| | Six Nations of the Grand River: Colleen McNaughton, Joe Van Every, David Tobicoe, Travis Porter | | |
| Lab Technician | Nicole Gavin, Archaeologist | | |
| Material Culture Analyst | Helen Moore, Archaeologist (P328) | | |
| | Lindsay Dales, Archaeologist (R359) | | |
| Report Production | Rebecca Meicenheimer, M.A., Archaeologist (P1013) | | |
| | Shannon Neill-Sword, Cultural Heritage Specialist | | |
| | Helen Moore, Archaeologist | | |
| | Lindsay Dales, Archaeologist | | |
| GIS/Mapping | Bojan Radojevic, GIS Analyst | | |
| Senior Review | Michael Teal, M.A. (P364) | | |
| Administrative Support | Sunita Parajuli, Administrator | | |

Acknowledgements

We respectfully acknowledge that the Study Area is located in the traditional territory of multiple Indigenous groups, including the Mississaugas of the Credit First Nation, Six Nations of the Grand River (the Haudenosaunee), the Huron-Wendat First Nation, and the Métis Nation of Ontario.

Executive Summary

The Executive Summary highlights key points from the report only; for complete information and findings, as well as the limitations, the reader should examine the complete report.

Golder Associates Ltd. (Golder), now WSP Canada Inc. (WSP), was retained by CBM Aggregates, a division of St Marys Cement Inc. (Canada), to conduct a Stage 3 Archaeological Assessment (AA) of Location 2 (AkHa-24), a historical Euro-Canadian site located within the license boundary for the proposed Caledon Pit/Quarry (the Study Area; Map 1). The Stage 3 AA was conducted to meet the requirements of the *Aggregate Resources Act* R.S.O. 1990, c.A.8. (Government of Ontario 1990a), and the Town of Caledon Official Plan and Zoning By-law Amendment under the *Planning Act*, R.S.O 1990, c.P.14 (Government of Ontario 1990b).

Golder previously completed a Stage 1 and 2 AA of the Study Area for the proposed Caledon Pit/Quarry under Project Information Number (PIF) P364-0164-2020 (Golder 2022). The area assessed is approximately 261.2 hectares (ha) located within part of Lots 15 to 17, Concession 4 West of Centre Road (WSCR), as well as part of Lot 16, Concession 3 WSCR, in the geographic Township of Caledon, former County of Peel, now the Town of Caledon, Regional Municipality of Peel (Peel Region) (Map 1). It consists predominately of cultivated fields in addition to uncultivated farmland (i.e., pastures), farmstead/residential areas, and wooded areas.

The Stage 1 and 2 AA resulted in the identification of 29 new archaeological sites (Locations 1 through 29) (Golder 2022) and re-established the location of the Cameron Site (AlHa-9), which was previously identified in 2001 (Archaeological Assessments Ltd. 2001). Of the 30 archaeological sites within the Study Area, a total of 14 were considered to have further cultural heritage value or interest and Stage 3 AA was recommended.

Location 2 (AkHa-24) is one of the 14 sites that was recommended for Stage 3 AA. It is a historical Euro-Canadian site that was identified through a combination of Stage 2 test pit survey and pedestrian survey of a residential lot and the surrounding agricultural field. During the Stage 2 survey, the site was located over an area measuring 60 m north-south by 90 m east-west within part of Lot 15, Concession 4 WSCR (Supplementary Documentation; Map SD1).

The Stage 3 AA of Location 2 (AkHa-24) consisted of the hand excavation of 45 test units across an area measuring approximately 60 m north-south by 80 m east-west. The Stage 3 excavations resulted in the recovery of 4,183 total artifacts, of which 2,962 were from an intact context and 1,221 were from a disturbed, fill context. The assemblage from an intact context includes 2,547 historical and 20th century Euro-Canadian artifacts, and 415 faunal elements. The Stage 3 excavations also resulted in the identification of four subsurface cultural features (Map 6).

The Location 2 (AkHa-24) artifact assemblage consists of material that is typically associated with domestic occupations, including structural artifacts (n=1,255, 51% of the total assemblage), artifacts with an indeterminate function (n=595, 23% of the total assemblage), and food/beverage related artifacts (n=536, 21% of the total assemblage). The dateable assemblage (n=1,373, 53.9% of the total assemblage) consists of 1,007 nails (73% of the dateable assemblage), of which 44% are wire nails that generally date to post-1860 and 29% are cut nails that generally date from the mid- to late 19th century. Overall, the late 19th century and 20th century material consists of 62.6% of the dateable assemblage, with the remaining 37.4% dating to pre-1870. Of the pre-1870 material, 0.15% (two wrought nails) dates to the early 19th century.

Location 2 (AkHa-24) is interpreted to be a domestic refuse site and homestead associated with the continuous occupation of the property from the mid-19th century through to the 21st century. Historically, Location 2 (AkHa-24) relates to the mid- to late 19th century and 20th century occupation by the Morris family, who owned the western half of Lot 15 until it was sold in 1911.

Based on the findings enclosed in this report, WSP concludes that a sufficient level of archaeological data has been revealed to provide an understanding of the mid- to late 19th century occupation of the Morris family at Location 2 (AkHa-24) and assess the CHVI of the site. Location 2 (AkHa-24) does not meet Standard 2c of Section 3.4 of the Draft RHF Standards (Government of Ontario 2021), or Standard 1a-b of Section 3.4.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for domestic archaeological sites dating after 1830. As such, the historical Euro-Canadian component of Location 2 (AkHa-24) is determined to have been sufficiently documented and is concluded to have no further CHVI. Therefore, Location 2 (AkHa-24) does not require Stage 4 mitigation prior to development impacts.

The results of the Stage 3 AA, and the analysis and conclusions presented in Section 6.0, provide the basis for the following recommendation:

1) The historical Euro-Canadian component of Location 2 (AkHa-24) has no further cultural heritage value or interest and is not recommended for Stage 4 mitigation of impacts.

The Ontario Ministry of Citizenship and Multiculturalism is asked to review the results and recommendations presented herein, accept this report into the Provincial Register of archaeological reports and issue a standard letter of compliance with the Ministry's 2011 *Standards and Guidelines for Consultant Archaeologists* and the terms and conditions for archaeological licencing.

Study Limitations

WSP has prepared this report in a manner consistent with that level of care and skill ordinarily exercised by members of the archaeological profession currently practicing under similar conditions in the jurisdiction in which the services are provided, subject to the time limits and physical constraints applicable to this report. No other warranty expressed or implied is made.

This report has been prepared for the specific site, design objective, developments, and purpose described to WSP by CBM Aggregates, a division of St. Marys Cement Inc. (the Client). The factual data, interpretations, and recommendations pertain to a specific project as described in this report and are not applicable to any other project or site location.

The information, recommendations, and opinions expressed in this report are for the sole benefit of the Client. No other party may use or rely on this report or any portion thereof without WSP's express written consent. If the report was prepared to be included for a specific permit application process, then upon the reasonable request of the Client, WSP may authorize in writing the use of this report by the regulatory agency as an Approved User for the specific and identified purpose of the applicable permit review process. Any other use of this report by others is prohibited and is without responsibility to WSP. The report, all plans, data, drawings, and other documents as well as electronic media prepared by WSP are considered its professional work product and shall remain the copyright property of WSP, who authorizes only the Client and Approved Users to make copies of the report, but only in such quantities as are reasonably necessary for the use of the report or any portion thereof to any other party without the express written permission of WSP. The Client acknowledges that electronic media is susceptible to unauthorized modification, deterioration, and incompatibility and therefore the Client cannot rely upon the electronic media versions of WSP's report or other work products.

Unless otherwise stated, the suggestions, recommendations, and opinions given in this report are intended only for the guidance of the Client in the design of the specific project.

Special risks occur whenever archaeological investigations are applied to identify subsurface conditions and even a comprehensive investigation, sampling and testing program may fail to detect all or certain archaeological resources. The sampling strategies incorporated in this study, if any, comply with those identified in the Ministry of Citizenship and Multiculturalism 2011 *Standards and Guidelines for Consultant Archaeologists*.

APPENDICES

APPENDIX A Location 2 (AkHa-24) Artifact Catalogue

1.0 PROJECT CONTEXT

1.1 Development Context

Golder Associates Ltd. (Golder), now WSP Canada Inc. (WSP), was retained by CBM Aggregates, a division of St Marys Cement Inc. (Canada), to conduct a Stage 3 Archaeological Assessment (AA) of Location 2 (AkHa-24), a historical Euro-Canadian site located within the license boundary for the proposed Caledon Pit/Quarry (the Study Area; Map 1). The Stage 3 AA was conducted to meet the requirements of the *Aggregate Resources Act* R.S.O. 1990, c.A.8. (Government of Ontario 1990a), and the Town of Caledon Official Plan and Zoning By-law Amendment under the *Planning Act*, R.S.O 1990, c.P.14 (Government of Ontario 1990b).

Golder previously completed a Stage 1 and 2 AA of the Study Area for the proposed Caledon Pit/Quarry under Project Information Number (PIF) P364-0164-2020 (Golder 2022). The area assessed is approximately 261.2 hectares (ha) located within part of Lots 15 to 17, Concession 4 West of Centre Road (WSCR), as well as part of Lot 16, Concession 3 WSCR, in the geographic Township of Caledon, former County of Peel, now the Town of Caledon, Regional Municipality of Peel (Peel Region) (Map 1). It consists predominately of cultivated fields in addition to uncultivated farmland (i.e., pastures), farmstead/residential areas, and wooded areas.

The Stage 1 and 2 AA resulted in the identification of 29 new archaeological sites (Locations 1 through 29) (Golder 2022) and re-established the location of the Cameron Site (AlHa-9), which was previously identified in 2001 (Archaeological Assessments Ltd. 2001). Of the 30 archaeological sites within the Study Area, a total of 14 were considered to have further cultural heritage value or interest (CHVI) and Stage 3 AA was recommended.

Location 2 (AkHa-24) is one of the 14 sites that was recommended for Stage 3 AA. It is a historical Euro-Canadian site that was identified through a combination of Stage 2 test pit survey and pedestrian survey of a residential lot and the surrounding agricultural field. During the Stage 2 survey, the site was located over an area measuring 60 m north-south by 90 m east-west within part of Lot 15, Concession 4 WSCR (Supplementary Documentation; Map SD1).

The Stage 3 AA was conducted under professional license P364, issued to Michael Teal of Golder by the MCM (PIF P364-0202-2022). All activities undertaken during the assessment followed the *Ontario Heritage Act* and the MCM's (2011) *Standards and Guidelines for Consultant Archaeologists*. All fieldwork occurred between July 12 and November 22, 2022. Permission to access the Study Area to conduct all required archaeological fieldwork activities, including the recovery of artifacts, was provided by CBM Aggregates.

1.2 Objectives

The Stage 3 AA was completed with the following objectives:

- To determine the extent of the archaeological site and the characteristics of the artifacts.
- To collect a representative sample of artifacts.
- To assess the cultural heritage value or interest of the archaeological site.
- To determine the need for mitigation of development impacts and recommend appropriate strategies for mitigation and future conservation.

2.0 HISTORICAL CONTEXT

The following historical narrative is intended to provide a general overview of the interpreted land use during the "Pre-Contact Period" and "Early Contact Period" within the vicinity of the current study area. This historical overview is primarily based on archaeological and historical interpretations inferred over the past 50 years, and generally reflect inferences and interpretations made by non-Indigenous representatives.

The text below is not intended to provide a comprehensive historical overview of the landscape prior to, and following the arrival of Europeans to Ontario, but rather provide a general overview context that can be referenced when determining the potential for archaeological resources within the current project study area.

The text and comments below, including the cited references, may reflect archaeological and contemporary literature within general publications, but may not represent the opinions of those Indigenous communities whose history it is purported to reflect.

2.1 Pre-Contact Indigenous Period

The general culture history of southern Ontario based on Ellis and Ferris (1990) is summarised in Table 1, while Map 2 displays the pre-contact Indigenous culture history of southern Ontario.

| Period | | Time Period (circa) | Characteristics | |
|---------|--------|------------------------|---|--|
| | | 9000 - 8400 BC | Gainey, Barnes, and Crowfield traditions; small bands; mobile hunters and gatherers and large territories; fluted projectiles. | |
| | | 8400 - 8000 BC | Holcomb, hi-Lo and Lanceolate biface traditions; continuing mobility; campsite/way-station sites; smaller territories are utilized; non-fluted projectiles. | |
| Archaic | Early | 8000 - 6000 BC | Side-notched, Corner-notched (e.g., Nettling, Thebes) and Bifurcate Base traditions; growing diversity of stone tool types; heavy woodworking tools appear (e.g., ground stone axes and chisels). | |
| | Middle | 6000 - 2500 BC | Stemmed (e.g., Kirk, Stanley/Neville), Brewerton side- and corner-notched traditions; reliance on local resources; populations increasing; more ritual activities; fully ground and polished tools; net-sinkers common; earliest copper tools. | |
| | Late | 2000 - 950 BC | Narrow Point (e.g., Lamoka), Broad Point (e.g., Genesee), and Small Point (e.g., Crawford Knoll) traditions: less mobility; use of fish-weirs; more formal cemeteries appear; stone pipes emerge; long-distance trade (marine shells and galena). | |

| Period | | Time Period (circa) | Characteristics | |
|----------|-------------------------|------------------------|--|--|
| Woodland | Early | 950 - 400 BC | Meadowood tradition; cord-roughened ceramics emerge; Meadowood cache blades and side-notched points; Bands of up to 35 people. | |
| | Middle | 400 BC - AD 500 | Saugeen tradition; stamped ceramics appear; Saugeen projectile points; cobble spall scrapers; seasonal settlements and resource utilization; post holes, hearths, middens, cemeteries, and rectangular structures identified. | |
| | Transitional | AD 550 - 900 | Princess Point tradition; cord roughening, impressed lines, and punctate designs on pottery; adoption of maize horticulture at the western end of Lake Ontario; oval houses and 'incipient' longhouses; first palisades; villages with 75 people. | |
| | early Late Woodland | AD 900 - 1300 | Glen Meyer tradition; settled village-life based on agriculture; small villages (0.4 ha) with 75-200 people and 4-5 longhouses; semi-permanent settlements. | |
| | middle Late Woodland | AD 1300 - 1400 | Uren and Middleport traditions; classic longhouses emerge; larger villages (1.2 ha) with up to 600 people; more permanent settlements (30 years). | |
| | late Late Woodland | AD 1400 - 1600 | Pre-contact Neutral tradition; larger villages (1.7 ha); examples up to 5 ha with 2,500 people; extensive croplands; also, hamlets, cabins, camps, and cemeteries; potential tribal units; fur trade begins ca. 1580; European trade goods appear. | |

Research and previous archaeological assessments have demonstrated that the area around the Town of Caledon was intensively occupied by pre-contact Indigenous communities from the Paleo period up to the time of contact. The following subsections outline the cultural or temporal periods recognized for southern Ontario more generally.

