Europeans to North America, the nature of Indigenous settlement size, population distribution, and material culture shifted as settlers began to colonize the land. Despite this shift, "written accounts of material life and livelihood, the correlation of historically recovered villages to their archaeological manifestations, and the similarities of those sites to more ancient sites have revealed an antiquity to documented cultural expressions that confirms a deep historical continuity to Indigenous systems of ideology and thought" (Ferris 2009:114). As a result, Indigenous peoples of southern Ontario have left behind archaeologically significant resources that show continuity with past peoples, even if this connection has not been recorded in historical Euro-Canadian documentation.

During the late 1600s and early 1700s, French explorers and missionaries reported a large population of Iroquoian peoples clustered around the western end of Lake Ontario. The part of this area that is now referred to as the Peel Region was known to have been populated by the ancestors of two Late Woodland groups who would become historically referred to as the Neutral (Attawandaron) and Huron nations.

2.3 Historical Euro-Canadian Period

2.3.1 Township of Caledon, County of Peel

The Study Area is located within part of the Mississauga Tract which was ceded to the British by the Mississaugas on the 28th of October 1818, under Treaty 19, for £522 and 10 shillings annually. Treaty 19 was the "Second Purchase" involving the Tract of which the "First Purchase" or "Mississauga Purchase" of 1805 allowed the British Crown to acquire over 74,000 acres of land in southern Peel County. Treaty 19 transferred an additional 648,000 acres of the Tract to the British who in 1819 surveyed the area and divided it into the townships of Toronto, Chinguacousy, Caledon, Albion and Toronto Gore (PAMA 2014).

Albion, Caledon and Chinguacousy Townships began settlement in 1820 with Caledon and Chinguacousy consisting of six concessions on both the east and west sides of Centre Road. According to George Walton's 1842 *Walton's Home District Directory*, the population of Caledon Township that year was 1,920. The 1870s saw the creation of railway lines east of the study area for the Credit Valley Railway (CVR) and Toronto Grey & Bruce Railway (both acquired by the Canadian Pacific Railway [CPR] in 1884). Caledon Township was bound on the east by Albion Township, on the south by Chinguacousy Township, on the west by Erin Township in the County of Wellington, and on the north-west by Garafraxa Township also in the County of Wellington (Lynch 1874).

Events in Europe during the mid-19th century dramatically improved the fortunes for Caledon Township and the surrounding county. A combination of failed harvests and disrupted trade routes caused by the Crimean War suddenly created a market for Canadian wheat producers, then centred in Ontario, to meet global demand. Simultaneously, the 1854 Canadian American Reciprocity Treaty prompted farmers to also take up livestock rearing for export to the United States (Scheinman 2009). Getting these products to consumers was aided by the new railway lines.

At the opening of the 20th century, economic development in Caledon Township, like that of adjacent counties and townships, relied on the prosperity of nearby Toronto and exports to the United States and Britain. Following World War II, the widespread use of motor vehicles brought changes to urban and rural development. As vehicular traffic increased, the network of roadways throughout the region improved, providing Caledon Township and its communities with better connections to the growing metropolis of Toronto.

Significant new growth and development has occurred in Peel County over the past four decades. When it became the Regional Municipality of Peel in 1974, Caledon Township along with Albion Township and the north half of Chinguacousy Township were incorporated into the new Town of Caledon. In that year, there were 334,750 people living in Peel Region and by 2014 the population numbered 1,350,000 (Neill 2015). The 2016 census recorded Peel's population at 1,381,739, of which 66,502 were residents of Caledon.

2.3.2 Study Area Specific History

Though Location 15 (AlHa-52) is located exclusively within Part of Lot 16, Concession 3 WSCR, all lots within the Study Area are initially discussed below to aid in a comprehensive overview of the history of the lands surrounding the site. This is followed by a discussion of Lot 16, Concession 3 WSCR more specifically.

A review of historical county maps, topographic maps, and aerial imagery chart the 19th and 20th century development of the Study Area. The earliest cartographic resource consulted was George Tremaine's 1859 *Tremaine's Map of the County of Peel, Canada West* (Tremaine 1859) (Map 3). This map suggests the alignments for present-day Main Street and Mississauga Road are nearly identical to the original concession roads at that time. The 1859 map also depicts the Credit River east of the Study Area and branches of the Credit River flowing adjacent to the north portion of the Study Area (Map 3).

At the northeastern end of the Study Area, the 1859 map portrays the "Coulter Estate" while near the south end of the Study Area, the village of "Church's Falls" is visible. These appear to be the predecessors of the present-day communities of Coulterville and Cataract, respectively. Furthermore, two structures (likely farmhouses) are illustrated within the Study Area on the 1859 map (Map 3). The northwestern-most farmhouse is illustrated within the property of Duncan Cameron (Lot 17, Concession 4 WSCR) and appears to be situated in the same location as the present-day house at 18667 Mississauga Road. The southernmost farmhouse is illustrated within the property of James Cameron (Lot 16, Concession 4 WSCR) and appears to be situated in the same location as the present-day house at 18501 Mississauga Road.

Nearly two decades later, J.H. Pope's 1877 *Illustrated Historical Atlas of the County of Peel* (Pope 1877) depicts the Lot 16 side road as similar to the present-day alignment for Charleston Sideroad. Furthermore, the Credit River and its branches are portrayed as traversing similar paths to those of 1859 and the Coulterville Estate remains at the northeast end of the Study Area. Notable changes include the renaming of the village of Church's Falls (near the south end of the Study Area) to "Cataract" and the establishment of the CVR along the northeast perimeter of the Study Area (Map 3).

The 1877 map still illustrates the same two farmhouses shown in the 1859 map but also presents orchards adjacent to each structure. In addition to these two farmhouses, five new (or newly illustrated) individual structures are depicted in the Study Area on the 1877 map. The new individual structures include four labeled "residences" (farmhouses) and one "school house" as depicted in the 1877 map (Map 3).

From north to south, the first new farmhouse as well as the schoolhouse are located in Lot 16, Concession 3 WSCR, as part of the Coulter Estate, while the second new farmhouse is located in the east corner of Lot 16, Concession 4 WSCR, still listed as the property of James Cameron and situated near the location of the present-

day house at 1420 Charleston Sideroad. The third new farmhouse also has an accompanying orchard and is located in the northeast half of Lot 15, Concession 4 WSCR, listed as the property of Thomas McNicholl, while the fourth new farmhouse is located in the southwest half of the same lot, listed as part of the Morris Estate and situated in the same location as the present-day foundation remnants at 1055 Charleston Sideroad (Map 3).

Available topographic maps and aerial images document the evolution of the Study Area during the 20th century. The 1937 and 1952 versions of the *Topographic Map, Ontario – Orangeville Sheet* by the Department of National Defence (Ontario Council of University Libraries [OCUL] n.d.) provide a more accurate representation of the waterbodies in the Study Area and suggest that branches of the Credit River flow through the west portion of the Study Area as well as to the east of the Study Area. The 1937 and 1952 maps also suggest that six of the seven farmhouses portrayed within the Study Area in 1877 (or versions of them) were still extant and, furthermore, were accompanied by associated barns and/ or outbuildings (Map 4). While the farmhouse on the former Coulter Estate appears to have been replaced with a structure closer to the Lot 16 side road, the schoolhouse on the former property is still illustrated and appears to be situated in the same location as the present-day house at 1626 Charleston Sideroad, just outside of the current Study Area. Another notable change from the 1877 map is the conversion of the former CVR to the CPR (a transition that occurred in 1884, see Section 1.2.3.1) (Map 4).

A 1954 aerial photograph by the Department of Lands and Forests (McMaster University Library 2023) presents the Study Area as identical to the previous topographic maps and confirms the majority of the Study Area remained rural agricultural land with tracts of woodlots interspersed throughout (Map 5). While the number of outbuildings/ barns have changed for the several farmhouses illustrated in the 1877, 1937 and 1952 maps, the main houses still appear to be extant within the Study Area on the 1973 map. Furthermore, Charleston Sideroad appears to have been modified to its present-day alignment and the CPR line remains visible on the 1973 map (Map 5). Though northern portions of the CPR line were decommissioned by 1996, the Brampton-Orangeville Railway was created in 2000 and has been operating freight traffic and a tour train on the line from Streetsville to Orangeville maintaining the use of the rail corridor near the Study Area to the present-day (Town of Caledon 2009).

2.3.2.1 Lot 16, Concession 3 WSCR

The patent for the 200-acres of Lot 16, Concession 3 WSCR was granted to Elizabeth Vanduson [sic] in March 1822 (Ontario Land Registry, n.d.(d), 273). No archival records were located relating to the Elizabeth and Robert VanDusen family. The VanDusen's sold the western three-quarters of the Lot in January 1835 to Samuel Brown for £68/15, suggesting that the land was unimproved. Brown held the land for little more than a year, selling to Thomas Wright in March 1836 for £50.

Thomas was the son of Reid Wright, who immigrated from Tyrone, Ireland in 1821. Reid Wright settled first in Nelson Township, then Chinguacousy, also acquiring land in Toronto Gore and Albion Townships (PAMA, n.d., 74750). Thomas Wright was married to Jane Langtry and the couple had eight children; Thomas owned land in Toronto Gore and Caledon East. (PAMA, n.d., 74830). The Wright ownership of Lot 16, Concession 3, WSCR lasted only six years; the couple sold the land back to Samuel Brown in June 1843 for £100. Brown immediately transferred the land to Andrew Coulter for consideration of £150, apparently in repayment of a loan of £200 given by the latter in 1841 and registered on title (Ontario Land Registry, n.d.(d), 273). The Coulter family would become the long-time owners and eventually the first settlers of the property.