2.1.1 Paleo Period

The Paleo Period represents a temporal classification developed by archaeologists and does not reflect any inferences of initial human habitation. Based on archaeological investigations, the first human occupation of southern Ontario begins just after the end of the Wisconsin Glacial Period. Although there were a complex series of ice retreats and advances which played a large role in shaping the local topography, southern Ontario was ice free by approximately 12,500 years ago.

The archaeological record has documented human settlement at 11,000 years ago, when the area was settled by Indigenous groups who had been living south of the Great Lakes. The period of these early inhabitants is known as the Paleo Period (Ellis and Deller 1990). The Paleo Period in Ontario is broadly characterized by many small groups of hunter-gatherers whose subsistence strategies followed a pattern of seasonal mobility over large areas,

often travelling distances in excess of 150 km in an effort to procure raw materials for the production of lithic tools and the hunting of contemporary animals along migratory routes including caribou as well as mammoth and mastodon. For example, groups in southern Ontario appear to have followed a seasonal round that extended from as far south as Chatham to the Horseshoe Valley north of Barrie.

The research suggests that population densities were very low during the Early Paleo Period, and, as such, archaeological examples of sites from this time are rare (Ellis and Deller 1990:54). The current understanding of Early Paleo locality is that sites tend to be situated in elevated topography on well-drained loamy soils with many of the known sites located on former beach ridges associated with glacial lakes. Many of the archaeologically investigated Paleo sites are relatively small in size compared to later periods and typically represent contemporary camp sites; however, there are large sites, such as the Parkhill and Fisher sites, identified as extending over several hectares. It is likely these larger sites were formed as people continued to occupy the same area for short durations over the course of several years. Given the placement of many sites on elevated locations, it has been suggested that they may represent communal hunting camps as they would likely have been advantageous to observe and intercept migratory mammals such as caribou (Ellis and Deller 1997). Other sites, such as smaller Early Paleo camps, were situated throughout the interior of Ontario were typically situated adjacent to wetlands.

Paleo Period sites are commonly recognized by the presence of distinctive, finely-crafted lance points. Knives, gravers, scrapers and a variety of other stone processing tools are also typically associated with Paleo Period sites (MCR 1981). Diagnostic signatures of Early Paleo Period populations include the production of projectile points with channel flakes or flutes predominately manufactured from Collingwood or Onondaga chert. Paleo Period fluted points may be a reflection of large game hunting, while tools such as scrapers, piercing implements and gravers that are typically associated with Paleo Period sites may have been used in the manufacture and repair of wooden implements, bone tools and clothing (Peers 1985).

By the Late Paleo Period (8400-8000 BC), enclosed coniferous forests with some minor deciduous elements became established in southern Ontario. It is likely that many of the large game species that had been hunted during the early epoch of the Paleo Period had either moved further north, or as in the case of the mastodons and mammoths, became extinct. Similar to the inhabitants during the Early Paleo Period, Late Paleo Period populations traversed large territories in response to seasonal resource fluctuations. The transition to the Late Paleo Period also included projectile points comprised of smaller unfluted projectiles along with lanceolate parallel flaked stemmed and non-stemmed Plano points, while hunting strategies may have transitioned from communal groups to more individualized pursuits (Ellis and Deller 1997).

2.1.2 Archaic Period

During the Early Archaic Period (8000-6000 BC), a gradual increase in atmospheric humidity in conjunction with warmer summers influenced the environmental landscape. Fossil pollen and spore identification from sedimentation cores lifted from Lovesick Lake provide evidence of climate change, with jack pine forests becoming dominant during the beginning of the Early Archaic Period (Teichroeb 2007).

Concurrent with the environmental evolution during the Early Archaic Period were notable diagnostic technological changes including the appearance of side and corner-notched projectile points. Other significant innovations included the introduction of ground stone tools such as celts and axes, which may reflect an emerging woodworking industry.

Populations in Ontario during this period primarily utilized maritime landscapes during the spring, summer and fall seasons with large base camps on islands, near river mouths, and on the shores of embayment's where a variety of flora, fish, and wild fowl resources could be obtained. Smaller hunting and specialized campsites were also established in the uplands and along smaller watercourses.

During the Middle Archaic Period (6000 – 2000 BC) the environmental landscape continued to evolve with the jack pine forests prevalent during the Early Archaic Period being primarily replaced by white pine growth, suggesting a gradual increase in humidity and a continuation of hot summers (Teichroeb 2007).

The trend towards more diverse toolkits also continued into the Middle Archaic Period, as the presence of net-sinkers and fish weirs indicate that fishing was an important component of the subsistence strategy. Net-sinkers were typically used with both gill nets and seine nets, which were employed for both shoreline and offshore fishing activities. Gill nets were kept vertical with stone sinkers on the bottom and floats on the top and were often anchored to a specific location with the use of larger stones. Seine nets acted as fences and were used to corral and hold the fish and needed to be kept tight to the bottom of the water by attaching many closely spaced sinkers to the bottom of the net with floats attached to the top (Ingleman *et al* 2012; Prowse 2003). Many contemporary fishing nets were commonly made from hemp or nettle (Needs-Howarth 1999) and are rarely preserved in the archaeological record (Ingleman *et al* 2012).

The Middle Archaic also marks when bannerstones were first manufactured. Bannerstones are carefully crafted ground stone devices that served as a counterbalance for atlatls or spear-throwers. Another characteristic of the Middle Archaic is an increased reliance on local, sometimes lower-quality chert resources for the manufacturing of projectile points. During earlier periods, groups likely occupied large territories which may have increased access to a primary outcrop of high-quality chert during their seasonal round. However, during the Middle Archaic, groups who inhabited smaller territories may only have had access to lower quality materials which had been deposited by the glaciers in the local till and river gravels.

It was during the latter part of the Middle Archaic Period that long-distance trade routes began to develop, spanning the northeastern part of the continent. In particular, copper tools manufactured from a source located northwest of Lake Superior were being traded (Ellis, Kenyon and Spence 1990), with a wide range of copper tools such as socketed and tanged spear points, projectile points, harpoons, crescent knives, gouges, pikes and celts being produced during this period (Dawson 1983).

Trade networks established during the Middle Archaic Period also continued to flourish during the Late Archaic Period (2500-950 BC). Copper implements from northern Ontario and marine shell artifacts from the Mid-Atlantic coast have been frequently encountered in burial contexts (Ellis, Kenyon and Spence 1990; Ellis, Timmins and Martelle 2009).

During the Late Archaic the trend towards decreased territory size and a broadening subsistence base continued. In the archeological record, Late Archaic sites are more numerous than Early or Middle Archaic sites suggesting that populations were increasing. Regionalized variations during the Late Archaic Period are also reflected in projectile point manufacturing, with distinct locally diagnostic styles appearing. Other artifacts including polished stone pipes and banded slate gorgets also appear on Late Archaic Period sites, as well as "birdstones", which are small, bird-like effigies usually manufactured from green banded slate (Ellis, Kenyon and Spence 1990).

It is during the Late Archaic Period that defined cemeteries are identified. The appearance of burial pits during the Late Archaic Period has been interpreted as a possible response to increased population densities and

competition between local groups for access to resources. It has been theorized that cemeteries and burial grounds may have provided strong symbolic claims over a local territory and the surrounding resources and are often located within areas of elevated topography containing well-drained sandy and gravel soils adjacent to major watercourses. Burial sites reflect the importance of the landscape to Indigenous populations as they represent locations along travel routes that would be returned to, where feasts would occur, and the dead could be honoured (Taylor 2015).

2.1.3 Woodland Period

The Early Woodland Period (940 to 400 BC) is distinguished archaeologically from the Late Archaic Period primarily by the introduction of ceramic technology. The first pots were thick walled and friable, suggesting they may have primarily been used in the processing of nut oils by boiling crushed nut fragments in water and skimming off the oil (Spence, Pihl and Murphy 1990). These early vessels were not easily portable, and their fragile nature suggests they may have required regular replacement. There have also been numerous Early Woodland Period sites identified where ceramics were absent from the recovered assemblage, suggesting ceramic vessels may have not been completely integrated within the daily lives of Early Woodland Period populations.

Besides the addition of ceramic technology, the cultural affinity of Early Woodland Period inhabitants shows a great deal of continuity with the preceding Late Archaic Period. For instance, birdstones continued to be manufactured, although the Early Woodland Period varieties have "pop-eyes" that protrude from the sides of their heads (Spence, Pihl and Murphy 1990). Another example of general continuity from the terminal segment of the Archaic Period is represented by the thin, well-made projectile points, although the Early Woodland Period variants were side-notched rather than corner-notched, giving them a slightly altered and distinctive appearance (Spence, Pihl and Murphy 1990).

Evidence of exchange networks during the early stages of the Woodland Period indicate numerous reciprocal, down-the-line exchanges between trade partners located both short and long distances away. There is a gradual intensification of these types of trade throughout the period continuing into, and reaching its apex in, the Middle and Late Woodland Periods (Hartmann 1996). During the last 200 years of the Early Woodland Period, projectile points manufactured from high quality raw materials from the American Midwest begin to appear on sites in southwestern Ontario.

The Middle Woodland Period (300 BC to 500 AD) reflects an evolving transition from patterns observed from archaeological excavations documenting Archaic and Early Woodland Period sites. Middle Woodland peoples relied much more extensively on ceramic technology where vessels are often heavily decorated with impressed designs covering the entire exterior surface and upper portion of the vessel interior. Consequently, even very small fragments of Middle Woodland vessels are easily identifiable.

While Middle Woodland Period populations still relied on hunting and gathering to meet their subsistence requirements, an increased consumption of fish became an important dietary component. Some Middle Woodland Period sites have produced literally thousands of bones from spring spawning species including walleye and sucker (MCR 1981). Food sources such as shellfish, tree nuts and a proliferation of plant greens and seeds were also utilized during the Middle Woodland Period. The seasonal variety and relative dependability of these food sources encouraged population growth in many areas.

It is at the beginning of the Middle Woodland Period that rich, densely occupied sites appear along the margins of major rivers and lakes. While these areas had been utilized by earlier peoples, Middle Woodland sites are

significantly different in that the same location was occupied off and on for as long as several hundred years and large deposits of artifacts often accumulated. The land use patterns reflected from archaeological investigations of Middle Woodland Period sites generally reflect densely occupied locations that appear on the valley floor of major rivers, often producing sites with significant artifact deposits. Unlike earlier seasonally utilized locations, many Middle Woodland Period sites appear to have functioned as base camps, occupied periodically over the course of the year and situated to take advantage of the greatest number of resources. There are also numerous small upland Middle Woodland Period sites, many of which can be interpreted as special purpose camps where localized natural resources were utilized (MCR 1981).

The Late Woodland Period began with a shift in settlement and subsistence patterns involving an increasing reliance on corn horticulture (Fox 1990:185; Smith 1990; Williamson 1990:312). Corn may have been introduced into southwestern Ontario from the American Midwest as early as AD 600 or a few centuries before. However, corn did not become a dietary stapleuntil at least three to four hundred years later, and then the cultivation of corn gradually spread into south-central and southeastern Ontario.

During the early Late Woodland, particularly within the Princess Point Complex (circa AD 500-1050), a number of archaeological material changes have been noted: the appearance of triangular projectile point styles, first seen during this period begin with the Levanna form; cord-wrapped stick decorated ceramics using the paddle and anvil forming technique replace the mainly coil-manufactured and dentate stamped and pseudo-scallop shell impressed ceramics; and if not appearance, increasing use of maize (Zea mays) as a food source (Bursey 1995; Crawford et al. 1997; Ferris and Spence 1995:103; Martin 2004 [2007]; Ritchie 1971:31-32; Spence et al. 1990; Williamson 1990:299). Aside from projectile points, Princess Point Complex assemblages are predominantly characterized by informal or expedient flake tools and ground stone and bone artifacts are rare (Ferris and Spence 1995:103; Shen 2000).

The Late Woodland Period is considered to coincide with the beginning of agricultural life ways in southern Ontario. Researchers have suggested that a warming trend during this time may have encouraged the spread of maize into this part of the province, providing a greater number of frost-free days (Stothers and Yarnell 1977). Further, shifts in the location of sites have also been identified with an emphasis on riverine, lacustrine and wetland occupations set against a more diffuse use of the landscape during the Middle Woodland (Dieterman 2001). These locations may have provided nutrient-rich soil for agriculture, while growing sedentism is seen as a departure from Middle Woodland hunting and gathering and may reflect growing investment in the care of garden plots of maize (Smith 1997:15).

The first agricultural villages documented in the archaeological record in southern Ontario have been dated to the 10th century. Unlike the riverine base camps of the Middle Woodland Period, these sites are located in uplands locations on well-drained sandy soils. Identified archaeologically as "Early Late Woodland" (AD 900-1300), it is suggested that these early populations were ancestral to the Iroquoian groups which later inhabited southern Ontario at the time of first European contact.

Village sites dating between AD 900 and 1300 share many attributes with the historically investigated Iroquoian sites, including the presence of longhouses and sometimes palisades. These early longhouses averaged 12.4 m in length (Dodd et al. 1990:349; Williamson 1990:304-305). It is also quite common to find the outlines of overlapping house structures, suggesting that these villages were occupied long enough to necessitate rebuilding. The Jesuits reported that the Huron moved their villages once every 10-15 years, when the nearby soils had been depleted by farming and conveniently collected firewood grew scarce (Pearce 2018). It seems likely that

Early Late Woodland peoples lived in villages for considerably longer, as they relied less heavily on corn than did later groups, and their villages were much smaller, placing less demand on nearby resources.

Judging by the presence of carbonized corn kernels and cob fragments recovered from sub-floor storage pits, agriculture was becoming a vital part of the early Late Woodland economy. However, it had not reached the level of importance it would during the middle Late and late Late Woodland Periods. There is ample evidence to suggest that more traditional resources continued to be exploited and comprised a large part of the subsistence economy. Seasonally occupied special purpose sites relating to deer procurement, nut collection, and fishing activities, have all been identified. While beans are known to have been cultivated later in the Late Woodland Period, they have yet to be identified on early Late Woodland sites.

The middle Late Woodland Period (AD 1300-1400) witnessed several interesting developments in terms of settlement patterns and artifact assemblages. Changes in ceramic styles have been carefully documented, allowing the placement of sites in the first or second half of this 100-year period. Moreover, villages, which averaged approximately 0.6 hectares in extent during the early Late Woodland, now consistently range between one and two hectares.

House lengths also change dramatically, more than doubling to an average of 30 m, while houses of up to 45 m have been documented. This increase in longhouse length has been variously interpreted. The simplest possibility is that increased house length is the result of a gradual, natural increase in population (Dodd et al. 1990:323, 350, 357; Smith 1990). However, this does not account for the sudden shift in longhouse lengths around AD 1300. Other possible explanations involve changes in economic and socio-political organization (Dodd et al. 1990:357). One suggestion is that during the middle Late Woodland Period small villages were amalgamating to form larger communities for mutual defense (Dodd et al. 1990:357). If this was the case, the more successful military leaders may have been able to absorb some of the smaller family groups into their households, thereby requiring longer structures. This hypothesis draws support from the fact that some sites had up to seven rows of palisades, indicating at least an occasional need for strong defensive measures. There are, however, other middle Late Woodland villages which had no palisades present (Dodd et al. 1990). More research is required to evaluate these competing interpretations.

The lay-out of houses within villages also changes dramatically by AD 1300. During the early Late Woodland Period villages were planned with houses oriented in various directions. During the middle Late Woodland Period villages are organized into two or more discrete groups of tightly spaced, parallel aligned, longhouses. It has been suggested that this change in village organization may indicate the initial development of the clans which were a characteristic of the historically known Iroquoian peoples (Dodd et al. 1990:358).

Initially at least, the Late Woodland Period (AD 1400-1650) continues many of the trends which have been documented for the proceeding century. For instance, between AD 1400 and 1450 house lengths continue to grow, reaching an average length of 62 m. One longhouse excavated on a site southwest of Kitchener was an incredible 123 m (Lennox and Fitzgerald 1990:444-445). After AD 1450, house lengths begin to decrease, with houses dating between AD 1500 and 1580 averaging 30 m in length.

As to why house lengths decrease after AD 1450 is still being investigated, though it is understood that the shorter houses witnessed on Historical Period sites can be at least partially attributed to the population reductions associated with the introduction of European diseases such as smallpox (Lennox and Fitzgerald 1990:405, 410).

Village size also continues to expand throughout the Late Woodland Period, with many of the larger villages showing signs of periodic expansions. The middle Late Woodland Period and the first century of the late Late Woodland Period was a time of village amalgamation. One large village situated just north of Toronto has been shown to have expanded on no fewer than five occasions. These large villages were often heavily defended with numerous rows of wooden palisades, suggesting that defence may have been one of the rationales for smaller groups banding together. A pattern of Late Woodland village expansion has been clearly documented at several sites throughout southwestern and south-central Ontario (Anderson 2009).

Not all First Nations within southern Ontario resided within villages during the Late Woodland Period, as some communities continued to live in areas along waterways during the summer months and inland hunting sites during the winter.

Early contact with European settlers at the end of the Late Woodland Period resulted in changes to the traditional lifestyles of most Indigenous populations inhabiting Ontario including settlement size, population distribution, and material culture. The introduction of European-borne diseases significantly increased mortality rates, resulting in a drastic decrease in population size (Warrick 2000).

2.2 Post-Contact Indigenous Occupation of Southern Ontario

The post-contact Indigenous occupation of southern Ontario was heavily influenced by the dispersal of various Iroquoian-speaking peoples by the nations of the Haudenosaunee Confederacy, and the subsequent arrival of Algonkian-speaking groups from northern Ontario at the end of the 17th century and beginning of the 18th century (Schmalz 1991).

Following the introduction of Europeans to North America, the nature of Indigenous settlement size, population distribution, and material culture shifted as settlers began to colonize the land. Despite this shift, "written accounts of material life and livelihood, the correlation of historically recovered villages to their archaeological manifestations, and the similarities of those sites to more ancient sites have revealed an antiquity to documented cultural expressions that confirms a deep historical continuity to Indigenous systems of ideology and thought" (Ferris 2009:114). As a result, Indigenous peoples of southern Ontario have left behind archaeologically significant resources that show continuity with past peoples, even if this connection has not been recorded in historical Euro-Canadian documentation.

During the late 1600s and early 1700s, French explorers and missionaries reported a large population of Iroquoian peoples clustered around the western end of Lake Ontario. The part of this area that is now referred to as the Peel Region was known to have been populated by the ancestors of two Late Woodland groups who would become historically referred to as the Neutral (Attawandaron) and Huron nations.

2.3 Historical Euro-Canadian Period

2.3.1 Township of Caledon, County of Peel

The Study Area is located within part of the Mississauga Tract which was ceded to the British by the Mississaugas on the 28th of October 1818, under Treaty 19, for £522 and 10 shillings annually. Treaty 19 was the "Second Purchase" involving the Tract of which the "First Purchase" or "Mississauga Purchase" of 1805 allowed the British Crown to acquire over 74,000 acres of land in southern Peel County. Treaty 19 transferred an additional 648,000 acres of the Tract to the British who in 1819 surveyed the area and divided it into the townships of Toronto, Chinguacousy, Caledon, Albion and Toronto Gore (PAMA 2014).

Albion, Caledon and Chinguacousy Townships began settlement in 1820 with Caledon and Chinguacousy consisting of six concessions on both the east and west sides of Centre Road. According to George Walton's 1842 *Walton's Home District Directory*, the population of Caledon Township that year was 1,920. The 1870s saw the creation of railway lines east of the study area for the Credit Valley Railway (CVR) and Toronto Grey & Bruce Railway (both acquired by the Canadian Pacific Railway [CPR] in 1884). Caledon Township was bound on the east by Albion Township, on the south by Chinguacousy Township, on the west by Erin Township in the County of Wellington, and on the north-west by Garafraxa Township also in the County of Wellington (Lynch 1874).

Events in Europe during the mid-19th century dramatically improved the fortunes for Caledon Township and the surrounding county. A combination of failed harvests and disrupted trade routes caused by the Crimean War suddenly created a market for Canadian wheat producers, then centred in Ontario, to meet global demand. Simultaneously, the 1854 Canadian American Reciprocity Treaty prompted farmers to also take up livestock rearing for export to the United States (Scheinman 2009). Getting these products to consumers was aided by the new railway lines.

At the opening of the 20th century, economic development in Caledon Township, like that of adjacent counties and townships, relied on the prosperity of nearby Toronto and exports to the United States and Britain. Following World War II, the widespread use of motor vehicles brought changes to urban and rural development. As vehicular traffic increased, the network of roadways throughout the region improved, providing Caledon Township and its communities with better connections to the growing metropolis of Toronto.

Significant new growth and development has occurred in Peel County over the past four decades. When it became the Regional Municipality of Peel in 1974, Caledon Township along with Albion Township and the north half of Chinguacousy Township were incorporated into the new Town of Caledon. In that year, there were 334,750 people living in Peel Region and by 2014 the population numbered 1,350,000 (Neill 2015). The 2016 census recorded Peel's population at 1,381,739, of which 66,502 were residents of Caledon.

2.3.2 Study Area Specific Context

Though Location 2 (AkHa-24) is located exclusively within Part of Lot 15, Concession 4 WSCR, all lots within the Study Area are initially discussed below to aid in a comprehensive overview of the history of the lands surrounding the site. This is followed by a discussion of Lot 15, Concession 4 WSCR more specifically.

A review of historical county maps, topographic maps, and aerial imagery chart the 19th and 20th century development of the Study Area. The earliest cartographic resource consulted was George Tremaine's 1859 *Tremaine's Map of the County of Peel, Canada West* (Tremaine 1859) (Map 3). This map suggests the alignments for present-day Main Street and Mississauga Road are nearly identical to the original concession roads at that time. The 1859 map also depicts the Credit River east of the Study Area and branches of the Credit River flowing adjacent to the north portion of the Study Area (Map 3).

At the northeastern end of the Study Area, the 1859 map portrays the "Coulter Estate" while near the south end of the Study Area, the village of "Church's Falls" is visible. These appear to be the predecessors of the present-day communities of Coulterville and Cataract, respectively. Furthermore, two structures (likely farmhouses) are illustrated within the Study Area on the 1859 map (Map 3). The northwestern-most farmhouse is illustrated within the property of Duncan Cameron (Lot 17, Concession 4 WSCR) and appears to be situated in the same location as the present-day house at 18667 Mississauga Road. The southernmost farmhouse is illustrated within the property of James Cameron (Lot 16, Concession 4 WSCR) and appears to be situated in the same location as the present-day house at 18501 Mississauga Road.

Nearly two decades later, J.H. Pope's 1877 *Illustrated Historical Atlas of the County of Peel* (Pope 1877) depicts the Lot 16 side road as similar to the present-day alignment for Charleston Sideroad. Furthermore, the Credit River and its branches are portrayed as traversing similar paths to those of 1859 and the Coulterville Estate remains at the northeast end of the Study Area. Notable changes include the renaming of the village of Church's Falls (near the south end of the Study Area) to "Cataract" and the establishment of the CVR along the northeast perimeter of the Study Area (Map 3).

The 1877 map still illustrates the same two farmhouses shown in the 1859 map but also presents orchards adjacent to each structure. In addition to these two farmhouses, five new (or newly illustrated) individual structures are depicted in the Study Area on the 1877 map. The new individual structures include four labeled "residences" (farmhouses) and one "school house" as depicted in the 1877 map (Map 3).

From north to south, the first new farmhouse as well as the schoolhouse are located in Lot 16, Concession 3 WSCR, as part of the Coulter Estate, while the second new farmhouse is located in the east corner of Lot 16, Concession 4 WSCR, still listed as the property of James Cameron and situated near the location of the presentday house at 1420 Charleston Sideroad. The third new farmhouse also has an accompanying orchard and is located in the northeast half of Lot 15, Concession 4 WSCR, listed as the property of Thomas McNicholl, while the fourth new farmhouse is located in the southwest half of the same lot, listed as part of the Morris Estate and situated in the same location as the present-day foundation remnants at 1055 Charleston Sideroad (Map 3).

Available topographic maps and aerial images document the evolution of the Study Area during the 20th century. The 1937 and 1952 versions of the *Topographic Map*, *Ontario* – *Orangeville Sheet* by the Department of National Defence (Ontario Council of University Libraries [OCUL] n.d.) provide a more accurate representation of the waterbodies in the Study Area and suggest that branches of the Credit River flow through the west portion of the Study Area as well as to the east of the Study Area. The 1937 and 1952 maps also suggest that six of the seven farmhouses portrayed within the Study Area in 1877 (or versions of them) were still extant and, furthermore, were accompanied by associated barns and/ or outbuildings (Map 4). While the farmhouse on the former Coulter Estate appears to have been replaced with a structure closer to the Lot 16 side road, the schoolhouse on the former property is still illustrated and appears to be situated in the same location as the present-day house at 1626 Charleston Sideroad, just outside of the current Study Area. Another notable change from the 1877 map is the conversion of the former CVR to the CPR (a transition that occurred in 1884, see Section 1.2.3.1) (Map 4).

A 1954 aerial photograph by the Department of Lands and Forests (McMaster University Library 2023) presents the Study Area as identical to the previous topographic maps and confirms the majority of the Study Area remained rural agricultural land with tracts of woodlots interspersed throughout (Map 5). While the number of outbuildings/ barns have changed for the several farmhouses illustrated in the 1877, 1937 and 1952 maps, the main houses still appear to be extant within the Study Area on the 1973 map. Furthermore, Charleston Sideroad appears to have been modified to its present-day alignment and the CPR line remains visible on the 1973 map (Map 5). Though northern portions of the CPR line were decommissioned by 1996, the Brampton-Orangeville Railway was created in 2000 and has been operating freight traffic and a tour train on the line from Streetsville to Orangeville maintaining the use of the rail corridor near the Study Area to the present-day (Town of Caledon 2009).

2.3.2.1 Lot 15, Concession 4 WSCR

Lot 15, Concession 4 WSCR was originally wooded with maple, elm, beech, and bass, and the soil was a black loam (PAMA n.d., Reel 08, 0665). The patent for the 200-acre Lot 15 was granted to Joseph Brown Jr. in 1822 as

a United Empire Loyalist (U.E.L.) land grant (Ontario Land Registry, n.d.(a): 306). Joseph Jr. was one of five children (four sons and one daughter) of Joseph Brown, a U.E.L. who served in Butler's Rangers during the Revolutionary War and moved to Grantham Township, Lincoln County, Canada in 1784. All five of Joseph's children located their U.E.L. grants in Caledon West and were among the pioneers of the township (PAMA n.d., Reel 08, 0691).

Joseph Jr. and his wife sold the entirety of the lot in June 1847 to Solomon John Johnson Brown for £125; the relationship between these parties could not be definitively established. As of the 1851 Census, Solomon J. J. Brown (25) was resident in Niagara Township with his parents Joseph and Almira Brown, and five siblings, including a brother Henry J. (23) (1851 Personal Census, District 2, Caledon: 145). In March 1859, Solomon Brown transferred the east half of Lot 15 to Henry James Brown, likely his brother, by indenture of \$550. Tremaine's 1859 *Map of the County of Peel* shows the entire Lot 15 owned by the Estate of Jos. Brown, deceased, and no structures on the property (Tremaine 1859, Map 3).

The Brown-family owners of Lot 15 do not appear in the census records for Caledon Township. The 1861 Agricultural census shows the Lot in the use of two farmers, James McBrien, and Thomas McGoldrick. McBrien is listed as holder of 100 acres on Lot 15, with 35 under cultivation (26 wheat, 1 potato, and 8 pasture); McGoldrick is also listed as holder of 100 acres, with 40 under cultivation (20 wheat, 1 peas, 2 oats, 1 turnip, 1 potatoes, and 10 pasture). The estimated value of each hundred is \$1000 (1861 Agricultural Census, District 6, Caledon: 86). It is likely that Thomas McGoldrick was farming the east half of the lot, as he purchased that hundred from Henry James Brown and his wife for \$1000 in March 1862. In the same month, Solomon J. J. Brown and his wife sold the west half of Lot 15 to Joseph Morris for \$1000 (Ontario Land Registry, n.d.(a): 306).

The 1861 Census shows Joseph Morris (37), living with his wife Martha (37), and five children: Edward (15), Margaret (10), Elizabeth (8), William (6), and Joseph (4) (1861 Personal Census, District 6, Caledon, 77). At that time, Morris was farming Lot 17, Concession 5. Shortly after acquiring the west half of Lot 15, Concession 4 Joseph and Martha gave a mortgage on the property to William Barnard for \$200, possibly for construction of a residence. In April 1868, the couple transferred the property to their eldest son, Edward, for consideration of \$1 (Ontario Land Registry, n.d.(b), 431). Edward Morris married Elizabeth Jane McNichol, of Irish ancestry and born in Rockport, Niagara Township, United States (Find a Grave 2022). Elizabeth's brother, Thomas McNichol, purchased the east half of Lot 15 in two parts, the east part in 1862 and the west part in 1867.