Andrew and Martha (Smith) Coulter were Irish Immigrants from County Down, arriving in Canada c. 1822 and settling in Etobicoke (Etobicoke Historical Society, n.d.). The 1851 Census shows Andrew (58), member of the Church of England, living with Martha (56), and their nine children: Andrew (27), Henry (22), Joseph (20), Eliza

(18), William (16), George (14), Isabella (12), John (25), Martha (18) (1851 Personal Census, District 2, Etobicoke, 103). According to the Census, Andrew Coulter owned three 100-acre and two 50-acre properties in Etobicoke; there is no indication that Lot 16, Con. 3, Caledon West was under cultivation (1851 Agricultural Census, District 2, Etobicoke, 164). In April 1846, the Coulters sold the southern 20 acres of their portion of the east half to Archibald Clark, further reducing their holding to 130 acres. Andrew Coulter died in 1857, and the Caledon lands remained in his estate until the death of Martha Coulter in 1877 (Find a Grave, n.d.).

Tremaine's 1859 map of the County of Peel shows the subject lands under the ownership of the "Coulter Estate" and no structures are shown on the property (Tremaine 1859, Map 3). Likewise, there is no record pertaining to Lot 16, Concession 3, WSCR in the 1861 Agricultural Census (1861 Agricultural Census, District 3, Etobicoke, 34), suggesting that the lands were not under cultivation. There are no Census records for the Coulter family in Caledon West in either 1861 or 1871, both Martha and Robert Coulter – whose name appears in the abstract book – were still resident in Etobicoke, suggesting that the west part of Lot 16, Con. 3 was not settled.

The first indication of habitation on the property is in the 1877 Historical Atlas map, which shows the lands still under the ownership of the Coulter Estate, and shows a structure set back from the southern sideline road, just to the west of the Credit Valley Railway line (Walker and Miles, 1877, Map 3), at the approximate site of Location 15 (AlHa-52). Following Martha Coulter's death in 1877, a Quit Claim was registered for her interest in the property, and in February 1879 the estate transferred the 130-acre property to Andrew and Martha's fourth son, William (Ontario Land Registry, n.d.(e)). William Coulter married Mary McNichol, daughter of Thomas McNichol, who owned the east half of Lot 15, Con. 4. The 1881 Census shows William (40), a farmer, living in Caledon West, with his wife Mary (29), and their five children, Thomas H. (13), Annie E. (11), Charles (11), Martha (8), Albert E. (5) (1881 Census, Schedule 1, Division 3, Caledon, 12). The family still lived together in 1891, with the addition of three more children, Ida, Willis, and Robert (1891 Census, Schedule 1, Cardwell 54/A, Caledon, 3).

William Coulter died in September 1895 and his estate transferred the property to Mary Coulter in January 1896. The 1897 Tax Assessment shows that the property being farmed by their older son, Thomas Henry, who was assessed 126 acres, of which 80 were cleared, with a tax value of \$3500 (PAMA 1897, Division 7, 39). Mary transferred the land to Thomas in 1898, subject to an agreement between them. This agreement resulted in litigation between the mother and son, which led to the property being returned to Mary in 1901. Mary sold the remaining portion of the east half of Lot 16 (about 30 acres) to her son Robert B. Coulter in 1907 for \$7200 (Ontario Land Registry, n.d.(e)), remaining the owner of the west half of Lot 16, Con. 3 WSCR until her death in 1924 (Find a Grave, n.d.).

3.0 ARCHAEOLOGICAL CONTEXT

3.1.1 Existing Conditions

The Study Area is located in a rural part of the Town of Caledon, generally bounded by Mississauga Road to the south, the CP Railway to the north, the western edge of Lot 14, Concession 4 WSCR to the east, and the eastern edge of Lot 18, Concession 4 WSCR to the west. Charleston Sideroad, or Highway 24, is a northeast-southwest road that bisects the Study Area, with approximately two thirds north of the highway and one third to the south. The Study Area is comprised of active agricultural lands, wooded areas, overgrown farmland, including pasture and meadows, as well as residential lots and farm complexes. The Study Area is surrounded by farmland and wooded areas to the south and west, the TPC Toronto at Osprey Valley Golf Course to the north, and the hamlet of Cataract and Forks of the Credit Provincial Park to the east.

Location 15 (AlHa-52) is situated in the northern portion of the Study Area within an agricultural field. It is approximately 70 m northwest of Charleston Sideroad and 570 m northeast of Cataract Road (Supplementary Documentation; Map SD1).

3.1.2 Physiography

The Study Area is situated entirely within the "Guelph Drumlin Field" physiographic region (Chapman and Putnam 1984:137).

The drumlins of this field are not so closely grouped as those of some other areas and there is more intervening low ground, which is largely occupied by fluvial materials. The till in these drumlins is loamy and calcareous, and was derived mostly from dolostone of the Amabel Formation so strategically exposed along the Niagara Cuesta...The till throughout is rather stony, with large surface boulders being more numerous in some localities than others...The ice which moulded this drumlin field advanced from the southeast and the front of the melting receding glacier was at right angles to this, that is, down slope of the plain. The drainage of the ice front was consequently able to find progressively lower and lower outlets, so that the drumlin field is furrowed by more or less parallel valleys running almost at right angles to the trend of the drumlins themselves. There are also numerous interconnecting cross valleys which occupy deeper depressions between drumlins. Along the sides of these valleys there are broad sand and gravel terraces, while the bottoms are often swampy...Incidental to this pattern are the several gravel ridges or eskers which cross the plain in the same general direction as the drumlins.

(Chapman and Putnam 1984:137-138)

The localized topography of the Study Area is generally flat and is approximately 390 to 420 m above sea level. The soils of the Study Area are comprised primarily of Dumfries Loam and Caledon Loam, with a small section of Gilford loam at the western extent. Dumfries soils consist of well drained dark gray-brown loam or sandy loam with a high stone content, commonly used for cultivation of cereal grains, legumes, hay and pasture (Hoffman and Richards 1953). Caledon and Gilford soils both occur as gravelly outwash plains, but Caledon Loam is the well drained member, whereas Gilford Loam is the poorly drained member. Caledon soils consist of very dark grey-brown loam and are used for the cultivation of cereal grains, hay and pasture. Gilford soils consist of very dark grey loam and are primarily used for pastures and woodlots. These three soils tend to require additional fertilizer to maintain adequate organic matter levels, as well as mitigating the hazards of erosion and large stones to cultivation practices (Hoffman and Richards 1953).

The soil within Location 15 (AlHa-52) is comprised of Dumfries loam with loose to moderate compaction and approximately 5-20% stone content.

The closest potable water source is the Credit River, which flows approximately 150 to 600 m north and east of the Study Area, as well as a small unnamed drainage that flows through the western corner of the Study Area. The Credit River Watershed spans 1,000 km² and drains into Lake Ontario at the Port Credit, Mississauga waterfront (Credit Valley Conservation 2022). The closest potable water source to Location 15 (AlHa-52) is an unnamed tributary approximately 50 m to the northeast.

The bedrock deposits in the vicinity date to the Middle and Lower Silurian Periods and consist of the Lockport-Amabel Formation (Hewitt 1972). The Guelph-Lockport Dolomites form the cap of the Niagara Escarpment, outcropping from Niagara Falls though Dundas and Guelph up to the Bruce Peninsula. The Lockport Dolomites consists of three members: Gasport Dolimitic Limestone, Goat Island Dolomite and Eramosa Dolomite. Similarly, the Amabel Formation also consists of three members, including: a finer crystalline blocky dolomite named Lions Head Member, a fine to medium crystalline dolomite named Wiarton Member, and a brown, thin-bedded fine crystalline dolomite named Eramosa Member (Hewitt 1972).

The Study Area lies within the Mixed-wood Plains ecozone of Ontario (The Canadian Atlas Online 2015). Although largely altered by recent human activity, this ecozone once supported a wide variety of deciduous trees, such as various species of ash, birch, chestnut, hickory, oak, and walnut, as well as a variety of birds and small to large land mammals, such as raccoon, red fox, white tailed deer, and black bear.

3.1.3 Registered Archaeological Sites

To compile an inventory of previously documented archaeological resources, the registered archaeological site records maintained by the MCM in the Ontario Archaeological Site Database (OASD) were consulted.

A total of three registered archaeological sites are located within 1 km of Location 15 (AlHa-52), and all of these sites are situated within the current Study Area. None of the sites are located within 300 m of Location 15 (AlHa-52). Section 3.1.4.2 below provides further details on the registered sites identified during the Stage 1 and 2 AA of the Study Area.

Table 2: Registered archaeological sites within 1 km of Location 15 (AlHa-52)

Borden Number	Site Name	Affinity	Site Type
AkHa-33	Location 26	Pre-Contact Indigenous	scatter
AlHa-9	Cameron	Post-Contact	homestead, house
AkHa-23	Location 1	Post-Contact	agricultural

[&]quot;" denotes sites located within 300 m

3.1.4 Previous Archaeological Assessments

Per Section 1.1., Standard 1. of the MCM (Government of Ontario 2011), a review of previous archaeological assessments completed within the limits of the Study Area or within 50 m of the Study Area was undertaken. To WSP's knowledge, one previous archaeological assessment has been documented within the 50 m threshold and two previous archaeological assessments have been documented for the current Study Area.