The 1871 Census shows Edward Morris (25) and Eliza Jane (25) with one daughter, Sarah E. (2). The Morris' and McNichols were Presbyterian (1871 Census, Schedule 1, Cardwell 40/A, Caledon No.4, 44). Edward Morris is listed as the owner of 100 acres, with one house, and two barns/stables (Ibid., Schedule 3, 8). Of the 100 acres, 70 were identified as improved, including 39 wheat, ½ of potatoes, 29 hay, 8 pasture, and 1 orchard (Ibid., Schedule 4, 8). Other assets and products of the farm included 2 horses, 4 milch cows, 8 other horned cattle, 8 sheep, 7 swine, and yearly production of 300 pounds butter, and 32 pounds wood (Ibid., Schedule 5, 8).

The 1877 Historical Atlas map shows Edward Morris as the owner of the west half of Lot 15, Con. 4 WSCR (Pope 1877, Map 3). One structure is shown on the property, slightly to the northeast of the southwest corner of the property, adjacent to the sideroad. Eliza Morris died in 1888 at the age of 47. The 1891 Census shows Edward Morris still living in Caledon West with his daughter "Lizzie" (Sarah Elizabeth) (1891 Census, Schedule 1, Cardwell 54/D, Caledon, 82). The 1897 Tax Assessment shows Edward Morris, age 49, as owner of 100 acres at Lot 15, Con. 4, with 85 acres cleared, and an assessed value of \$3300 (PAMA 1897, Division 7, 43). Edward continued to own the west 100-acres of Lot 15 until he sold it in October 1911 to Arch. R. McArthur for \$8500 (Ontario Land Registry, n.d.(b), 431).

3.0 ARCHAEOLOGICAL CONTEXT

3.1.1 Existing Conditions

The Study Area is located in a rural part of the Town of Caledon, generally bounded by Mississauga Road to the south, the CP Railway to the north, the western edge of Lot 14, Concession 4 WSCR to the east, and the eastern edge of Lot 18, Concession 4 WSCR to the west. Charleston Sideroad, or Highway 24, is a northeast-southwest road that bisects the Study Area, with approximately two thirds north of the highway and one third to the south. The Study Area is comprised of active agricultural lands, wooded areas, overgrown farmland, including pasture and meadows, as well as residential lots and farm complexes. The Study Area is surrounded by farmland and wooded areas to the south and west, the TPC Toronto at Osprey Valley Golf Course to the north, and the hamlet of Cataract and Forks of the Credit Provincial Park to the east.

Location 2 (AkHa-24) is situated in the eastern portion of the Study Area within a residential lot and surrounding agricultural field. It is approximately 25 m southeast of Charleston Sideroad and 175 m northeast of Mississauga Road (Supplementary Documentation; Map SD1).

3.1.2 Physiography

The Study Area is situated entirely within the "Guelph Drumlin Field" physiographic region (Chapman and Putnam 1984:137).

The drumlins of this field are not so closely grouped as those of some other areas and there is more intervening low ground, which is largely occupied by fluvial materials. The till in these drumlins is loamy and calcareous, and was derived mostly from dolostone of the Amabel Formation so strategically exposed along the Niagara Cuesta...The till throughout is rather stony, with large surface boulders being more numerous in some localities than others...The ice which moulded this drumlin field advanced from the southeast and the front of the melting receding glacier was at right angles to this, that is, down slope of the plain. The drainage of the ice front was consequently able to find progressively lower and lower outlets, so that the drumlin field is furrowed by more or less parallel valleys running almost at right angles to the trend of the drumlins themselves. There are also numerous interconnecting cross valleys which occupy deeper depressions between drumlins. Along the sides of these valleys there are broad sand and gravel terraces, while the bottoms are often swampy...Incidental to this pattern are the several gravel ridges or eskers which cross the plain in the same general direction as the drumlins.

(Chapman and Putnam 1984:137-138)

The localized topography of the Study Area is generally flat and is approximately 390 to 420 m above sea level. The soils of the Study Area are comprised primarily of Dumfries Loam and Caledon Loam, with a small section of Gilford loam at the western extent. Dumfries soils consist of well drained dark gray-brown loam or sandy loam with a high stone content, commonly used for cultivation of cereal grains, legumes, hay and pasture (Hoffman and Richards 1953). Caledon and Gilford Loam is the poorly drained member. Caledon soils consist of very dark grey-brown loam and are used for the cultivation of cereal grains, hay and pasture. Gilford soils consist of very dark grey-brown loam and are primarily used for pastures and woodlots. These three soils tend to require additional fertilizer to maintain adequate organic matter levels, as well as mitigating the hazards of erosion and large stones to cultivation practices (Hoffman and Richards 1953).

The soil within Location 2 (AkHa-24) is comprised of comprised of Caledon loam with moderate compaction and 10-80% stone content.

The closest potable water source to Location 2 (AkHa-24) is an unnamed tributary approximately 480 m to the northwest. Location 2 (AkHa-24) is situated within the Credit River Watershed which spans 1,000 km² and drains into Lake Ontario at the Port Credit, Mississauga waterfront (Credit Valley Conservation 2022).

The bedrock deposits in the vicinity date to the Middle and Lower Silurian Periods and consist of the Lockport-Amabel Formation (Hewitt 1972). The Guelph-Lockport Dolomites form the cap of the Niagara Escarpment, outcropping from Niagara Falls though Dundas and Guelph up to the Bruce Peninsula. The Lockport Dolomites consists of three members: Gasport Dolimitic Limestone, Goat Island Dolomite and Eramosa Dolomite. Similarly, the Amabel Formation also consists of three members, including: a finer crystalline blocky dolomite named Lions Head Member, a fine to medium crystalline dolomite named Wiarton Member, and a brown, thin-bedded fine crystalline dolomite named Eramosa Member (Hewitt 1972).

The Study Area lies within the Mixed-wood Plains ecozone of Ontario (The Canadian Atlas Online 2015). Although largely altered by recent human activity, this ecozone once supported a wide variety of deciduous trees, such as various species of ash, birch, chestnut, hickory, oak, and walnut, as well as a variety of birds and small to large land mammals, such as raccoon, red fox, white tailed deer, and black bear.

3.1.3 Registered Archaeological Sites

To compile an inventory of previously documented archaeological resources, the registered archaeological site records maintained by the MCM in the Ontario Archaeological Site Database (OASD) was consulted.

A total of 12 registered archaeological sites are located within 1 km of Location 2 (AkHa-24), and all of these sites are situated within the current Study Area. One site, Location 12 (AkHa-29), is located within 300 m of Location 2 (AkHa-24). Section 3.1.4.2 below provides further details on the registered sites identified during the Stage 1 and 2 AA of the Study Area.

| Borden Number | Site Name | Affinity | Site Type |
|---------------|-------------|---|------------------|
| AlHa-9 | Cameron | Post-Contact | homestead, house |
| AkHa-34 | Location 27 | Post-Contact | agricultural |
| AkHa-33 | Location 26 | Pre-Contact Indigenous | scatter |
| AkHa-32 | Location 22 | Pre-Contact Indigenous; Early Woodland, Late Woodland | scatter |
| AkHa-31 | Location 18 | Post-Contact | agricultural |
| AkHa-30 | Location 16 | Pre-Contact Indigenous | scatter |
| AkHa-28 | Location 10 | Pre-Contact Indigenous; Early Archaic | findspot |
| AkHa-27 | Location 9 | Post-Contact | midden |

| Table 2: Registered archaeological sites within 1 km of Location 2 (| AkHa-24) |

**" denotes sites located within 300 m

3.1.4 **Previous Archaeological Assessments**

Per Section 1.1., Standard 1. of the MCM (Government of Ontario 2011), a review of previous archaeological assessments undertaken within the limits of the Study Area or within 50 m of the Study Area was undertaken. To WSP's knowledge, one previous archaeological assessment has been documented within the 50 m threshold and two previous archaeological assessments have been documented for the current Study Area.

3.1.4.1 Previous Assessments within 50 m of the Study Area

In 2017, Archaeological Research Associates Ltd. (ARA) conducted a Stage 1 and 2 AA of a study area approximately 0.51 ha in size to satisfy Infrastructure Ontario's due diligence requirements in advance of the planned disposition of the property. The study area for this assessment is adjacent to Charleston Sideroad to the north and is located centrally between portions of the current Study Area. The Stage 1 identified areas of archaeological potential and areas of previous disturbance, and the Stage 2 consisted of test pit survey at 5 m intervals that did not result in the identification of any archaeological locations. No further work was recommended for this property (ARA 2017).

3.1.4.2 Previous Assessments of the Study Area

In 2001, Archaeological Assessments Ltd. conducted a Stage 1 and 2 AA within the limits of the current Study Area, on part of the eastern halves of Lots 16, 17, and 18, Concession 4 WSCR, in advance of the proposed Osprey Valley West Golf Course. The size of the study area was approximately 89 ha, of which 69 ha was cultivated agricultural lands assessed by pedestrian survey at 5 m intervals, and 20 ha was mixed scrub and woodland assessed by test pit survey at 10 m intervals (Archaeological Assessments Ltd. 2001).

The Stage 1 and 2 AA resulted in the identification of three archaeological locations, including two pre-contact Indigenous findspots, and one historical Euro-Canadian homestead that was registered as the Cameron Site (AIHa-9). The first pre-contact Indigenous findspot consisted of a bifacially worked scraper and the second consisted of a large, finished biface, both manufactured on Onondaga chert. These two findspots were determined to have low cultural heritage value or interest, and no further archaeological assessments were recommended for either location (Archaeological Assessments Ltd. 2001).

The Cameron Site (AIHa-9) was identified during the pedestrian survey of a ploughed agricultural field, located in the northeastern portion of the east half of Lot 16, Concession 4 WSCR. The site measured approximately 27 m north-south by 75 m east-west and produced a total of 66 historical Euro-Canadian artifacts, primarily household ceramics and glass. The Cameron Site (AIHa-9) was interpreted as a mid-19th century Euro-Canadian homestead

occupied by the Cameron family until the early to mid-20th century. Historical archival research indicates that James Cameron occupied the site from the 1850s to 1870s, while the *1877 Historical Atlas Map of Caledon Township* (Map 3) indicates a structure in the northeastern corner of Lot 16 that corresponds to the same location as the Cameron Site (AlHa-9). As such, the Cameron Site (AlHa-9) was determined to have further cultural heritage value and interest and was recommended for Stage 4 mitigation if avoidance and protection was not possible (Archaeological Assessments Ltd. 2001).

Golder (now WSP) completed the Stage 1 and 2 AA for the current Study Area in the fall of 2020, and spring and summer of 2021 (Golder 2022). The results of the Stage 1 assessment identified archaeological potential within the Study Area for both pre-contact Indigenous and historical Euro-Canadian sites. This determination is based on the presence of well-drained soils, proximity to water sources such as the Credit River, as well as the proximity to registered archaeological sites (e.g., Cameron Site (AlHa-9) found in 2001) and areas of Euro-Canadian settlement dating back to the mid-19th century. Areas of archaeological potential within the Study Area were subject to survey during the Stage 2 AA through a combination of shovel test pit survey and pedestrian survey at 5 m intervals. The Stage 2 assessment resulted in the identification of 29 artifact producing locations, of which 18 are pre-contact Indigenous sites or findspots and 11 are historical Euro-Canadian sites. Of the 29 archaeological producing locations, a total of 15 (Locations 3, 5, 6, 8, 11, 14, 19, 20, 21, 23, 24, 25, and 28) consisted of either a small amount of historical material or a single piece of lithic debitage, biface or scraper. Given the isolated nature of the finds, these locations were concluded to have no further CHVI as the sites do not meet the criteria identified in Section 2.2, Standards 1a-c, of the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011) for determining the need for Stage 3 AA. Similarly, Location 29 was interpreted to be an isolated, intermixed deposit of historical and modern material, mostly consisting of wire-drawn and machine cut nails, and, as such, was considered sufficiently documented with no further CHVI. The remaining 13 sites (Locations 1, 2, 4, 7, 9, 10, 12, 15, 16, 18, 22, 26, and 27) were registered with the MCM, under the Borden system, in accordance with Section 7.12, Standards 1.a. and 1.c. of the MCM (2011) and will be discussed in further detail below.

Location 1 (AkHa-23) consisted of 1,561 historical Euro-Canadian artifacts, 69 faunal elements, and one piece of lithic debitage, recovered from 35 positive test pits, one 1 m² test unit, and 55 CSP points in an area measuring approximately 80 m by 75 m. Given that there were at least 20 artifacts that date Location 1 (AkHa-23) to before 1900, and the fact that the location of the site has been occupied since the mid- to late 19th century and may be associated with a nearby former structure and orchard on historical mapping, the site meets the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having cultural heritage value or interest (CHVI) and is therefore required to undergo Stage 3 AA. The single pre-contact Indigenous artifact was concluded to have no further CHVI as it does not meet the criteria Section 2.2, Standards 1a or b of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for requiring Stage 3 AA.

Location 2 (AkHa-24), the site to which this report pertains, consisted of 220 historical Euro-Canadian artifacts and 15 faunal elements, recovered from 26 positive test pits and 65 CSP points in an area measuring approximately 90 m by 60 m. Given that there were at least 20 artifacts that dated Location 2 (AkHa-24) to before 1900, and the fact that the location of the site has been occupied since the mid- to late 19th century and can be tied to a structure on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having CHVI and was therefore recommended to undergo Stage 3 AA.

Location 4 (AkHa-25) consisted of 32 historical Euro-Canadian artifacts and five faunal elements, recovered from recovered from 19 positive test pits in an area measuring approximately 45 m by 35 m. Given that there were at least 20 artifacts that date Location 4 (AkHa-25) to before 1900, and the fact that the location of the site has been occupied since the mid-19th century and can be tied to a nearby structure on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having CHVI and was therefore recommended to undergo Stage 3 AA.

Location 7 (AkHa-26) consisted of 248 historical Euro-Canadian artifacts and six faunal elements, recovered from recovered from 53 positive test pits in an area measuring approximately 70 m by 60 m. Given that there were at least 20 artifacts that dated Location 7 (AkHa-26) to before 1900, and the fact that the location of the site has been occupied since the mid-19th century and can be tied to a nearby structure on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having CHVI and was therefore recommended to undergo Stage 3 AA.

Location 9 (AkHa-27) consisted of 44 historical Euro-Canadian artifacts recovered from an area measuring approximately 35 m by 45 m. Given that there are at least 20 artifacts that dated Location 9 (AkHa-27) to before 1900, and the fact that the location of the site has been occupied since the mid- to late 19th century, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having cultural heritage value or interest (CHVI) and was therefore recommended to undergo Stage 3 AA.

Location 10 (AkHa-28) consisted of single Early Archaic Nettling projectile point (8000 - 6000 BC) (OAS 1980), manufactured on Haldimand chert. As Location 10 (AkHa-28) met the criteria identified in Section 2.2, Standard 1a and b of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011), it was concluded to have further CHVI and recommended for Stage 3 AA.

Location 12 (AkHa-29) consisted of 40 historical Euro-Canadian artifacts recovered from an area measuring approximately 35 m by 35 m. Given that there were at least 20 artifacts that date Location 12 (AkHa-29) to before 1900, and the fact that the location of the site has been occupied since the mid to late 19th century, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having CHVI and is therefore recommended to undergo Stage 3 AA.

Location 15 (AlHa-52) consisted of 208 historical Euro-Canadian artifacts and one faunal element, recovered from an area measuring approximately 45 m by 50 m. Given that there were at least 20 artifacts that date Location 15 (AlHa-52) to before 1900, and the fact that the location of the site has been occupied since the mid- to late 19th century, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having CHVI and was therefore recommended to undergo Stage 3 AA.

Location 16 (AkHa-30) consisted of nine pieces of lithic debitage recovered over an area measuring approximately 20 m by 25 m. As Location 16 (AkHa-30) met the criteria identified in Section 2.2, Standard 1a of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for requiring Stage 3 AA, it was concluded to have further CHVI.

Location 18 (AkHa-31) consisted of 771 historical Euro-Canadian artifacts, 58 faunal elements, and one piece of lithic debitage, recovered from 80 positive test pits and 100 CSP points in an area measuring approximately 95 m by 85 m. Given that there were at least 20 artifacts that date Location 18 (AkHa-31) to before 1900, and the fact that the location of the site has been occupied since the mid to late 19th century and can be tied to a structure and orchard on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having cultural heritage value or interest (CHVI) and was therefore recommended to undergo Stage 3 AA. The single pre-contact Indigenous artifact was concluded to have no further CHVI as it did not meet the criteria Section 2.2, Standards 1a or b of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for recommending Stage 3 site-specific assessment.

Location 22 (AkHa-32) consisted of 20 pre-contact Indigenous artifacts including 17 pieces of lithic debitage, two projectile points, and one utilized flake, recovered from an area measuring 20 m by 25 m. As Location 22 (AkHa-32) met the criteria identified in Section 2.2, Standard 1a of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for requiring Stage 3 AA, it was concluded to have further CHVI.

Location 26 (AkHa-33) consisted of five pieces of lithic debitage recovered over an area measuring 5 m by 5 m. As Location 26 (AkHa-33) met the criteria identified in Section 2.2, Standard 1a of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011), it was concluded to have further CHVI and recommended for Stage 3 AA.

Location 27 (AkHa-34) consisted of 109 historical Euro-Canadian artifacts and nine faunal elements, recovered from 19 positive test pits across an area measuring approximately 40 m by 30 m. Given that there are at least 20 artifacts that date Location 27 (AkHa-34) to before 1900, and the fact that the location of the site has been occupied since the mid- to late 19th century and can be tied to a structure on historical mapping, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having cultural heritage value or interest (CHVI) and was therefore recommended to undergo Stage 3 AA.

Based on the results of the Stage 1 and 2 AA conducted by Archaeological Assessments Ltd. (2001), the Cameron Site (AlHa-9) consisted of 66 historical Euro-Canadian artifacts recovered over an area measuring approximately 27 m north-south by 75 m east-west. Archaeological Assessments Ltd. recommended the Cameron Site (AlHa-9) be subject to Stage 3 AA and possibly Stage 4 Archaeological Mitigation. By the current *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011), at least 20 artifacts dated the Cameron Site (AlHa-9) to before 1900 and the location of the site had been occupied since the mid- to late 19th century and could be tied to a structure on historical mapping. As such, the site met the criteria identified in Section 2.2, Standard 1c and Table 3.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for having cultural heritage value or interest (CHVI) and was therefore recommended to undergo Stage 3 AA.

Based on the Stage 1 and 2 AA results, the following recommendations were provided (Golder 2022):

 Euro-Canadian sites, including Location 1 (AkHa-23), Location 2 (AkHa-24), Location 4 (AkHa-25), Location 7 (AkHa-26), Location 9 (AkHa-27), Location 12 (AkHa-29), Location 15 (AlHa-52), Location 18 (AkHa-31), Location 27 (AkHa-34), and the Cameron Site (AlHa-9) should be subject to Stage 3 Archaeological Assessment prior to any intrusive activity. The assessments should include researching all historical documentation sources listed Section 3.1 of the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011), as well as any additional relevant sources. Research should also incorporate available historical and municipal information for existing heritage structures or architectural remains that may be related to the archaeological site. Subsequent Stage 3 Archaeological Assessment fieldwork should begin with a controlled surface pick-up (CSP), if applicable, and if not previously done as part of the Stage 2 survey. With the exception of the Cameron Site (AlHa-9), all other Euro-Canadian sites requiring Stage 3 Archaeological Assessment were subject to a CSP as part of the Stage 2 survey. Stage 3 test unit excavation at each Euro-Canadian site should begin by following the standards for Rural Historical Farmsteads as outlined in the MTCS's bulletin 19th Century Rural Historical Farmstead Sites (MHSTCI 2021) and **Section 3.2.3 and Table 3.1, Standards 3-4**, of the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011). All fieldwork for the Stage 3 Archaeological Assessments should be completed in accordance with the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011).

- 2) Pre-contact Indigenous sites, including Location 10 (AkHa-28), Location 16 (AkHa-30), Location 22 (AkHa-32), and Location 26 (AkHa-33) should be subject to Stage 3 Archaeological Assessment prior to any intrusive activity. The assessments should consist of the hand excavation of 1 m² test units that are placed across the sites to meet the objectives outlined in Section 3.2.3 and Table 3.1, Standards 1-2, in the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011). Location 10 (AkHa-28), Location 16 (AkHa-30), and Location 22 (AkHa-32) were each subject to a CSP that met all requirements outlined in Section 3.2.1 of the MTCS's Standards and Guidelines for Consultant Archaeological locations is not required prior to Stage 3 test unit excavation. Location 26 (AkHa-33) was identified during test pit survey and does not require a CSP. All fieldwork for the Stage 3 Archaeological Assessments should be completed in accordance with the Standards and Guidelines for Consultant Archaeologists (Government of Ontario 2011).
- 3) Locations 3, 5, 6, 8, 11, 13, 14, 17, 19, 20, 21, 23, 24, 25, 28, and 29 as well as the pre-contact Indigenous components of Location 1 (AkHa-23) and Location 18 (AkHa-31) have been sufficiently assessed and documented, and no further archaeological assessment is recommended for these locations or components.
- 4) No further archaeological assessment is recommended for portions of the Study Area that were subject to Stage 2 Archaeological Assessment and no archaeological sites or resources were identified.
- 5) Until such time that Location 1 (AkHa-23), Location 2 (AkHa-24), Location 4 (AkHa-25), Location 7 (AkHa-26), Location 9 (AkHa-27), Location 10 (AkHa-28), Location 12 (AkHa-29), Location 15 (AlHa-52), Location 16 (AkHa-30), Location 18 (AkHa-31), Location 22 (AkHa-32), Location 26 (AkHa-33), Location 27 (AkHa-34), and the Cameron Site (AlHa-9) can undergo the recommended Stage 3 assessments, the sites should be avoided and protected by establishing 70 m "no-go" zones around the extent of each site as determined by the result of the Stage 2 Archaeological Assessment survey (Supplementary Documentation, Map 1, Tiles A-E).

Based on the proceeding recommendations, the *Aggregate Resources Act* Site Plans for the proposed Caledon Pit/Quarry were recommended to include the following conditions:

a) A Stage 3 Archaeological Assessment is required for the following sites: Location 1 (AkHa-23), Location 2 (AkHa-24), Location 4 (AkHa-25), Location 7 (AkHa-26), Location 9 (AkHa-27), Location 10 (AkHa-28), Location 12 (AkHa-29), Location 15 (AlHa-52), Location 16 (AkHa-30), Location 18 (AkHa-31), Location 22 (AkHa-32), Location 26 (AkHa-33), Location 27 (AkHa-34), and the Cameron Site (AlHa-9).

- b) The limits of these archaeological sites plus a 70 m buffer shall be identified on the site plans and referred to as an "Archaeological Protection Area".
- c) Alterations are prohibited within the limits of the "Archaeological Protection Area" until such time that the MTCS has entered a report(s) in the Ontario Public Register of Archaeological Reports where the report(s) recommends that the archaeological site is of no further cultural heritage value or interest.
- d) Any archaeological site that is of further cultural heritage value or interest that remains within the licenced area at the time of surrender of the licence will be protected through a restrictive covenant on title.
- e) The protected sites must be fenced (post and wire) prior to commencing extraction.

To the best of our knowledge, no additional archaeological assessments have been conducted within the limits of the current Study Area or within 50 m of the Study Area.

Information concerning specific site locations is protected by provincial policy and is not fully subject to the *Freedom of Information Act.* The release of such information in the past has led to looting or various forms of illegally conducted site destruction. Confidentiality extends to all media capable of conveying location, including maps, drawings, or textual descriptions of a site location. For this reason, maps and data that provide information on archaeological site locations are provided as supplementary documentation and do not form part of this public report.

The MCM will provide information concerning site location to the party or an agent of the party holding title to a property, or to a licensed archaeologist with relevant cultural resource management interests.

4.0 STAGE 3 METHODOLOGY

4.1 Field Methodology

The Stage 3 AA of Location 2 (AkHa-24) was conducted on July 12-15 and November 14-15, 17, 21-22, 2022, under archaeological consulting license P364 issued to Michael Teal of WSP by the MCM (P364-0202-2022). Nicole Gavin (P1288) and Rebecca Parry (P1013), delegated licensed archaeologists for WSP, assumed responsibility of undertaking the archaeological fieldwork at the site as per Section 12 of the MCM' 2013 *Terms and Conditions for Archaeological* Licences, issued in accordance with clause 48(4)(d) of the *Ontario Heritage Act* (Government of Ontario 1990b).

The weather during the assessment was variable (see Table 3). At no time were the conditions detrimental to the observation or recovery of archaeological material.

| Date | Temperature | Weather Conditions | Licensed Supervisor |
|------------------|-------------|---------------------------------------|---------------------|
| July 12, 2022 | 22°C | Partly cloudy | Nicole Gavin |
| July 13, 2022 | 23°C | Sunny | Nicole Gavin |
| July 14, 2022 | 25°C | Sunny | Nicole Gavin |
| July 15, 2022 | 27°C | Sunny | Nicole Gavin |
| November 14 2022 | 3°C | Overcast | Rebecca Parry |
| November 15 2022 | 0°C | Overcast, intermittent light flurries | Rebecca Parry |
| November 17 2022 | 0°C | Overcast, partly cloudy | Rebecca Parry |
| November 21 2022 | 3°C | Overcast, partly cloudy | Rebecca Parry |
| November 22 2022 | 2°C | Overcast | Rebecca Parry |

Table 3: Weather During the Stage 3 Site-Specific Assessment of Location 2 (AkHa-24)

Photo locations are illustrated on Map 6. All activities undertaken during the assessment were in compliance with the *Ontario Heritage Act* (Government of Ontario 1990b) and the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011).

All coordinates and elevations for the Stage 3 AA were collected with a Trimble Geo7x Global Navigation Satellite System (GNSS) unit with a Zephyr-2 receiver using the UTM NAD 83 (Zone 17) datum and coordinated within the Cansel network (Can-Net) for base station references. The collected coordinates are provided as a six-digit easting with three decimal places, and a seven-digit northing with three decimal places. As the coordinates are a fixed spatial position, each survey observation can be considered a permanent and known datum point regardless of any future disturbance to the location of each observation. The GNSS receiver is a dual frequency differential GPS (DGPS) capable of real time kinematic (RTK) corrections within the Can-Net Virtual Reference Station (VRS) network. The collected coordinates provide real time accuracy between 1 to 3 cm.

Location 2 (AkHa-24) was relocated from the original Stage 2 assessment data collected from a combination of pedestrian survey and shovel test pit survey. As a controlled surface pickup (CSP) that met all requirements outlined in Section 3.2.1 of the MCM's *Standards and Guidelines for Consultant Archaeologists* (Government of

Ontario 2011) was conducted for the ploughed field portion of Location 2 (AkHa-24) as part of the Stage 2 assessment, the Stage 3 assessment began with test unit excavations. Location 2 (AkHa-24) was identified as a as post-contact artifact scatter that spans a 60 m (N-S) by 90 m (E-W) area, and as such, the Stage 3 excavation strategy of test units followed Section 3.2.2, Standards 1-12 of the MCM's Draft *19th Century Rural Historical Farmstead Sites: Standards for Consultant Archaeologists* (Draft RHF Standards) (Government of Ontario 2021). The Stage 3 AA of Location 2 (AkHa-24) piloted the Draft RHF Standards as the fieldwork occurred during the 2022 pilot period. A 10 m excavation grid was placed over the Stage 2 artifact scatter, and additional test units, amounting to 40% of the initial grid unit total, were placed and excavated in areas of interest within the site. The grid was established across the extent of the site, as determined by the Stage 2 surface finds and positive test pits (Map 6). The grid squares are referred to by the intersection coordinates of their southwest corner. Each 5 m² set was further subdivided into 25 1 m² units, with sub-square number one located in the southwest corner of the 5 m² set, number five in the southeast corner, number six located immediately north of number one, and so on.

Each 1 m² test unit was excavated to ploughzone topsoil-subsoil interface which was then shovel shined and examined for evidence of subsurface cultural features prior to excavation to a depth of 5 cm into the subsoil. A test pit ("sondage") was excavated in each unit to confirm that the identified subsoil horizon did not represent a fill layer under which cultural or natural topsoil layers were present. All soil was screened through 6 mm hardware cloth to facilitate the recovery of small artifacts (Image 1 and Image 3). The Stage 3 excavation of Location 2 (AkHa-24) consisted of 32 grid units and 13 infill units for a total of 45 Stage 3 test units across an area measuring 60 m (N-S) by 80 m (E-W) (Map 6; Supplementary Documentation, Map SD1). Four subsurface cultural features were identified during the Stage 3 AA (see Section 5.2 below). All features were recorded, drawn, and photographed before being covered with geotextile and backfilled. All other Stage 3 test units were backfilled upon completion (Image 4).

All excavated artifacts were recorded with reference to their unit provenience and retained for laboratory analysis and description, as per Section 6.0 of the *Standards and Guidelines* (Government of Ontario 2011).

4.2 Artifact Analysis and Curation Methodology

This report and the following artifact inventory (Appendix A) provide a record of the artifacts and sampled material recovered from Location 2 (AkHa-24) provide the basis for interpretation of the site. This report aims to offer enough artifact information that a future researcher may determine whether the site is of relevance to their investigation.

4.2.1 The Artifact Inventory System

The artifact inventory was compiled on a Microsoft Access for Microsoft 365 MSO (Version 2202) database.