3.1.4.1 Previous Assessments within 50 m of the Study Area

In 2017, Archaeological Research Associates Ltd. (ARA) conducted a Stage 1 and 2 AA of a study area approximately 0.51 ha in size to satisfy Infrastructure Ontario's due diligence requirements in advance of the planned disposition of the property. The study area for this assessment is adjacent to Charleston Sideroad to the north and is located centrally between portions of the current Study Area. The Stage 1 identified areas of

archaeological potential and areas of previous disturbance, and the Stage 2 consisted of test pit survey at 5 m intervals that did not result in the identification of any archaeological locations. No further work was recommended for this area (ARA 2017).

3.1.4.2 Previous Assessments of the Study Area

In 2001, Archaeological Assessments Ltd. conducted a Stage 1 and 2 AA within the limits of the current Study Area, on part of the eastern halves of Lots 16, 17, and 18, Concession 4 WSCR, in advance of the proposed Osprey Valley West Golf Course. The size of the study area was approximately 89 ha, of which 69 ha was cultivated agricultural lands assessed by pedestrian survey at 5 m intervals, and 20 ha was mixed scrub and woodland assessed by test pit survey at 10 m intervals (Archaeological Assessments Ltd. 2001).

The Stage 1 and 2 AA resulted in the identification of three archaeological locations, including two pre-contact Indigenous findspots, and one historical Euro-Canadian homestead that was registered as the Cameron Site (AlHa-9). The first pre-contact Indigenous findspot consisted of a bifacially worked scraper and the second consisted of a large, finished biface, both manufactured on Onondaga chert. These two findspots were determined to have low cultural heritage value or interest, and no further archaeological assessments were recommended for either location (Archaeological Assessments Ltd. 2001).

The Cameron Site (AlHa-9) was identified during the pedestrian survey of a ploughed agricultural field, located in the northeastern portion of the east half of Lot 16, Concession 4 WSCR. The site measured approximately 27 m north-south by 75 m east-west and produced a total of 66 historical Euro-Canadian artifacts, primarily household ceramics and glass. The Cameron Site (AlHa-9) was interpreted as a mid-19th century Euro-Canadian homestead occupied by the Cameron family until the early to mid-20th century. Historical archival research indicates that James Cameron occupied the site from the 1850s to 1870s, while the 1877 Historical Atlas Map of Caledon Township (Map 3) indicates a structure in the northeastern corner of Lot 16 that corresponds to the same location as the Cameron Site (AlHa-9). As such, the Cameron Site (AlHa-9) was determined to have further cultural heritage value and interest and was recommended for Stage 4 mitigation if avoidance and protection was not possible (Archaeological Assessments Ltd. 2001).

Golder (now WSP) completed the Stage 1 and 2 AA for the current Study Area in the fall of 2020, and spring and summer of 2021 (Golder 2022). The results of the Stage 1 assessment identified archaeological potential within the Study Area for both pre-contact Indigenous and historical Euro-Canadian sites. This determination is based on the presence of well-drained soils, proximity to water sources such as the Credit River, as well as the proximity to registered archaeological sites (e.g., Cameron Site (AlHa-9) found in 2001) and areas of Euro-Canadian settlement dating back to the mid-19th century. Areas of archaeological potential within the Study Area were subject to survey during the Stage 2 AA through a combination of shovel test pit survey and pedestrian survey at 5 m intervals. The Stage 2 assessment resulted in the identification of 29 artifact producing locations, of which 18 are pre-contact Indigenous sites or findspots and 11 are historical Euro-Canadian sites. Of the 29 archaeological producing locations, a total of 15 (Locations 3, 5, 6, 8, 11, 14, 19, 20, 21, 23, 24, 25, and 28) consisted of either a small amount of historical material or a single piece of lithic debitage, biface or scraper. Given the isolated nature of the finds, these locations were concluded to have no further CHVI as the sites do not meet the criteria identified in Section 2.2, Standards 1a-c, of the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011) for determining the need for Stage 3 AA. Similarly, Location 29 was interpreted to be an isolated, intermixed deposit of historical and modern material, mostly consisting of wire-drawn and machine cut nails, and, as such, was considered sufficiently documented with no further CHVI. The remaining 13 sites (Locations 1, 2, 4, 7, 9, 10, 12, 15, 16, 18, 22, 26, and 27) were registered with the MCM, under the Borden system, in accordance with Section 7.12, Standards 1.a. and 1.c. of the MCM (2011) and will be discussed in further detail below.

Location 1 (AkHa-23) consisted of 1,561 historical Euro-Canadian artifacts, 69 faunal elements, and one piece of lithic debitage, recovered from 35 positive test pits, one 1 m² test unit, and 55 CSP points in an area measuring approximately 80 m by 75 m. Given that there were at least 20 artifacts that date Location 1 (AkHa-23) to before 1900, and the fact that the location of the site has been occupied since the mid- to late 19th century and may be associated with a nearby former structure and orchard on historical mapping, the site meets the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having cultural heritage value or interest (CHVI) and is therefore required to undergo Stage 3 AA. The single pre-contact Indigenous artifact was concluded to have no further CHVI as it does not meet the criteria Section 2.2, Standards 1a or b of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for requiring Stage 3 AA.

Location 2 (AkHa-24) consisted of 220 historical Euro-Canadian artifacts and 15 faunal elements, recovered from 26 positive test pits and 65 CSP points in an area measuring approximately 90 m by 60 m. Given that there were at least 20 artifacts that dated Location 2 (AkHa-24) to before 1900, and the fact that the location of the site has been occupied since the mid- to late 19th century and can be tied to a structure on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having CHVI and was therefore recommended to undergo Stage 3 AA.

Location 4 (AkHa-25) consisted of 32 historical Euro-Canadian artifacts and five faunal elements, recovered from recovered from 19 positive test pits in an area measuring approximately 45 m by 35 m. Given that there were at least 20 artifacts that date Location 4 (AkHa-25) to before 1900, and the fact that the location of the site has been occupied since the mid-19th century and can be tied to a nearby structure on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having CHVI and was therefore recommended to undergo Stage 3 AA.

Location 7 (AkHa-26) consisted of 248 historical Euro-Canadian artifacts and six faunal elements, recovered from recovered from 53 positive test pits in an area measuring approximately 70 m by 60 m. Given that there were at least 20 artifacts that dated Location 7 (AkHa-26) to before 1900, and the fact that the location of the site has been occupied since the mid-19th century and can be tied to a nearby structure on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having CHVI and was therefore recommended to undergo Stage 3 AA.

Location 9 (AkHa-27) consisted of 44 historical Euro-Canadian artifacts recovered from an area measuring approximately 35 m by 45 m. Given that there are at least 20 artifacts that dated Location 9 (AkHa-27) to before 1900, and the fact that the location of the site has been occupied since the mid- to late 19th century, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having cultural heritage value or interest (CHVI) and was therefore recommended to undergo Stage 3 AA.

Location 10 (AkHa-28) consisted of single Early Archaic Nettling projectile point (8000 - 6000 BC) (OAS 1980), manufactured on Haldimand chert. As Location 10 (AkHa-28) met the criteria identified in Section 2.2, Standard 1a and b of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011), it was concluded to have further CHVI and recommended for Stage 3 AA.

Location 12 (AkHa-29) consisted of 40 historical Euro-Canadian artifacts recovered from an area measuring approximately 35 m by 35 m. Given that there were at least 20 artifacts that date Location 12 (AkHa-29) to before 1900, and the fact that the location of the site has been occupied since the mid to late 19th century, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having CHVI and is therefore recommended to undergo Stage 3 AA.

Location 15 (AlHa-52), the site to which this report pertains, consisted of 208 historical Euro-Canadian artifacts and one faunal element, recovered from an area measuring approximately 45 m by 50 m. Given that there were at least 20 artifacts that date Location 15 (AlHa-52) to before 1900, and the fact that the location of the site has been occupied since the mid- to late 19th century, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having CHVI and was therefore recommended to undergo Stage 3 AA.

Location 16 (AkHa-30) consisted of nine pieces of lithic debitage recovered over an area measuring approximately 20 m by 25 m. As Location 16 (AkHa-30) met the criteria identified in Section 2.2, Standard 1a of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for requiring Stage 3 AA, it was concluded to have further CHVI.

Location 18 (AkHa-31) consisted of 771 historical Euro-Canadian artifacts, 58 faunal elements, and one piece of lithic debitage, recovered from 80 positive test pits and 100 CSP points in an area measuring approximately 95 m by 85 m. Given that there were at least 20 artifacts that date Location 18 (AkHa-31) to before 1900, and the fact that the location of the site has been occupied since the mid to late 19th century and can be tied to a structure and orchard on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having cultural heritage value or interest (CHVI) and was therefore recommended to undergo Stage 3 AA. The single pre-contact Indigenous artifact was concluded to have no further CHVI as it did not meet the criteria Section 2.2, Standards 1a or b of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for recommending Stage 3 site-specific assessment.

Location 22 (AkHa-32) consisted of 20 pre-contact Indigenous artifacts including 17 pieces of lithic debitage, two projectile points, and one utilized flake, recovered from an area measuring 20 m by 25 m. As Location 22 (AkHa-32) met the criteria identified in Section 2.2, Standard 1a of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for requiring Stage 3 AA, it was concluded to have further CHVI.

Location 26 (AkHa-33) consisted of five pieces of lithic debitage recovered over an area measuring 5 m by 5 m. As Location 26 (AkHa-33) met the criteria identified in Section 2.2, Standard 1a of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011), it was concluded to have further CHVI and recommended for Stage 3 AA.

Location 27 (AkHa-34) consisted of 109 historical Euro-Canadian artifacts and nine faunal elements, recovered from 19 positive test pits across an area measuring approximately 40 m by 30 m. Given that there are at least 20 artifacts that date Location 27 (AkHa-34) to before 1900, and the fact that the location of the site has been occupied since the mid- to late 19th century and can be tied to a structure on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having cultural heritage value or interest (CHVI) and was therefore recommended to undergo Stage 3 AA.

Based on the results of the Stage 1 and 2 AA conducted by Archaeological Assessments Ltd. (2001), the Cameron Site (AlHa-9) consisted of 66 historical Euro-Canadian artifacts recovered over an area measuring approximately 27 m north-south by 75 m east-west. Archaeological Assessments Ltd. recommended the Cameron Site (AlHa-9) be subject to Stage 3 AA and possibly Stage 4 Archaeological Mitigation. By the current *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011), at least 20 artifacts dated the Cameron Site (AlHa-9) to before 1900 and the location of the site had been occupied since the mid- to late 19th century and could be tied to a structure on historical mapping. As such, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having cultural heritage value or interest (CHVI) and was therefore recommended to undergo Stage 3 AA.

Based on the Stage 1 and 2 AA results, the following recommendations were provided (Golder 2022):

- Euro-Canadian sites, including Location 1 (AkHa-23), Location 2 (AkHa-24), Location 4 (AkHa-25), Location 7 (AkHa-26), Location 9 (AkHa-27), Location 12 (AkHa-29), Location 15 (AlHa-52), Location 18 (AkHa-31), Location 27 (AkHa-34), and the Cameron Site (AlHa-9) should be subject to Stage 3 Archaeological Assessment prior to any intrusive activity. The assessments should include researching all historical documentation sources listed Section 3.1 of the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011), as well as any additional relevant sources. Research should also incorporate available historical and municipal information for existing heritage structures or architectural remains that may be related to the archaeological site. Subsequent Stage 3 Archaeological Assessment fieldwork should begin with a controlled surface pick-up (CSP), if applicable, and if not previously done as part of the Stage 2 survey. With the exception of the Cameron Site (AlHa-9), all other Euro-Canadian sites requiring Stage 3 Archaeological Assessment were subject to a CSP as part of the Stage 2 survey. Stage 3 test unit excavation at each Euro-Canadian site should begin by following the standards for Rural Historical Farmsteads as outlined in the MTCS's bulletin 19th Century Rural Historical Farmstead Sites (MHSTCI 2021) and Section 3.2.3 and Table 3.1, Standards 3-4, of the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011). All fieldwork for the Stage 3 Archaeological Assessments should be completed in accordance with the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011).
- 2) Pre-contact Indigenous sites, including Location 10 (AkHa-28), Location 16 (AkHa-30), Location 22 (AkHa-32), and Location 26 (AkHa-33) should be subject to Stage 3 Archaeological Assessment prior to any intrusive activity. The assessments should consist of the hand excavation of 1 m² test units that are placed across the sites to meet the objectives outlined in Section 3.2.3 and Table 3.1, Standards 1-2, in the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011). Location 10 (AkHa-28), Location 16 (AkHa-30), and Location 22 (AkHa-32) were each subject to a CSP that met all requirements outlined in Section 3.2.1 of the MTCS's Standards and Guidelines for Consultant Archaeologists; therefore, a CSP for these archaeological locations is not required prior to Stage 3 test unit excavation. Location 26 (AkHa-33) was identified during test pit survey and does not require a CSP. All fieldwork for the Stage 3 Archaeological Assessments should be completed in accordance with the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011).
- 3) Locations 3, 5, 6, 8, 11, 13, 14, 17, 19, 20, 21, 23, 24, 25, 28, and 29 as well as the pre-contact Indigenous components of Location 1 (AkHa-23) and Location 18 (AkHa-31) have been sufficiently assessed and documented, and no further archaeological assessment is recommended for these locations or components.

4) No further archaeological assessment is recommended for portions of the Study Area that were subject to Stage 2 Archaeological Assessment and no archaeological sites or resources were identified.

5) Until such time that Location 1 (AkHa-23), Location 2 (AkHa-24), Location 4 (AkHa-25), Location 7 (AkHa-26), Location 9 (AkHa-27), Location 10 (AkHa-28), Location 12 (AkHa-29), Location 15 (AlHa-52), Location 16 (AkHa-30), Location 18 (AkHa-31), Location 22 (AkHa-32), Location 26 (AkHa-33), Location 27 (AkHa-34), and the Cameron Site (AlHa-9) can undergo the recommended Stage 3 assessments, the sites should be avoided and protected by establishing 70 m "no-go" zones around the extent of each site as determined by the result of the Stage 2 Archaeological Assessment survey (Supplementary Documentation, Map 1, Tiles A-E).

Based on the proceeding recommendations, the *Aggregate Resources Act* Site Plans for the proposed Caledon Pit/Quarry were recommended to include the following conditions:

- a) A Stage 3 Archaeological Assessment is required for the following sites: Location 1 (AkHa-23), Location 2 (AkHa-24), Location 4 (AkHa-25), Location 7 (AkHa-26), Location 9 (AkHa-27), Location 10 (AkHa-28), Location 12 (AkHa-29), Location 15 (AlHa-52), Location 16 (AkHa-30), Location 18 (AkHa-31), Location 22 (AkHa-32), Location 26 (AkHa-33), Location 27 (AkHa-34), and the Cameron Site (AlHa-9).
- b) The limits of these archaeological sites plus a 70 m buffer shall be identified on the site plans and referred to as an "Archaeological Protection Area".
- c) Alterations are prohibited within the limits of the "Archaeological Protection Area" until such time that the MTCS has entered a report(s) in the Ontario Public Register of Archaeological Reports where the report(s) recommends that the archaeological site is of no further cultural heritage value or interest.
- d) Any archaeological site that is of further cultural heritage value or interest that remains within the licenced area at the time of surrender of the licence will be protected through a restrictive covenant on title.
- e) The protected sites must be fenced (post and wire) prior to commencing extraction.

To the best of our knowledge, no additional archaeological assessments have been conducted within the limits of the current Study Area or within 50 m of the Study Area.

Information concerning specific site locations is protected by provincial policy and is not fully subject to the *Freedom of Information Act*. The release of such information in the past has led to looting or various forms of illegally conducted site destruction. Confidentiality extends to all media capable of conveying location, including maps, drawings, or textual descriptions of a site location. For this reason, maps and data that provide information on archaeological site locations are provided as supplementary documentation and do not form part of this public report.

The MCM will provide information concerning site location to the party or an agent of the party holding title to a property, or to a licensed archaeologist with relevant cultural resource management interests.

4.0 STAGE 3 METHODOLOGY

4.1 Field Methodology

The Stage 3 AA of Location 15 (AlHa-52) was conducted from October 17-21, 24-28, and November 22-25, and 29, 2022, under archaeological consulting license P364 issued to Michael Teal of WSP by the MCM (P364-0208-2022). Nicole Gavin (P1288), delegated licensed archaeologist for WSP, assumed responsibility of undertaking the archaeological fieldwork at the site as per Section 12 of the MCM 2013 *Terms and Conditions for Archaeological* Licences, issued in accordance with clause 48(4)(d) of the *Ontario Heritage Act* (Government of Ontario 1990b).

The weather during the assessment was variable (see Table 3). At no time were the conditions detrimental to the observation or recovery of archaeological material.

Table 3: Weather During the Stage 3 Site-Specific Assessment of Location 15 (AlHa-52)

Date	Temperature	Weather Conditions
October 17, 2022	7°C	Sunny
October 18, 2022	4°C	Overcast
October 19, 2022	5°C	Overcast
October 20, 2022	4°C	Overcast, periodic light rain/snow
October 21, 2022	14°C	Sunny
October 24, 2022	19°C	Sunny
October 25, 2022	18°C	Sunny
October 26, 2022	12°C	Overcast, periodic light rain
October 27, 2022	8°C	Overcast
October 28, 2022	8°C	Sunny
November 22, 2022	5°C	Sunny
November 23, 2022	5°C	Sunny
November 24, 2022	8°C	Sunny
November 25, 2022	5°C	Overcast
November 29, 2022	4°C	Overcast

Photo locations are illustrated on Map 6. All activities undertaken during the assessment were in compliance with the *Ontario Heritage Act* (Government of Ontario 1990b) and the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011).

All coordinates and elevations for the Stage 3 AA were collected with a Trimble Geo7x Global Navigation Satellite System (GNSS) unit with a Zephyr-2 receiver using the UTM NAD 83 (Zone 17) datum and coordinated within the Cansel network (Can-Net) for base station references. The collected coordinates are provided as a six-digit easting with three decimal places, and a seven-digit northing with three decimal places. As the coordinates are a fixed spatial position, each survey observation can be considered a permanent and known datum point regardless of any future disturbance to the location of each observation. The GNSS receiver is a dual frequency differential

GPS (DGPS) capable of real time kinematic (RTK) corrections within the Can-Net Virtual Reference Station (VRS) network. The collected coordinates provide real time accuracy between 1 to 3 cm.

Location 15 (AlHa-52) was relocated from the original Stage 2 assessment data. As a controlled surface pickup (CSP) that met all requirements outlined in Section 3.2.1 of the MCM's *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) was conducted for Location 15 (AlHa-52) as part of the Stage 2 assessment, the Stage 3 assessment began with test unit excavations. A 5 m by 5 m grid was established across the extent of the site, as determined by the Stage 2 surface scatter (Map 6). The grid squares are referred to by the intersection coordinates of their southwest corner. Each 5 m² set was further subdivided into 25 1 m² units, with sub-square number one located in the southwest corner of the 5 m² set, number five in the southeast corner, number six located immediately north of number one, and so on.