Each entry in the database contains the following information about a single artifact, or group of artifacts that all fit the same description:

- An individual inventory identification number,
- The spatial location (provenience) within the study area/site (unit, stratum/lot) from which the artifact(s) came,
- The artifact(s) analysis, and,
- The quantity of the entry (how many artifacts).

4.2.2 Artifact Analysis

The artifact analysis was based upon the MCM's standard requirements, as set out in Tables 6.1 and 6.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011). Every artifact entry in the database includes material composition, artifact type (object), and the function which it served and if any alterations had been made to the original artifact (e.g., burning). Additional artifact descriptions are based upon the type of artifact (see below).

4.2.3 Euro-Canadian Artifacts

Only Euro-Canadian artifacts and items dating to the 20th century were found during this investigation, including ceramic objects, glass items, and other inorganic and organic cultural objects (metal, stone, flora, fauna). Ceramic ware and glaze types were provided, as well as their decoration and colours. When a maker's mark was visible it was recorded. Date ranges were provided where possible, and the reference cited. Glass artifact colours and decorative patterns were recorded, in addition to technique of manufacture when identifiable. As with ceramic material, when a marker's mark was visible it was recorded.

Date ranges were provided where possible, and the reference cited. All other artifacts were described in as much detail as possible including surface treatment, decorative pattern, and technique of manufacture when identifiable.

4.2.4 Artifact Storage and Curation

The artifact collection was packed for storage by spatial location (provenience). When inventoried, artifacts were bagged in transparent, re-sealable (zippered) polyethylene bags which are inert and moisture resistant. The contents of each artifact bag were identified on archival quality labels (acid-free, non-yellowing, acrylic adhesive), with an archival ink which is permanent and fade resistant. The artifact bags were then placed in a banker's box (12" W x 15" D x 10" H).

Artifact collections are stored in the London office archaeology lab, until the report has been submitted to the MCM, after which they will be moved to a secure, indoor, climate-controlled storage facility. This collection contains 4,183 artifacts and is packed in two standard size banker's boxes.

5.0 RECORD OF FINDS

The Stage 3 AA of Location 2 (AkHa-24) was conducted employing the methods described in Section 4.1. Map 6 illustrates the areas assessed and the method employed, while Image 1 to Image 4 illustrate the conditions during the Stage 3 fieldwork.

The UTM coordinates are listed in the Supplementary Documentation that accompanies this report separately.

The Supplementary Documentation also contains mapping that illustrates the specific locational information of Location 2 (AkHa-24) (Map SD1).

Artifacts recovered from the Stage 3 AA of Location 2 (AkHa-24) have been washed, catalogued, and analyzed, and are stored in two banker's boxes at WSP's office in London, Ontario. Table 4 provides an inventory of the documentary record generated in the field, and a complete catalogue of all artifacts recovered during the Stage 3 AA of the site is provided below in Appendix A.

Table 4: Inventory of Documentary Record

| Document Type | Current Location of Document | Additional Comments |
|-------------------------|------------------------------|---|
| Field Notes | WSP Office in London | 17 pages from original field notebook. Hard copies stored in project folder and digitally in project file. |
| Hand Drawn Maps | WSP Office in London | One from original field notebook. Hard copy stored in project folder and digitally in project file. |
| Maps Provided by Client | WSP Office in London | One map stored in project folder and digitally in project file. |
| Digital Photographs | WSP Office in London | 62 photos stored in project folder and digitally in project file. |

5.1 Stratigraphy

Stratigraphy at Location 2 (AkHa-24) typically consisted of dark brown silt loam topsoil (Lot 1), over subsoil (Lot 2) that varied between a light to medium yellow-brown sandy silt and/or a reddish-brown sandy silt. The topsoil consistently exhibited 10% gravel and cobble inclusions, while the subsoil exhibited varying amounts of gravel and cobble inclusions, approximately 40-80%. Test units ranged from 25 cm to 46 cm in depth (Image 5 and Image 6).

5.1.1 Disturbance

Five of the Stage 3 units, including 420E 555N:25, 425E 560N:1,420E 555N:25, 430E 555N:1, and 425E 550N:1, exhibited fill deposits over subsoil, which demonstrated evidence of deep ground disturbance. The fill deposits are likely related to the demolition of a farmhouse within Location 2 (AkHa-24) as the five units were situated within or at the southeastern extent of the previous house footprint, which is visible in aerial imagery from 2001 (Map SD2, Supplementary Documentation) (Town of Caledon 2022). Units 420E 555N:25 and 425E 560N: 1 revealed compact and rocky dark grey-brown silty loam fill down to a large piece of a concrete foundation (Image 7). The

piece of concrete foundation was observed at 49 cm below surface in unit 425E 560N: 1 and 35 cm below surface in unit 420E 555N:25. Unit 430E 555N:1 exhibited similar rocky fill deposits which alternated between dark greybrown silt loam and light to medium yellow brown silty sand from 0 to 84 cm below surface and a reddish-brown silty sand from 84 to 122 cm below surface (Image 8). Unit 425E 545N: 1 exhibited medium dark brown sandy loam fill over light to medium yellow brown silty sand fill, culminating in an immovable layer of rocks and patio stones connected by metal rebar at 56 cm below surface (Image 9). Lastly, unit 425E 550N:1 exhibited dark greybrown silty loam fill over natural subsoil, with patio stones and metal rebar evident in the unit walls at the interface of the fill and subsoil (Image 10). The demolition fill deposits yielded 1,096 historical Euro-Canadian artifacts, 100 20th century items, and 62 faunal elements, which will be briefly discussed in Section 5.3.3.1 below. Artifacts recovered from these five units were recovered from a disturbed context and, as such, were inventoried separately from the intact portion of the site and omitted from the overall analysis of Location 2 (AkHa-24).

5.1.2 Fill-Capped Barn Ramp/Driveway Area

There were two units located between a raised earthen barn ramp and a gravel driveway that exhibited fillcapping over natural soils. Units 425E 520N: 1 and 430E 520N: 1 exhibited 28 to 35 cm thick caps of gravelly medium-dark brown silty loam fill deposits, respectively (Image 11). A total of 41 artifacts were recovered from the fill of unit 425E 520N: 1 while 22 artifacts were recovered from the fill of unit 430E 520N: 1. Only unit 430E 520N: 1 yielded artifacts from the buried topsoil below. Artifacts recovered from the fill deposits of these two units are out of context and, as such, were inventoried separately from the intact portion of the site and omitted from the overall analysis of Location 2 (AkHa-24).

5.2 Subsurface Features

A total of four subsurface cultural features were identified during the Stage 3 AA of Location 2 (AkHa-24). Each is described separately below.

Feature 1 was identified in test unit 425E 570N: 1 at 28 to 38 cm below surface. The feature consists of a portion of ceramic drainage pipe that extends through the northeast half of the unit (Image 12). The pipe is located immediately northeast of the previous house footprint. Feature 1 is attributed to either the historical occupation or modern land-use of the site.

Feature 2 was identified in test unit 420E 545N: 1 at approximately 15 cm below surface. The feature fill was observed to be medium to dark grey-brown gravelly silt loam that initially covered the entire unit floor from 15 cm to 24 cm below surface. By 24 cm below surface, Feature 2 became visible as a linear deposit that extends from the northwest corner of the unit centrally into the eastern wall (Image 13). The feature fill yielded 78 historical Euro-Canadian artifacts, two 20th century items, and six faunal elements. Feature 2 was interpreted as an indeterminate linear pit or trench feature related to the historical occupation or modern land-use of the site. Furthermore, Feature 2 is located immediately adjacent to the western side of the previous house footprint.

Feature 3 was identified in test unit 400E 515N: 1 at 25 cm below surface. The entirety of the circular feature was visible in the unit floor, slightly east of centre. The feature fill consisted of very dark brown silty sand (Image 14). No artifacts were recovered from the deposit. Feature 3 was interpreted as a possible post mould, likely of historical affiliation or related to modern land-use of the site.

Feature 4 was also identified in test unit 400E 515N: 1 at 25 cm below surface. The portion of the feature that were visible in the unit floor was irregular in shape and situated in the southwest corner of the unit. The feature fill consisted of dark brown silty loam with a cluster of large cobbles (Image 15). No artifacts were recovered from

trowel scrapings of the deposit. Feature 4 was interpreted to be an indeterminate pit feature of possible historical cultural affiliation or related to modern land-use activities.

5.3 Artifact Assemblage

A total of 4,183 artifacts were found during the Stage 3 AA of Location 2 (AkHa-24). Of these, 2,962 were found from an intact context and 1,221 were found from a disturbed, fill context. The number of artifacts per test unit is provided on Map 6. The assemblage from an intact context includes 2,547 historical and 20th century Euro-Canadian artifacts, and 415 faunal elements.

A total of 1,221 items were recovered from fill layers in test units found to be previously disturbed during the Stage 3 AA, including 1,055 historical Euro-Canadian artifacts, 101 20th century artifacts, and 65 faunal elements. Due to their disturbed context, artifacts recovered from fill are not discussed in detail below or presented in the succeeding analysis and conclusions section.

5.3.1 Historical and 20th Century Euro-Canadian Artifacts – Intact Context

The historical and 20th century Euro-Canadian artifacts are summarized by function in Table 5 and detailed in the following sections.

| Function | # of Artifacts |
|-------------------|----------------|
| arms/ammunition | 2 |
| food/beverage | 536 |
| fuel | 24 |
| furnishing | 25 |
| indeterminate | 595 |
| personal/societal | 57 |
| structural | 1,255 |
| tools/equipment | 52 |
| transportation | 1 |
| Total | 2,547 |

5.3.1.1 Structural Artifacts

Approximately 42% of the artifacts from Location 2 (AkHa-24) have a structural function, including artifacts identified as building components or building hardware. Building component artifacts include red brick, drainpipe, tile, mortar, concrete, and sherds of windowpane glass.

Building hardware includes two butt hinges and a latch hook. A total of 1,063 nails were inventoried: 806 of a common length, 231 of a lath length, and 26 of an indeterminate manufacture (Image 15). Nail manufacture type is shown in the table below.

Table 6: Nail Types

| Nail Type | Quantity |
|---------------|----------|
| cut | 397 |
| indeterminate | 56 |
| wire | 608 |
| wrought | 2 |
| Total | 1,063 |

There were three methods of nail manufacture that developed over time as the industry grew and became more mechanized. The first nails were hand wrought. Machine cut nails became available after 1800, when a nail cutting machine became of practical use (Vincent 1993, p. 159). By the 1830s, machine cut nails had mostly replaced wrought nails in common use (Vincent 1993, p. 163). Wire nails eventually replaced machine cut nails. They were first introduced in the 1860s but did not become common until the late 1880s to early 1890s (Miller et al 2000; Wells 2000). By 1900, wire nails were the most common nail type sold in North America and had largely taken over the nail market by 1920 with cut nails only making up about 8% of the nails being produced (Wells 2000: 327).

5.3.1.2 Indeterminate Function Artifacts

A total of 595 artifacts were inventoried as indeterminate due to their generalized functions. This included 49 hardware items such as bolts, screws, spikes, staples, tacks, washers, and a cotter pin. The one datable artifact includes a Robertson screw (Image 16) which was invented in 1908 (Soniak 2011). Glass sherds include bottle sherds (43), sherds that could not be identified beyond holloware (110) and altered sherds due to heating/melting (30). A total of 14 manganese glass sherds were identified. Manganese glass was commonly used for containers by 1890 (Lockhart 2006:54). Other indeterminate artifacts include miscellaneous metallic material included fragments of bar, foil, sheet, strap, and wire.

5.3.1.3 Food/Beverage Artifacts

A total of 536 artifacts were determined to have a food/beverage function. As seen in the table below, food/beverage function artifacts were further divided into more specific function categories.

| Table 7: Food/Beverage Art | ifacts by Secondary Function |
|----------------------------|------------------------------|
|----------------------------|------------------------------|

| Secondary Function | Quantity |
|--------------------|----------|
| beverage container | 71 |
| food container | 140 |
| food waste | 57 |
| storage container | 24 |
| tableware | 244 |
| Total | 536 |

Approximately 46% of the food/beverage artifacts had a tableware function. Tableware artifacts were mainly ceramic, but also included some glassware (Image 17). One sherd of manganese glass was inventoried as stemware and Lynn glass which was tooled to produce horizontal ribs or grooves (Jones & Sullivan 1989:53). One tumbler was identified as decorated with flutes. Four sherds of opaque, pale green glass were identified as Jadeite, which was marketed in the 1920s (Alice 2013:3).

Ceramic artifacts included sherds from cup/mugs, plates, saucers, teacups, teapots, and a creamer. The creamer is decorated with a blue, repetitive patterned edge, as well as blue transfer printed body. Tableware ceramics often provide the best evidence for dating artifact assemblages as they change more often than other artifacts, according to popularity trends. Basic ceramic tableware decoration types are summarized in Table 8 and representative examples of the decoration types found are shown in Image 18. Relevant date information is stated, where available. Decoration types that are starred include further detail below.

| Decoration Type | Quantity | Date | Reference |
|---|----------|--|-----------------------|
| decal: overglaze | 3 | Post 1890s | Huddleson 2013:616 |
| decal: underglaze | 1 | Post 1910s | Huddleson 2013:618 |
| dyed body | 2 | late 19th century to present | Richardson 2013 |
| edged: unscalloped, impressed, repetitive patterns | 3 | 1840s to 1860s | Miller 2013:489 |
| glaze: jackfield-like | 1 | revival in the 1870s to 1880s | MACL 2002 |
| hand painted: blue | 5 | c. 1815 to 1830 | Samford & Miller 2002 |
| hand painted: late palette | 7 | became common in the 1830s and remained so until the 1870s | Samford & Miller 2002 |
| industrial slip | 3 | Introduced in the 18th century | Sussman 1997:1 |
| moulded* | 34 | 1840s to 1900 | Samford & Miller 2002 |
| sponged (closely spaced, dabbed colour) | 1 | common from the 1820s to the 1860s, most popular in the 1830s | Samford 2013:500 |
| sponged: cut | 3 | 1860 to 1935 | Samford 2013:502 |
| transfer printed* | 18 | 1820 to 1840 was the period of peak production | Little 1969:15 |

| Table 8: Ceram | c Tableware | Decoration | Types |
|----------------|-------------|------------|-------|
|----------------|-------------|------------|-------|

Moulded

Moulded tableware decoration dates from the 1840s to 1900 (Samford & Miller 2002). Decoration types that could be identified included geometric (flutes, panels), and harvest (Wheat Pattern). Geometric patterns often date from the 1840s to 1850s (Samford & Miller 2002), while the Wheat Pattern was patented in 1848. The Wheat Pattern's peak period of production was from the 1870s to the 1880s (Sussman 1985:7).