Through the Stage 2 assessment, Location 15 (AlHa-52) was identified as a post-contact site where it was not yet clearly evident that Stage 4 mitigation impacts would be required. The site was identified during Stage 2 assessment by a small historical Euro-Canadian artifact scatter over a 50 m (N-S) by 45 m (E-W) area, and as such the Stage 3 excavation strategy of test units followed Section 3.2.3 and Table 3.1, Standards 1-2, of the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011). A 5-m excavation grid was placed over the Stage 2 artifact scatter, and additional test units, amounting to 20% of the initial grid unit total, were placed and excavated in areas of interest within the site.

Each 1 m² test unit was excavated to ploughzone topsoil-subsoil interface which was then shovel shined and examined for evidence of subsurface cultural features prior to excavation to a depth of 5 cm into the subsoil. A test pit ("sondage") was excavated in each unit to confirm that the identified subsoil horizon did not represent a fill layer under which cultural or natural topsoil layers were present. All soil was screened through 6 mm hardware cloth to facilitate the recovery of small artifacts (Image 1 and Image 2). The Stage 3 excavation of Location 15 (AIHa-52) consisted of 55 grid units and 12 infill units for a total of 67 Stage 3 test units across an area measuring 45 m (N-S) by 50 m (E-W) (Map 6; Supplementary Documentation, Map SD1). Four subsurface cultural features were identified during the Stage 3 AA (see Section 5.2 below). Features were recorded, drawn, and photographed before being covered with geotextile and backfilled. All other Stage 3 test units were backfilled upon completion (Image 3).

All excavated artifacts were recorded with reference to their unit provenience and retained for laboratory analysis and description, as per Section 6.0 of the *Standards and Guidelines* (Government of Ontario 2011).

4.2 Artifact Analysis and Curation Methodology

This report and the accompanying artifact inventory (Appendix A) provide a record of the artifacts and sampled material recovered from Location 15 (AlHa-52) and provide the basis for the interpretation of the site. This report aims to offer enough artifact information that a future researcher may determine whether the site is of relevance to their investigation.

4.2.1 The Artifact Inventory System

The artifact inventory was compiled on a Microsoft Access for Microsoft 365 MSO (Version 2202) database.

Each entry in the database contains the following information about a single artifact, or group of artifacts that all fit the same description:

An individual inventory identification number,

■ The spatial location (provenience) within the study area/site (operation, sub-operation, stratum/lot) from which the artifact(s) came,

- The artifact(s) analysis, and,
- The quantity of the entry (how many artifacts).

4.2.2 Artifact Analysis

The artifact analysis was based upon the MCM's standard requirements, as set out in Tables 6.1 and 6.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011). Every artifact entry in the database includes material composition, artifact type (object), and the function which it served and if any alterations had been made to the original artifact (e.g., burning). Additional artifact descriptions are based upon the type of artifact (see below).

4.2.3 Euro-Canadian Artifacts

Only Euro-Canadian artifacts were found during this investigation, including ceramic objects, glass items, and other inorganic and organic cultural objects (metal, stone, flora, fauna). Ceramic ware and glaze types were provided, as well as their decoration and colours. When a maker's mark was visible it was recorded.

Date ranges were provided where possible, and the reference cited. Glass artifact colours and decorative patterns were recorded, in addition to technique of manufacture when identifiable. As with ceramic material, when a marker's mark was visible it was recorded. Date ranges were provided where possible, and the reference cited.

All other artifacts were described in as much detail as possible including surface treatment, decorative pattern, and technique of manufacture when identifiable.

4.2.4 Artifact Storage and Curation

The artifact collection was packed for storage by spatial location (provenience). When inventoried, artifacts were bagged in transparent, re-sealable (zippered) polyethylene bags which are inert and moisture resistant. The contents of each artifact bag were identified on archival quality labels (acid-free, non-yellowing, acrylic adhesive), with an archival ink which is permanent and fade resistant. The artifact bags were then placed in a banker's box (12" W x 15" D x 10" H).

Artifact collections are stored in the London office archaeology lab, until the report has been submitted to the MCM, after which they will be moved to a secure, indoor, climate-controlled storage facility. This collection contains 4,415 artifacts and is packed in one standard size banker's box.

5.0 RECORD OF FINDS

The Stage 3 AA of Location 15 (AlHa-52) was conducted employing the methods described in Section 4.1. Map 6 illustrates the areas assessed and the methods employed, while Image 1 to Image 3 illustrate the conditions during the Stage 3 fieldwork.

The UTM coordinates are listed in the Supplementary Documentation that accompanies this report separately.

The Supplementary Documentation also contains Map SD1 showing the specific locational information of Location 15 (AlHa-52).

Artifacts recovered from the Stage 3 AA of Location 15 (AlHa-52) have been washed, catalogued, and analyzed, and are stored in one banker's box at WSP's office in London, Ontario. Table 4 provides an inventory of the documentary record generated in the field, and a complete catalogue of all artifacts recovered during the Stage 3 assessment of the site is provided below in Appendix A.

Table 4: Inventory of Documentary Record

Document Type	Current Location of Document	Additional Comments
Field Notes	WSP Office in London	33 pages from original field notebook. Hard copies stored in project folder and digitally in project file.
Hand Drawn Maps		One from original field notebook. Hard copies stored in project folder and digitally in project file.
Maps Provided by Client		One map stored in project folder and digitally in project file.
Digital Photographs	WSP Office in London	46 photos stored in project folder and digitally in project file.

5.1 Stratigraphy

Stratigraphy at Location 15 (AlHa-52) consisted of medium to dark grey-brown silty sand topsoil (Lot 1), over yellow-brown sandy silt subsoil (Lot 2), with a 5-20% stone content that increases into the B-Horizon. Large subsurface boulders were encountered in a number of units throughout the site. Test units ranged from 20 cm to 45 cm in depth (Image 4 and Image 5).

5.2 Subsurface Features

A total of four subsurface cultural features were identified during the Stage 3 AA of Location 15 (AlHa-52).

Feature 1 was identified in test units 295E 150N: 1 and 295E 145N: 21, between 20 to 24 cm below surface. The portion of the feature that was visible in the floor of unit 295E 150N: 1 was semicircular and situated in the southeast half of the unit, whereas the feature fill encompassed the entire floor of unit 295E 145N: 21. The feature fill consisted of dark grey-brown silty sand with mortar inclusions (Image 6). The feature fill yielded 134 historical artifacts and 14 faunal elements from investigations of the feature surface. The historical Euro-Canadian artifacts consisted of mostly ceramic tableware and containers, windowpane, and cut nails. Feature 1 is interpreted to be a possible layer or deposit of demolition fill, given the inclusions of structural debris within the fill soils. Feature 1 is approximately 7 m southeast of the historic structural remains found in Feature 3 (Map 6) that are likely affiliated with the historical occupation of the site.

Feature 2 was identified in test units 295E 155N: 1, 295E 155AN 2, and 295E 150N: 21, between 20 to 23 cm below surface. The portion of the feature that was visible in the unit floor for 295E 155N: 1 was semicircular and situated in the southeast corner of the unit, whereas the feature fill encompassed most of the floor in units 295E

155N: 2 and 295E 150N: 21. The feature fill consisted of dark grey-brown silty sand with mortar inclusions (Image 7). The fill yielded 13 historical artifacts from investigations of the feature surface. The historical Euro-Canadian artifacts consisted of several pieces of ceramic tableware and container, two nails, windowpane fragments, and one white-clay pipestem. Feature 2 has also been interpreted to be possible layer or deposit of demolition fill, given the composition of the fill soils. Feature 2 is approximately 6 m east-southeast to the historic structural remains found in Feature 3 (Map 6) that are likely affiliated with the historical occupation of the site.

Feature 3 was initially identified in test unit 290E 155N: 1 and was further investigated through units 290E 155N: 2 and 290E 155N: 6. Feature 3 consisted of a linear portion of fieldstone and mortar foundation, as well as a deposit of stone demolition debris to the west of the foundation and demolition fill soils to the east of the foundation (Image 8). The stone foundation is situated in a northwest-southeast orientation through the three test units, with demolition rubble in units 290E 155N: 1 and 290E 155N: 6, and demolition fill related-soils in most of unit 290E 155N: 2. The demolition fill consisted of dark grey-brown silty sand with mortar inclusions at approximately 23 cm below surface. The demolition fill yielded a total of 234 historical Euro-Canadian artifacts and five faunal elements. The historical Euro-Canadian artifacts consisted of mostly ceramic tableware and containers, glass bottle shards, windowpane, cut or wire nails, and personal/societal-related items. Feature 3 is interpreted to be a partial foundation from a historic structure associated with the 19th century occupation of the site.

Feature 4 was identified in test unit 290E 160N: 1, at 30 cm below surface. The feature encompassed most of the unit floor, except for the southwest corner. The feature fill consisted of dark grey-brown silty sand with mortar and wood inclusions (Image 9). No historical Euro-Canadian artifacts were recovered from investigations of the feature surface as the mortar, wood, and charcoal inclusions were left in-situ. Feature 4 has also been interpreted to be possible deposit of demolition fill, given the similar composition of the fill soils to the other features identified. Feature 4 is situated 4 to 5 m north of the historic structural remains found in Feature 3 (Map 6) that are likely affiliated with the historical occupation of the site.

5.3 Artifact Assemblage

A total of 4,415 artifacts were found during the Stage 3 AA of Location 15 (AlHa-52), including 4,323 historical Euro-Canadian artifacts and 92 faunal elements. The number of artifacts per test unit is provided on Map 6.

5.3.1 Historical Euro-Canadian Artifacts

The historical Euro-Canadian artifacts are summarized by function in Table 5 and detailed in the following sections.

Table 5: Artifacts by Function

Function	Quantity
arms/ammunition	2
food/beverage	2,195
fuel	4
furnishing	54
indeterminate	459
military/navy	1
personal/societal	132
structural	1,445
tools/equipment	31
TOTAL	4,323

5.3.1.1 Food/Beverage Artifacts

The majority (50%) of artifacts from Location 15 (AlHa-52) were related to a food/beverage function. Food/beverage functional artifacts can be further divided into the more specific categories of beverage containers, food containers, food waste, storage container and tableware as seen in the table below.

Table 6: Food/Beverage Artifacts by Secondary Function.

Secondary Function	Quantity
beverage container	41
food container	363
food waste	27
storage container	179
tableware	1,585
TOTAL	2,195

Tableware

The majority of the food/beverage artifacts had a tableware function (72%). Tableware objects were mainly ceramic, but also included glassware and seven metal utensils. Two iron knife blades, a teaspoon, a tablespoon, spoon handles, and two serving spoon fragments were noted (Image 10). Glassware artifacts included four sherds of manganese glass, which was commonly used by 1890 (Lockhart 2006: 54). Identifiable vessel included tumblers and serving vessels (Image 11).

Tableware ceramics provide evidence for dating artifact assemblages as they change more often than other artifacts according to manufacturing and popularity trends. The types of ceramic tableware vessels noted included bowls, cup/mugs, pitchers, a child's plate, plates, saucers, a serving vessel, and teacups. Numerous sherds of flatware and holloware were inventoried that could not be identified to a specific vessel type. Basic ceramic tableware decoration types included within the artifact assemblage are summarized in Table 7 and representative examples of the decoration types are provided in Image 12. Relevant date information is stated where available. Decoration types that are starred have further detail below.

Table 7: Ceramic Tableware Decoration Types

Decoration Type	Quantity	Date	Reference
dyed	2	late 19th century to present	Richardson 2013
edged *	11	commonly used between 1790 and 1860	Hunter & Miller 1994:443
hand painted*	32	19th century	
industrial slip	37	introduced in the 18th century	Sussman 1997:p.1
Jackfield glaze	1	revival in the 1870s to 1880s	MACL 2002
moulded*	91	1840s to 1900	Samford & Miller 2002
plain	1,258	n/a	
other	20	n/a	
Rockingham glaze	11	introduced in the 1850s, peak of Canadian manufacturing in 1890s	Burke 1991:35

Decoration Type	Quantity	Date	Reference
sponged (closely spaced, dabbed colour)	4	common from the 1820s to the 1860s, most popular in the 1830s	Samford 2013:500
sponged: cut	6	1840s to 1870s	Samford 2013:501
sponged: open	4	1860 to 1935	Samford 2013:502
transfer printed*	42	1820 to 1840, period of peak production	Little 1969:15
transfer printed: flow*	3	1840s to 1870s, period of peak production	Richardson 2013
TOTAL	1,537		

[&]quot;*" denotes ceramic decorative types discussed in detail below.

Edge Decorated Ceramics

Edge decorated ceramics were one of the most common decorative types used on tablewares in North America between 1790 and 1860. The earliest documented occurrence of the decorative type was in the mid-1770s with edged wares being produced into the 1890s (Miller 2013:487). The edged pattern consisted of six indeterminate pattern sherds and five unscalloped rim sherds with impressed repetitive pattern which dates from 1840s to 1860s (Miller 2013:488).

Hand Painted Ceramics

A total of 50 sherds were noted with hand painted decoration, including 15 sherds decorated with polychrome late palette. Polychrome late palette decoration became common in the 1830s and remained popular into the 1870s (Samford and Miller 2002). One child's pate fragment contained a painted pink rim line with moulded decoration. Children's plates were most popular between 1820 and 1860 (Wooten 2013:508).

Moulded Decorated Ceramics

A total of 91 moulded sherds were noted. Moulded tableware decoration dates from the 1840s to 1900 (Samford & Miller 2002). The moulded decoration can be divided into three types: foliage (including fruit, flowers, and leaves) which primarily dates to the 1860s, geometric which dates from the 1840s to 1850s and harvest (wheat, including combinations with grapes, corn, clover, etc.), which dates from the 1860s to 1900 (Samford and Miller 2002). A total of 8 sherds with geometric decoration and 33 sherds with harvest decoration were noted. Additionally, harvest decorated sherds totaled 20 identified with Wheat Pattern, which was patented in 1848. Wheat pattern's peak period of production from the 1870s to the 1880s (Sussman 1985:7).

Transfer Printed Ceramics

The most common decorative type recovered from Location 15 (AlHa-52) was transfer print (42 sherds). Transfer print as a ceramic decoration began in 1750s and was developed by John Sadler and Guy Green of Liverpool. It was then adopted by Josiah Wedgwood who brought the technique into the mainstream, achieving huge popularity. Transfer printing is a process by which a pattern or design is etched onto a copper (or other metal) plate. The plate is then inked and the pattern is "transferred" to a special tissue. The inked tissue is then laid onto a bisque fired ceramic item, glazed, and fired again. Transfer print decoration was produced in blue, which remains the most popular colour used, as well as other colours. The colour blue's peak production date is noted in the table below. Other colours found at Location 15 (AlHa-52) included black, brown, green, and purple, which all went through periods of popularity.

Table 8: Transfer Printed Ceramic Dates.

Date	Reference
technique invented c. 1753 (overglaze)	Kybalova 1989, p.212
1783 first overglaze printed patterns	Shaw 1829
1820 to 1840 was the period of peak production	Little 1969, p.15
declined in popularity in 1850s	Miller 1991, p.9
revival in the 1870s	Samford & Miller 2002
produced into the early 20th century	Samford 1997, p.18
black, peak production 1825 to 1838	Samford & Miller 2002
blue, peak production 1817 to 1848	Samford & Miller 2002
brown, peak production 1829 to 1843	Samford & Miller 2002
green, peak production 1832 to 1850	Samford & Miller 2002
pink, peak production 1829 to 1842	Samford & Miller 2002

Another decoration trend was "flown" colours, which became popular in the 1840s (Collard 1967:289). This decorative technique blurred or "flowed" transfer print glazes in the manufacturing process, producing a desired effect. A total of three flow blue sherds were noted at Location 15 (AlHa-52).

Ceramic Manufacturer's Marks

Eight partial pottery manufacturers marks were recorded (Image 13). Marks with features that could be identified and provide dating information are listed below:

- Registration number marks which identify a registration number date to post 1883 (Godden 1988:33).
- Royal Arms marks five of these marks were identified, most Royal Arms marks date to post 1830 (Godden 1988:33).
- Diamond registration mark The 'x" on the right side of the diamond indicates this is a mark from 1868 to 1883 (Godden 1988:629).
- Country of Origin marks, "England" Two marks were noted. The country of origin began to be used widely after the McKinley Tariff Act of 1890. The Act imposed tariffs on many imports (including pottery) in order to make it easier for the American manufacturers to sell their products. It was a requirement of this Act that all such imports carried the name of the country of manufacture (Godden 1988:11).

As well as these general marks, a few specific potteries were able to be identified:

- J&G Meakin, the firm of J&G Meakin was operational from 1851 into the 20th century (Wetherbee 1980:29). This mark in particular shows the hind legs of the lion "rampant" (opposed to "couchant"), indicating the vessel was made post 1890 (Birks 2016).
- Bell, this mark may reference the Glasgow pottery of John and Matthew Perston Bell, which was established around 1840 (Scottish Pottery Society 2024)

 Clementson Brothers, The Clementson Brothers potter was operational from 1865 to 1916, this mark is pre-1910, when "Limited" was added to the mark (Birks 2016).

 W&E Corn, This mark indicates that the vessel was made by the W&E Corn pottery in Burslem, England between 1864 and 1890 (Birks 2016).

Beverage Containers

Beverage containers included soda bottle glass, case/gin bottle glass and wine bottle glass. One crown cap was inventoried (Jones & Sullivan 1989:163) (Image 14).

Food Containers

Of the 363 food container artifacts, 356 were coarse red earthenware holloware and four were coarse buff earthenware holloware sherds. A total of 22 jar sherds were inventoried, while the remaining sherds were from unidentified vessel shapes. These vessels may have been used in the kitchen for food preparation or food storage. Three glass sherds, likely from a sauce or condiment bottle were also inventoried.

Food Waste

A total of 27 artifacts were determined to be food waste, all of which were fragments of butchered mammal bone.

Storage Containers

A total of 72 sherds of ceramic and glass were identified as storage containers. Ceramic sherds were either coarse earthenware or coarse stoneware (n=72 sherds). A total of four jar sherds and three jug sherds were inventoried, while the remaining sherds were from unidentified vessel shapes. The ceramic storage vessels included 53 Albany slipped sherds which was manufactured from 1805 to 1920s (Miller 2000:10) and several sherds exhibited blue painted decoration (Image 14).

A total of 107 glass jar sherds were noted including several with threaded finishes and an embossed jar liner "PAT JUL(Y)" (Image 14). Glass jar liners were patented in 1869 by Lewis R. Boyd (Victorian Collections 2019).