Transfer Printed

Transfer print as a ceramic decoration began in 1750s and was developed by John Sadler and Guy Green of Liverpool. It was then adopted by Josiah Wedgwood who brought the technique into the mainstream, achieving huge popularity. Transfer printing is a process by which a pattern or design is etched onto a copper (or other metal) plate. The plate is then inked, and the pattern is "transferred" to a special tissue. The inked tissue is then laid onto a bisque fired ceramic item, glazed, and fired again. Transfer print decoration was produced in blue, which remains the most popular colour used, as well as other colours. The peak production date of blue transfer print is noted in the table below. Other colours identified in the assemblage included black, green, and red, which all went through periods of popularity.

Table 9: Transfer Printed Ceramic Dates

| Date | Reference |
|--|-----------------------|
| technique invented c. 1753 (overglaze) | Kybalova 1989:212 |
| 1783 first underglaze printed patterns | Shaw 1829 |
| 1820 to 1840 was the period of peak production | Little 1969:15 |
| declined in popularity in 1850s | Miller 1991: 9 |
| revival in the 1870s | Samford & Miller 2002 |
| produced into the early 20th century | Samford 1997:18 |
| black, peak production 1825 to 1838 | Samford & Miller 2002 |
| blue, peak production 1817 to 1848 | Samford & Miller 2002 |
| green, peak production 1832 to 1850 | Samford & Miller 2002 |
| red, peak production 1829 to 1842 | Samford & Miller 2002 |

Manufacturers Marks

A British Royal Coat of Arms mark was inventoried (Image 19). The Royal Arms mark dates post-1795 but was most common after 1830 (Godden 1988, p. 33). An indeterminate maker's mark was identified on a saucer fragment with the partial word "(porc)elain". A green transfer mark 'SUPR..' may represent the title of the decorative pattern rather than a maker's mark.

Beverage Container

Beverage container artifacts include 63 glass sherds of soda, wine, and general alcohol bottles (Image 20). A total of 18 bottle sherds were identified as machine made. The production of narrow-mouthed and machine-made containers began in 1889 (Miller & Sullivan 1991:110). A total of 15 lime green sherds were also inventoried and were likely all soda bottles. The lime green colour is almost exclusively used in the 20th century and beyond (Lindsey 2021).

One alcohol bottle fragment exhibited a single white enamel line. Enamel labelling or applied colour labelling (acl) was first used in the 1930s (Lockhart & Brown 2019).

Another soda bottle was embossed with "10 OZ"; volume information generally dates to post 1913 (Lindsey 2021).

A total of 16 crown caps were inventoried. Crown caps provided a date of post-1892 when they were patented (Jones & Sullivan 1989:163). Two of the caps had plastic liners, which replaced cork liners in the mid-20th century (Lindsey 2021). A total of two pull tab closures were recovered, which were introduced in 1962 (Busch 1991:193). Five plastic removable lids fragments were inventoried. The first patented coffee lid was invented in 1934 and was used for cold drinks. In 1950, the first removable lid was introduced but did not contain a drinking mouth though, by 1967, the first removeable lid with a tab that could be pulled open for drinking was invented (Zhiben Environmental Protection Technology Group Co.).

Food Container

Food container artifacts include sherds of coarse red earthenware holloware, with the exception of on wide mouth sauce/condiment bottle (Image 21).

Food Waste

A total of 57 artifacts were determined to be food waste, all of which were fragments of butchered mammal bone.

Storage Container

Multiple glass jars were identified including six sherds from glass jar liners. In addition, seven fragments of metal screw-band lids were inventoried (Image 21).

5.3.1.4 Personal/Societal Artifacts

Personal/societal artifacts can be further divided into the more specific categories including adornment, clothing, commerce, footwear, health/hygiene, recreation, and smoking (Image 22 and Image 23). Adornment artifacts include two glass beads and a small iron jewellery clasp. Clothing artifacts include 35 buckles, buttons, and clothing fasteners (Image 22). Button materials are varied and include ceramic, bone, shell, glass, iron and synthetic. Two ceramic (porcelain) buttons are Prosser manufactured, indicating that they date to post-1840 (Sprague 2002:111). One is white, the other one is a more unusual black. There is also another plain black glass button. Black coloured buttons and jewellery became fashionable in 1861 when Queen Victoria was seen wearing jet mourning jewelry after the death of Prince Albert (Antiques Roadshow 2008:274). Other clothing fasteners included eyelets, grommets, safety pins, and rivets. Safety pins were patented (US Patent 6281A) in 1849 as a "Dress-Pin" by Walter Hunt of New York (Google Patents). This type of metal clothing rivet was patented in the United States of America in 1873 (Levi Strauss & Co.). Nine fragments of iron corset busk were also identified.

Commerce artifacts include two United States of America pennies with dates of 1946 and 1960 (Image 23). Health/hygiene artifacts include 13 sherds from small bottles. One panel bottle is manganese glass with embossed lettering "..S/ ..ION". A Bakelite comb fragment and a toothpaste tube marked "PEPSODENT CO CHICAGO" were also identified (Image 23). Bakelite was patented in 1909 (Hillman 1986:24) while Colgate introduced toothpaste in a tube, rather than a jar, in the 1890s (Colgate).

A total of 4 smoking related artifacts were inventoried including three white clay smoking pipe fragments, and a composite pipe's Bakelite mouthpiece (Image 23).Recreation artifacts included a small plastic ball or marble.

5.3.1.5 Tools/Equipment Artifacts

A total of 53 artifacts were identified with a tools/equipment function. This function category is broad and can be further broken down into the functional categories of agriculture, cleaning, horse related, and writing.

Agricultural artifacts include sherds of coarse red earthenware flowerpot and two possible spiles for collecting maple syrup. Cleaning artifacts include the springs from five clothes pins (Image 24). These steel springs, used with wood prongs, were patented in 1887 (Miller 2000:15). Horse-related artifacts include a harness bell, a snap hook, and a possible whippletree ring/hook, as well as three machine cut horseshoe nails (Image 25). Writing artifacts include two glass ink well sherds and six modern pencil fragments.

Three carbon battery core fragments were inventoried (Image 24). In 1866, Georges-Lionel LeClanche created the first wet celled battery which was improved by Carl Gassner to create the first dry-cell battery in 1888 (MSU Campus Archaeology Program 2018). Carbon rods were found in the centre of zinc-carbon batteries.

5.3.1.6 Furnishing Artifacts

A total of 24 furnishing artifacts were identified (Image 26), including 24 glass lamp chimney fragments. Some of the lamp chimney fragments are crimped on their upper rim. Lamp chimneys with a decorated upper rim were rare in Canada before circa 1885 (Woodhead, Sullivan & Gusset 1984:62). A lightbulb base was inventoried; lightbulbs became available circa 1875 (Canada Science and Technology Museum 2013).

5.3.1.7 Fuel Artifacts

A total of 24 fuel artifacts were recovered at Location 2 (AkHa-24), all of which were pieces of coal.

5.3.1.8 Arms/Ammunition and Transportation Artifacts

A total of two copper alloy .22 cartridges were found at Location 2 (AkHa-24) (Image 27). Metallic cartridges were not widely used until the 1860s (Heard 2008:336). Cartridges of the .22 calibre were introduced in 1871 (Bradley 2008:5).

The single transportation artifact was a possible headlight bulb from a vehicle (Image 27).

5.3.2 Faunal Elements

A total of 415 indeterminate faunal elements were recovered from Location 2 (AkHa-24). The faunal assemblage includes 321 indeterminate fragments of mammal bone, 71 indeterminate fragments of avian bone, 22 indeterminate fragments of mammal dentition, and one shell fragment. Of the 321 fragments of mammal bone, 63 were found to be heat altered/calcined.

5.3.3 Artifacts – Disturbed Fill Context

5.3.3.1 Disturbed House Footprint Area

As described above in Section 5.1.1, a total of 1,158 items were recovered from demolition fill in five test units observed to be disturbed during the Stage 3 AA of Location 2 (AkHa-24). This includes 1,096 historical Euro-Canadian artifacts, 100 20th century items, and 62 faunal elements (Map 6). The fill deposits found within these units are likely a result of the demolition of the farmhouse, as they are located within or at the southeast edge of the previous house footprint.

To summarize, the historical Euro-Canadian assemblage recovered from the demolition fill consisted primarily of structural items (n=608), most of which are common nails, windowpane shards, mortar and brick, followed by

lesser amounts of indeterminate metal and glass artifacts (n=220), food and beverage related artifacts (n=106), tools and equipment artifacts (n=18), personal/societal artifacts (n=14), fuel-related artifacts (n=12), furnishing artifacts (n=12), and arms/ammunition cartridges (n=6). The 20th century items recovered include mostly synthetic and composite material items, as well as several asphalt shingles. A total of 62 faunal elements, or fragments thereof, were recovered from the demolition fill including mammal and avian bone fragments. Overall, the assemblage recovered from the demolition fill context is similar in composition to the site's assemblage, which suggests that these items were once associated with Location 2 (AkHa-24) before the demolition event.

5.3.3.2 Fill-Capped Barn Ramp/Driveway Area

As described above in Section 5.1.2, a total of 63 items were recovered from fill capping found in two test units during the Stage 3 AA of Location 2 (AkHa-24) (Map 6). To summarize, the historical Euro-Canadian assemblage from the fill deposits is primarily structural items (n=45), most of which were common nails, followed by lesser amounts of indeterminate artifacts (n=8), food/beverage related artifacts (n=3), and a personal/societal item. Three mammal bone fragments and a single 20th century soda bottle sherd complete the assemblage recovered from the area of fill capping between the barn ramp and gravel driveway.

5.4 General Site Distribution – Intact Context

The frequency of artifacts across Location 2 (AkHa-24) is shown on Map 6 and Map 7. The site is primarily located in a vacant residential lot that has been continuously occupied since the mid- to late 19th century, up until approximately the year 2000. The largest concentration of material is located immediately southeast of the previous farmhouse footprint, between the former area of the house and the historic barn ruins and extant shed. The number of artifacts recovered from these units generally varied between 80 and 180 artifacts, with one unit, 435E 540N: 1, yielding the highest count for the site at 588 total artifacts. Most of the diagnostic artifacts recovered from unit 435E 540N: 1 date to the late 19th century (n=441), with similar amounts of mid 19th century (n=29) and 20th century (n=30) artifacts (Map 7).This area of site is likely the primary refuse area that relates to the Morris family's mid- to late 19th century occupation of Location 2 (AkHa-24) and the continuous occupation of the residential lot throughout the 20th century.

Spatially, no distinct cultural soil strata were identified, as artifacts from all time periods were found in the single topsoil lot across the site. The spatial distribution of diagnostic artifacts at Location 2 (AkHa-24) is shown on Map 7. Overall, similar amounts of mid- and late 19th century artifacts are distributed across the site, with most of the diagnostic assemblage consisting of structural items, specifically nails (see Section 6.0 below). Diagnostic 20th century items are also intermixed throughout the site, which likely relates to the continuous occupation of the residential lot up until approximately the year 2000.

6.0 ANALYSIS AND CONCLUSIONS

Location 2 (AkHa-24) is interpreted to be a domestic refuse site and homestead that has been continuously occupied from the mid- to late 19th century to the early 2000s. The site is likely associated with the Morris family farmstead depicted on the 1877 Historical Atlas map (Pope 1877, Map 3). The patent for all 200 acres of Lot 15 was granted to Joseph Brown Jr. in 1822 as a United Empire Loyalist (U.E.L.) land grant (Ontario Land Registry, n.d.(a): 306) and was then sold to Solomon John Johnson Brown in June 1847 As Solomon John Johnson Brown was a resident of Niagara Township, the Brown-family owners of Lot 15 do not appear in the census records for Caledon Township. This indicates that the Brown family was not occupying Lot 15, Concession 4 WSCR during their years of ownership, but retained the land for agricultural use by local farmers. By 1862, Joseph Morris and his family had purchased the west half of Lot 15, Concession 4 WSCR and, shortly after acquiring the land, a mortgage was given to the Morris' that likely corresponds to the construction of a residence that year (Ontario Land Registry, n.d.(a): 306). The land was then transferred to their eldest son, Edward, in April of 1868 (Ontario Land Registry, n.d.(b), 431) and, by 1871, the Census records show Edward Morris listed as the owner of the 100 acres, with one house, and two barns/stables (1871 Census, Schedule 3, 8). The house and two barn/stables referred to in the 1871 Census likely correspond to the former farmhouse that was demolished by 2001, along with the historical structural remains of two rubble fieldstone foundations situated at the south end of the lot. Based on the materials and methods of the extant foundations of the barn and outbuilding, these may have been built between the late 19th to early 20th centuries (WSP 2023a)

Most of the artifacts recovered from Location 2 (AkHa-24) are structural items (n=1,255, 51% of the total assemblage) including nails, shards of windowpane glass, building component materials (mortar, brick, concrete, tile, pipe), and other miscellaneous metal hardware. This is followed by artifacts with an indeterminate function (n=595, 23% of the total assemblage), such as metal hardware and glass container shards, and then food/beverage-related artifacts (n=536, 21% of the total assemblage), which included items such as ceramic tableware and containers, glass food and beverage containers, and food waste. The dateable assemblage (n=1,373, 53.9% of the total assemblage) consists of 1,007 nails (73% of the dateable assemblage), of which 44% are wire nails that generally date to post-1860, while 29% are cut nails that generally date to the mid- to late 19th century. Once nails are accounted for, the remainder of the dateable assemblage consists of 8.4% mid- 19th century artifacts, 10% late 19th century artifacts, and 8.3% 20th century items. Overall, the late 19th century and 20th century material consists of 62.6% of the dateable assemblage, which calculates the remaining 37.4% of that assemblage to pre-1870. Of this 37.4%, only 0.15% dates to the early 19th century, which is represented by two wrought nails. The Location 2 (AkHa-24) artifact assemblage consists of material that is typically associated with domestic occupations, such as structural artifacts, glass containers of indeterminate function, food and beveragerelated items, miscellaneous hardware items, and personal/societal-related artifacts. These findings are generally consistent with the conclusions of the Stage 2 artifact assemblage from Location 2 (AkHa-24) (Golder 2022).

Four subsurface features were identified during the Stage 3 AA of Location 2 (AkHa-24) (Section 5.2), but none of these features appear to be indicative of a privy, root cellar, well, or other unknown structure. Specifically, Feature 1 consists of a portion of intact ceramic drainage pipe, Feature 2 is an indeterminate linear pit or trench feature located immediately adjacent to the western side of the previous house footprint, Feature 3 is possible post mould, and Feature 4 was interpreted to be an indeterminate pit feature, with large cobble inclusions. All of these Features are interpreted to be of possible historical cultural affiliation or related to the modern land-use or farming activities on the site.