5.3.1.2 Structural Artifacts

A total of 1,445 artifacts from Location 15 (AlHa-52) had a structural function, which can be further divided into building components and building hardware. Building component artifacts included fragments of concrete, red brick, mortar, and windowpane glass. Building hardware included nails, a partial agateware doorknob, and a partial butt hinge. A total of 817 nails were inventoried including 641 common length nails and 176 lath length nails (Image **15**). Nail manufacture is shown in the table below.

Table 9: Nail Types.

Nail Type	Quantity
cut	803
wrought	5
wire	9
TOTAL	817

There were three methods of nail manufacture that developed over time as the industry grew and became more mechanized. The first nails were hand wrought individually by a blacksmith. Machine cut nails became available

after 1800, when a nail cutting machine became of practical use (Vincent 1993:159). By the 1830s, machine cut nails had mostly replaced wrought nails in common use (Vincent 1993:163). Wire nails eventually replaced machine cut nails. They were first introduced in the 1860s but did not become common until the late 1880s to early 1890s (Miller et al 2000; Wells 2000). By 1900, wire nails were the most common nail type sold in North America and had largely taken over the nail market by 1920 with cut nails only making up about 8% of the nails being produced (Wells 2000: 327).

5.3.1.3 Indeterminate Artifacts

The specific function of 459 artifacts could not be identified. The most common indeterminate artifacts were made of metal (n=178). Hardware items included bolts, cotter pins, chain link, nuts, screws, spikes, and staples. Other indeterminate artifacts consisted of miscellaneous materials such as rings, bar, rods, sheet, strap and wire. The function of 280 glass vessel sherds could not be determined, including both glass bottles and glass holloware sherds. Of these indeterminate glass sherds, 13 were manganese glass, commonly used by 1890 (Lockhart 2006:54).

5.3.1.4 Personal/Societal Artifacts

A total 132 personal/societal artifacts were identified which was further divided into adornment, clothing, commerce, footwear, health/hygiene, recreation, and smoking.

Table 10: Personal/Societal Artifacts by Secondary Function.

······································		
Secondary Function	Quantity	
adornment	3	
clothing	27	
commerce	1	
footwear	1	
health/hygiene	55	
recreation	9	
smoking	36	
TOTAL	132	

Adornment artifacts included a glass bead and two other decorative glass pieces that likely inset into jewelry or buttons.

Clothing artifacts included a total of 25 buttons and two buckles (Image **16**). Eighteen Prosser buttons were noted which date post 1840 (Sprague 2002:111). Additionally, three black glass facetted buttons, one 4-hole bone button, one 2-hole iron button, and a 4-hole synthetic button were inventoried. One suspender buckle was a hinged two-piece design patented by Sheldon S. Hartshorn in 1855 (Bennett N.D.)

Health/hygiene artifacts consisted of various medicinal or toiletry bottle glass, including a small disc stopper likely for a perfume/toiletry bottle and two vulcanite comb fragments (Image 17). Vulcanite was used to manufacture a wide variety of items from the middle of the 19th century (Hillman 1986:20).

Recreation artifacts included a complete iron mouth harp and eight ceramic miniature tableware toy sherds (Image 17). The commerce artifact was 1859 U.S.A. penny (Image 17).

A total of 36 smoking related artifacts were inventoried, including one iron tobacco tag/seal, one terracotta clay smoking pipe bowl, and 34 white clay smoking pipe fragments (Image **18**). Metal tobacco tag/seals were introduced in 1880 and continued in use until 1930 (Springate 1997:10). Four pipe stems contained maker's marks, including "MONTREAL/ BANNERMAN" which was operational from 1888 to 1907, "MONTREAL/ HENDERSON", which was operational from 1847 to 1876, "Quebec City/ W&D Bell" which was operational from 1862 to 1881 and one stem marked "MONTREAL" (Bradley 2000:117).

5.3.1.5 Furnishing Artifacts

A total of 54 furnishing artifacts were identified, which was further divided into furniture and lighting. The furniture artifacts were tacks, washers, drawer pulls, and possible decorative grate. The lighting artifacts consisted of 47 sherds of glass lamp chimney sherds and two white glass lamp pedestal sherds (Image **19**). The lamp chimney including six sherds hand crimped rims which were introduced in 1870 (Miller 2000:15) and three manganese lamp chimney sherds. Manganese glass was commonly used by 1890 (Lockhart 2006:54).

5.3.1.6 Tools/Equipment Artifacts

A total of 31 tools/equipment artifacts were identified, which was further divided into horse related, indeterminate, metal work and writing.

Table 11: Tools/Equipment Artifacts by Secondary Function.

Secondary Function	Quantity
horse related	8
indeterminate	1
metal work	3
writing	19
TOTAL	31

The horse related artifacts were two partial horseshoes and six horseshoe nails. The metal work tools included three whetstone fragments. Writing artifacts included two slate pencils, probable slate writing board fragments, one glass ribbed ink well and four stoneware ink bottle fragments (Image 20).

5.3.1.7 Fuel Artifacts

A total of four fuel artifacts were catalogued, including two pieces of coal and two pieces of charcoal.

5.3.1.8 Arms/Ammunition Artifacts

A total of two .22 cartridges were found at Location 15 (AlHa-52) which were introduced in 1871 (Bradley 2008:5) (Image **21**).

5.3.1.9 Military/Naval Artifacts

A partial flat 2-piece button with a fouled anchor within a circle was recovered from Location 15 (AlHa-52) (Image **21**). It's unclear whether this button was an official Navy uniform button or belonged to children's clothing. A popular Victorian clothing style for young boys was the "sailor suit" which was introduced in the mid-19th century and lasted into the early 20th century (Davenport Public Library 2022).

5.3.2 Faunal Elements

A total of 92 indeterminate faunal elements were recovered from Location 15 (AlHa-52). The faunal assemblage includes 68 indeterminate fragments of mammal bone, 16 indeterminate fragments of mammal dentition, and eight indeterminate fragments of avian bone. A total of seven fragments of indeterminate mammal bone were identified as calcined.

5.4 General Site Distribution

The frequency of artifacts across Location 15 (Alha-52) is depicted on Map 6. The largest concentration of material is situated within the central portion of the site, surrounding Feature 3 to the north, east, and south, between grid lines 290E to 295E and 140N to 160N. The masonry and demolition debris identified in Feature 3 has been interpreted as the remains of a possible structure associated with the 19th century occupation of Location 15 (AlHa-52). The units identified to include demolition fill (Feature 1, Feature 2, and Feature 4 on Map 6) yielded some of the highest frequencies of historical Euro-Canadian artifacts for the site. Unit 290E 170N: 1 represents a peripheral high count for the site however this is due to a single glass that was inventoried as 99 individual glass shards. The spatial distribution of diagnostic artifacts from all represented time periods was relatively uniform across the site.

6.0 ANALYSIS AND CONCLUSIONS

Location 15 (Alha-52) is interpreted to be a domestic refuse site associated with the Coulter family's mid- to late 19th century occupation of Lot 16, Concession 4 WSCR. Andrew and Martha Coulter were transferred the land for consideration of £150, in repayment of a £200 loan given to the previous owner (Ontario Land Registry, n.d.(d), 273). There are no Census records for the Coulter family in Caledon West in either 1861 or 1871, as both Martha and Robert Coulter - whose name appears in the abstract book - were still resident in Etobicoke, suggesting that the west part of Lot 16, Con. 3 was not settled. The first indication of habitation on the property is in the 1877 Historical Atlas map, (Map 3) which shows the lands still under the ownership of the Coulter Estate and depicts a structure set back from the southern sideline road, just to the west of the Credit Valley Railway line (Walker and Miles 1877) within the area of Location 15 (AlHa-52). Following Martha Coulter's death in 1877, the estate transferred the 130-acre property to Andrew and Martha's fourth son, William, in February of 1879 (Ontario Land Registry, n.d.(e)). The 1881 Census shows William (40), a farmer, living in Caledon West, with his wife Mary (29), and their five children (1881 Census, Schedule 1, Division 3, Caledon, 12). William Coulter died in September 1895 and his estate transferred the property to Mary Coulter in January 1896. By 1898, Mary had transferred the land to her son Thomas, subject to an agreement between them. This agreement resulted in litigation between the mother and son, which led to the property being returned to Mary in 1901. Mary sold the remaining portion of the east half of Lot 16 (about 30 acres) to her son Robert B. Coulter in 1907 for \$7200 (Ontario Land Registry, n.d.(e)), and remained the owner of the west half of Lot 16, Con. 3 WSCR until her death in 1924 (Find a Grave, n.d.).

Most of the artifacts recovered from Location 15 (AlHa-52) are related to a food and beverage function (n=2,195, 50% of the total assemblage) or structural function (n=1,445, 33% of the total assemblage). Of the dateable assemblage (n=2,435), 74.5% consists of artifacts that generally date to the mid-19th century, including ceramic tableware, cut nails, a Henderson pipe stem, and an 1859 penny. Given that the artifact assemblage at Location 15 (AlHa-52) contains a comparable number of structural artifacts to food/ beverage-related artifacts, it appears that the site is associated with a domestic deposit that can be tied to a former structure on historical mapping (Map 3). This interpretation is further supported by the identification of Feature 3, which consisted of a partially reaveled stone foundation surrounded by demolition fill. Feature 3 may represent the farmhouse illustrated on Pope's 1877 historical atlas map (Map 3). These findings are generally consistent with the conclusions of the Stage 1 and 2 assessment (Golder 2022).

At Location 15 (AlHa-52), four subsurface features were identified (Map 6). As stated above, Feature 3 consists of a partially revealed stone and mortar foundation, overlaid and surrounded by demolition fill which yielded historical Euro-Canadian artifacts. Similarly, Features 1, 2, and 4 are located within 5 to 7 m of Feature 3 and have been interpreted as a layers of demolition fill related to the historical structural remains. Given the results of archival research, the features identified at Location 15 (AlHa-52) are likely associated with the structure shown on the 1877 Historical Atlas map.

In 19th century rural southern Ontario, the average family would clear a small area of their lot and built a shanty or log cabin until they could afford to build a frame house. This process could take 10 to 30 years or longer, depending on their source on income and access to resources (Kenyon 1997). As a homestead developed, additional structures were needed, and old cabins were often converted to outbuildings or framed and bricked (Kenyon 1997). Refuse generated from the homestead was discarded in areas of natural depressions, purposely excavated pits, and privies, or disposed of in old root cellars and building foundations. Shallow refuse deposits were also incorporated as fill when old buildings were demolished (and sometimes burnt) and used to deposit refuse as it was necessary to fill the footprint for safety (MacDonald 1997).

Based on the combined results of the Stage 3 AA, Location 15 (AkHa-25) is concluded to be a mid- to late-19th century domestic refuse site that may represent the initial occupation site of the Coulter family in the local area. Its possible that the turbulent land transfers between the Mary Coulter and her sons near the end of the 19th century resulted in the abandonment of the Location 15 (AlHa-52) site. Given that there was very little 20th century material recovered from Location 15 (AlHa-52), it seems likely that the site was no longer used for residential or refuse purposes by the early 1900s.

The results of the Stage 3 AA of Location 15 (AlHa-52) revealed that 75.4% of the site's occupation dates to before 1870. As such, the site does not meet Standards 2c of Section 3.4 of the *Draft 19th Century Rural Historical Farmstead Sites: Standards for Consultant Archaeologists* (Draft RHF Standards) (Government of Ontario 2021), or Standard 1a of Section 3.4.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for domestic archaeological sites dating after 1830. However, the identification of historical structural remains which may represent a structure built prior to 1870, in combination with a discrete 19th century artifact assemblage, indicates that the site has further CHVI. As such, Location 15 (AlHa-25) has further cultural heritage value or interest (CHVI) and Stage 4 mitigation is required prior to impacts.

Based on the above findings, it has also been concluded that Location 15 (AlHa-52) does not: represent the first generation of settlement in the Caledon area; exhibit shallow cultural deposits and/or stratigraphy; or lack sufficient artifact samples from the Stage 2 and 3 assessments to provide a date range, cultural affiliation, and socio-economic status of the site's occupants (Government of Ontario 2021). Given Location 15 (AlHa-52) does not adhere to the above exceptions outlined in Standard 3, Section 4, of the Draft RHF Standards (Government of Ontario 2021), it does not require hand excavation of the ploughzone or surface layers. Rather, the site meets Standard 2, Section 4, of the Draft RHF Standards (Government of Ontario 2021), which requires RHF sites dating to post-1830 to use mechanical topsoil removal for Stage 4 excavation.

7.0 RECOMMENDATIONS

Given the findings and conclusions of the Stage 3 AA of Location 15 (AlHa-52), the following recommendations are provided:

- 1) Location 15 (AlHa-52) possesses CHVI and should be subject to Stage 4 mitigation prior to any impacts. Through discussions with the proponent, it has been determined that Location 15 (AlHa-52) cannot be avoided, and, as such, the site should be mitigated through Stage 4 excavation.
- 2) As Location 15 (AlHa-52) dates to post-1830 and does not meet the exceptions outlined in Standard 3, Section 4, of the *Draft 19th Century Rural Historical Farmstead Sites: Standards for Consultant Archaeologists* (Draft RHF Standards) (Government of Ontario 2021), the site does not require hand excavation of the ploughzone or surface layers.
- 3) The Stage 4 mitigation of Location 15 (AlHa-52) should entail mechanical topsoil removal, as per Standard 2, Section 4 of the Draft RHF Standards (Government of Ontario 2021). According to the Draft RHF Standards (Government of Ontario 2021) and 2011 Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011), the mechanical topsoil removal of the site should follow Standards 2-6 outlined in Section 4.2.3, as well as Standards 3-5 in Section 4.2.7. Mechanical topsoil removal should only be done with a flat-edged bucket on machinery that pulls soil away and should stop at or above the topsoil/subsoil interface. If mechanical soil removal is thought to be affecting the integrity of cultural features or the recovery of surface artifacts, it should be halted, and hand excavation resumed. Mechanical topsoil removal should extend 10 m beyond any uncovered features and cover the extent of the site within the Study Area as determined by the Stage 3 assessment. All exposed areas should be shovel shined and examined for cultural features following mechanical topsoil removal. If cultural features are identified they must be completely exposed, photographed, mapped and stratigraphically excavated by hand with all artifacts bagged and tagged by context as per Section 4.2.2, Standard 7 (Government of Ontario 2011). If required, soil samples should be taken as per Section 4.4 of the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011).
- 4) Until such time that Location 15 (AlHa-52) can undergo the recommended Stage 4 excavation, the site should be avoided and protected by establishing a "no-go" zone consisting of the site and a 10 m protective buffer determined by the results of the Stage 3 AA (Map 6). As part of the implementation of the avoidance and protection strategy, post and wire fence must be erected at the limits of the "no-go" zone for Location 15 (AlHa-52). The proposed protected area must be shown on all site plans and be labeled as a "no-go" zone. Instructions should be provided to all on-site personnel to stay outside of this area. Any ground alterations to Location 15 (AlHa-52) and its protective buffer area should be avoided. This includes but is not necessarily limited to impacts from aggregate extraction, aggregate processing, vegetation clearance, and the construction of access roads or berms over the site. It also includes minor forms of soil disturbance, such as tree removal, minor landscaping, and utilities installation.

If grading or other soil disturbing activities are anticipated to extend to the edge of the area to be avoided, nogo instructions must be given to all on-site extraction crew and others involved in on-site day-to-day decisions, and a licensed archaeologist should be contracted to inspect and monitor the effectiveness of the avoidance strategy. After completion of these activities, a report will be prepared on the effectiveness of the strategy and submitted to the MCM for review.

Based on the proceeding recommendations and the Aggregates Resource Act site plans submitted to the MNRF by CBM, the following conditions will apply to Location 15 (AlHa-52):

- Stage 4 mitigation is required for Location 15 (AlHa-52) as the site has further cultural heritage value or interest.
- b) The Archaeological Protection Area for Location 15 (AlHa-52) will consist of the limits of the archaeological site, determined by the Stage 3 AA, plus a 10 m protective buffer zone.
- c) The temporarily protected site must be fenced (post and wire) prior to commencing extraction.
- d) Alterations and/or ground disturbing activities are prohibited within the limits of the Archaeological Protection Area for Location 15 (AlHa-52) until such time that a professionally licensed archaeologist has completed archaeological fieldwork on the site and the MCM has entered a report(s) in the Ontario Public Register of Archaeological Reports where the report(s) recommends that the archaeological site is of no further cultural heritage value or interest.
- e) If the licence is surrendered, a covenant will be registered against title for the block containing the protected archaeological site.

The MCM is asked to review the results and recommendations presented herein, accept this report into the Provincial Register of archaeological reports and issue a standard letter of compliance with the Ministry's 2011 Standards and Guidelines for Consultant Archaeologists and the terms and conditions for archaeological licencing.

8.0 ADVICE ON COMPLIANCE WITH LEGISLATION

This report is submitted to the Ministry of Citizenship and Multiculturalism as a condition of licensing in accordance with Part VI of the *Ontario Heritage Act* (Government of Ontario 1990b). The report is prepared to ensure that it complies with the standards and guidelines that are issued by the Minister, and that the archaeological fieldwork and report recommendations ensure the conservation, protection and preservation of the cultural heritage of Ontario. When all matters relating to archaeological sites within the project area of a development proposal have been addressed to the satisfaction of the Ministry of Citizenship and Multiculturalism, a letter will be issued by the Ministry stating that there are no further concerns with regards to alterations to archaeological sites by the proposed development.

It is an offence under Section 48 and 69 of the *Ontario Heritage Act* for any party other than a licensed archaeologist to make any alterations to a known archaeological site or to remove any artifact or other physical evidence of past human use or activity from the site, until such time as a licensed archaeologist has completed archaeological fieldwork on the site, submitted a report to the Minister stating that the site has no further cultural heritage value or interest, and the report has been filed in the Ontario Public Register of Archaeological reports referred to in Section 65.1 of the *Ontario Heritage Act* (Government of Ontario 1990b).

Should previously undocumented archaeological resources be discovered, they may be a new archaeological site and therefore subject to Section 48(1) of the *Ontario Heritage Act*. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed consultant archaeologist to carry out archaeological fieldwork, in compliance with Section 48(1) of the *Ontario Heritage Act* (Government of Ontario 1990b).

The Funeral, Burial and Cremation Services Act, 2002, S.O. 2002, c.33, requires that any person discovering or having knowledge of a burial site shall immediately notify the police or coroner (Government of Ontario 2002). It is recommended that the Registrar of Cemeteries at the Ministry of Consumer Services is also immediately notified.

Archaeological sites recommended for further archaeological fieldwork or protection remain subject to Section 48(1) of the *Ontario Heritage Act* and may not be altered, or have artifacts removed from them, except by a person holding an archaeological licence (Government of Ontario 1990b).