Location 2 (AkHa-24) can be contrasted with Location 12 (AkHa-24) (WSP 2023b), a mid-19th century site that is situated approximately 330 m to the northeast. Location 12 (AkHa-24) is interpreted to be a domestic refuse deposit and a possible "back forty dump" site that was deposited during the Morris family's occupation of the lot (MacDonald 1997: 60; WSP 2023b:30). The artifact assemblage of Location 2 (AkHa-24) consists mainly of structural artifacts, a result of building construction and the subsequent demolition at the site. In comparison, Location 12 (AkHa-24) consisted mostly of food and beverage-related artifacts (n=1,203, 89% of the total assemblage), including 940 pieces of ceramic tableware that dated to the mid-19th century, and was not associated with any significant structural features or structural artifact deposits. The differences between the two sites suggest that Location 2 (AkHa-24) was the homestead of the Morris family from the mid-19th century and into the 20th century, while the area of what is now Location 12 (AkHa-24) may have been used to deposit their refuse during the earlier years of their occupation.

Based on the above findings, WSP concludes that a sufficient level of archaeological data has been revealed to provide an understanding of the mid- to late 19th century occupation of the Morris family at Location 2 (AkHa-24) and assess the CHVI of the site. Location 2 (AkHa-24) does not meet Standard 2c of Section 3.4 of the Draft RHF Standards (Government of Ontario 2021), or Standard 1a-b of Section 3.4.2 of the *Standards and Guidelines for Consultant Archaeologists* (Government of Ontario 2011) for domestic archaeological sites dating after 1830. As such, the historical Euro-Canadian component of Location 2 (AkHa-24) is determined to have been sufficiently documented and is concluded to have no further CHVI. Therefore, Location 2 (AkHa-24) does not require Stage 4 mitigation prior to development impacts.

7.0 RECOMMENDATIONS

The results of the Stage 3 AA of Location 2 (AkHa-24), and the analysis and conclusions presented in Section 6.0 provide the basis for the following recommendations:

1) Location 2 (AkHa-24) has no further cultural heritage value or interest and is not recommended for Stage 4 mitigation of impacts.

The Ontario Ministry of Citizenship and Multiculturalism is asked to review the results and recommendations presented herein, accept this report into the Provincial Register of archaeological reports and issue a standard letter of compliance with the Ministry's 2011 *Standards and Guidelines for Consultant Archaeologists* and the terms and conditions for archaeological licencing.

8.0 ADVICE ON COMPLIANCE WITH LEGISLATION

This report is submitted to the Ministry of Citizenship and Multiculturalism as a condition of licensing in accordance with Part VI of the *Ontario Heritage Act* (Government of Ontario 1990b). The report is prepared to ensure that it complies with the standards and guidelines that are issued by the Minister, and that the archaeological fieldwork and report recommendations ensure the conservation, protection and preservation of the cultural heritage of Ontario. When all matters relating to archaeological sites within the project area of a development proposal have been addressed to the satisfaction of the Ministry of Citizenship and Multiculturalism, a letter will be issued by the Ministry stating that there are no further concerns with regards to alterations to archaeological sites by the proposed development.

It is an offence under Section 48 and 69 of the *Ontario Heritage Act* for any party other than a licensed archaeologist to make any alterations to a known archaeological site or to remove any artifact or other physical evidence of past human use or activity from the site, until such time as a licensed archaeologist has completed archaeological fieldwork on the site, submitted a report to the Minister stating that the site has no further cultural heritage value or interest, and the report has been filed in the Ontario Public Register of Archaeological reports referred to in Section 65.1 of the *Ontario Heritage Act* (Government of Ontario 1990b).

Should previously undocumented archaeological resources be discovered, they may be a new archaeological site and therefore subject to Section 48(1) of the *Ontario Heritage Act*. The proponent or person discovering the archaeological resources must cease alteration of the site immediately and engage a licensed consultant archaeologist to carry out archaeological fieldwork, in compliance with Section 48(1) of the *Ontario Heritage Act* (Government of Ontario 1990b).

The *Funeral, Burial and Cremation Services Act*, 2002, S.O. 2002, c.33, requires that any person discovering or having knowledge of a burial site shall immediately notify the police or coroner (Government of Ontario 2002). It is recommended that the Registrar of Cemeteries at the Ministry of Consumer Services is also immediately notified.

Image 7: Example of disturbance (425E 560N: 1 and 420E 555N: 25) in former house footprint; facing southeast, July 15, 2022.

Image 8: Example of disturbance (430E 555N: 1) in former house footprint; facing north, July 14, 2022.

Image 9: Example of disturbance (425E 545N: 1) in former house footprint; facing north, July 14, 2022.

Image 10: Example of disturbance (425E 550N: 1) in former house footprint; facing north, July 13, 2022.

Image 11: Representative example of a fill-capped unit near barn ramp and driveway; facing north, July 13, 2022.

Image 12: Feature 1 plan view; facing east, July 15, 2022.

Image 13: Feature 2 plan view; facing east, November 21, 2022.

Image 14: Features 3 and 4 plan view; facing west, November 21, 2022.

Image 15: Structural: wrought nail, machine cut nail and wire nail. From fill deposits: porcelain insulator, asphalt shingles.

Image 16: Indeterminate: (right to left) Robertson screw. From fill deposits: Philips screw.

Image 17: Glass tableware: Manganese Lynn glass stemware and Jadeite.

Image 18: Ceramic tableware decorations: (top right to left) decal: overglaze, decal: underglaze, dyed bodied, blue edged, jackfield-like (middle right to left) hand painted blue, hand painted late palette, industrial slip, moulded wheat, moulded dots, blue sponged, blue cut sponged (bottom right to left) black transfer, blue transfer, green transfer, purple transfer and red transfer.

Image 19: Ceramic marks: (right to left) Royal Arms, Griffin Head, '(Por)celain', and 'SUPR..'

Image 20: Foodways: (top right to left) lime green soda bottle, soda bottle with enamel label, alcohol bottle with enamel label (middle right to left) stippled/textured soda bottle, knurled beer bottle base, soda bottle with volume embossed (bottom right to left) crown cap, crown cap with foil liner, crown cap plastic liner, pull tab and plastic disposable lid.

Image 21: Foodways: (top right to left) condiment bottle and jar rim (bottom right to left) jar liner and screw band closure.

Image 22: Personal: clothing fasteners (top right to left) bone button, shell button, Prosser button, black Prosser button, plastic button, and copper alloy button (bottom right to left) corset busk, buckle, tack, and safety pin.

Image 23: Personal: (top right to left) plastic comb, toothpaste tube, (middle right to left) American 1 cent coins (all 20th century) (bottom right to left), clay smoking pipe bowl, clay smoking pipe stem and Bakelite smoking pipe mouthpiece.

Image 24: Tools: (right to left) clothes pin spring, carbon batteries.

Image 25: Tools: (top) whippletree (bottom right to left) harness bell, horseshoe nail, and snap clip.

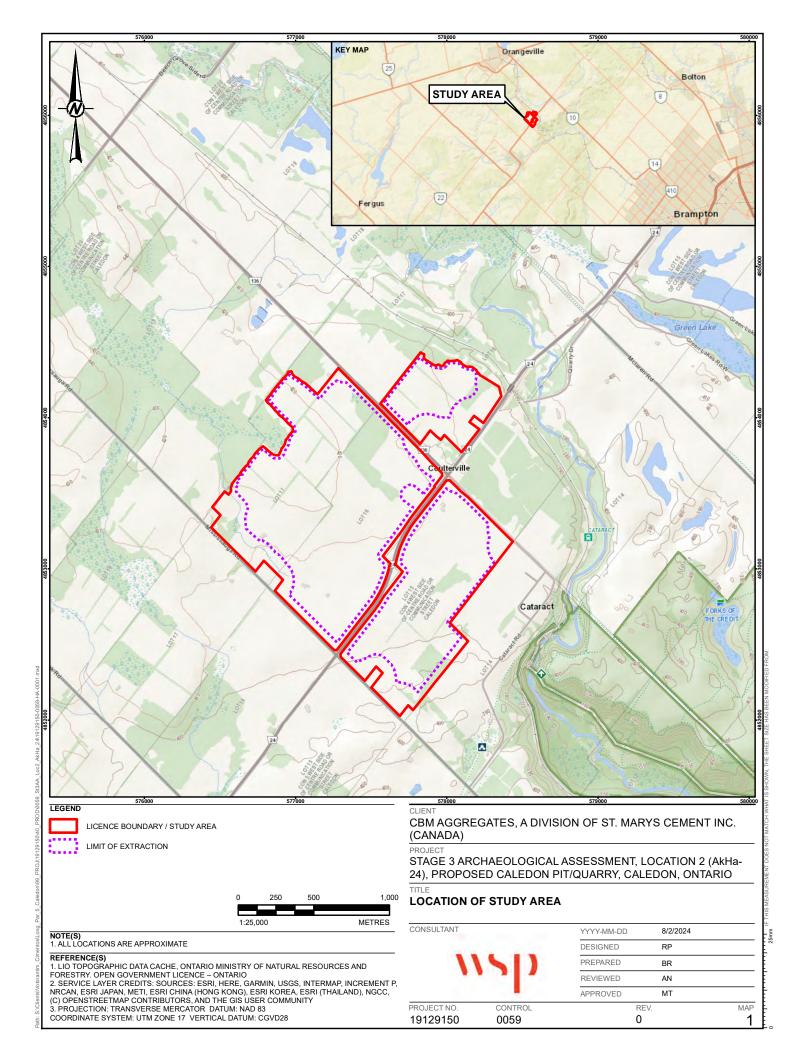

Image 26: Furnishing: (right to left) crimped lamp chimney, light bulb-base. From fill deposits (centre): castor wheel and plug.

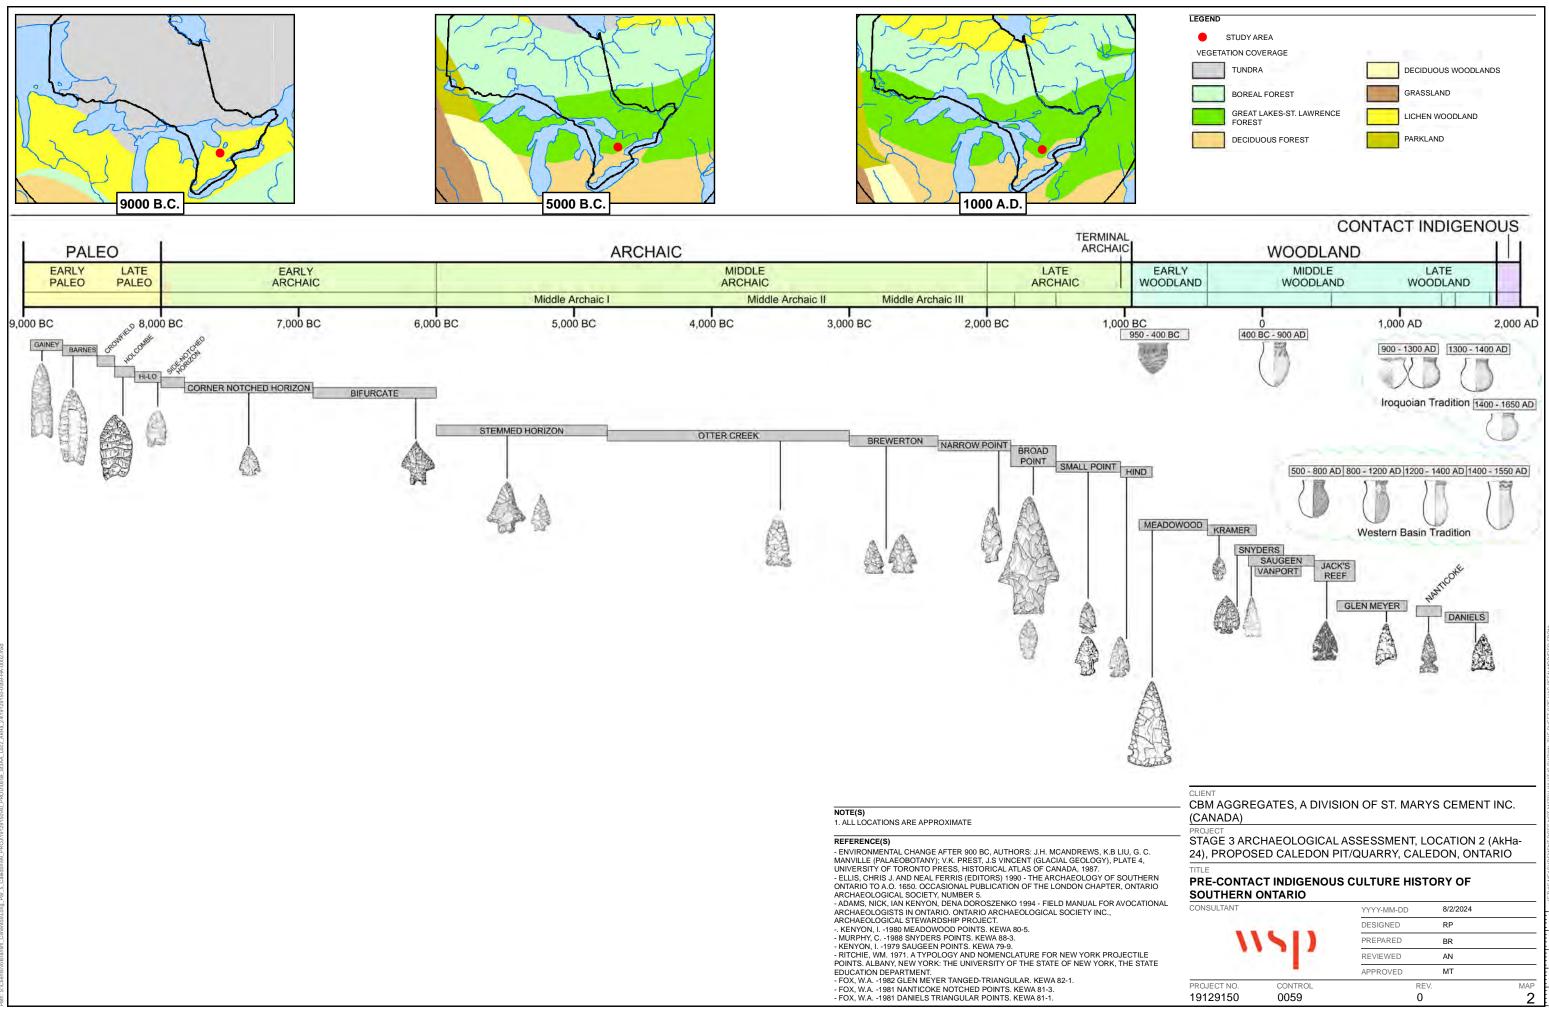

Image 27: Ammunition and Transportation: (right to left), 22 cartridge and possible car headlight bulb.
