Mayfield West Phase 2 Stage 3

Traffic Impact Study

Brookvalley Project Management Inc.

07 June 2024

→ The Power of Commitment

Executive Summary

GHD Limited was retained by Brookvalley Project Management Inc. to prepare a Traffic Impact Study in support of the Official Plan Amendment for the proposed Mayfield West Stage 2 Phase 3 lands located within the Mayfield West Community Development Plan Study Area in the area generally bounded by Old School Road to the north, Hurontario Street to the east, Etobicoke Creek to the south and Chinguacousy Road to the west in the Town of Caledon.

This report determines the site related traffic and subsequent traffic related impacts on the adjacent road network during the weekday a.m. and p.m. peak hours. These impacts are based on the projected future traffic and road network conditions derived for a 2026, 2029, 2031, 2036, and 2041 future planning horizon year.

The proposed draft plan of subdivision prepared by Malone Given Parsons consists of a series of single-family homes, townhouses, commercial uses, and a school block. The residential units, commercial retail space, and elementary school blocks are broken down as follows:

- 4,687 dwelling units
- 3 elementary schools (2 Peel District School Board Schools and 1 Dufferin Peel Catholic School Board School)
- 14 hectares of General Commercial lands

Access to the proposed lands from the regional arterial roads is proposed via a series of collector roads intersecting Chinguacousy Road, McLaughlin Road, Hurontario Street and Old School Road.

The Mayfield West Phase 2 Stage 3 is further divided into two phases, with Phase 1 consisting of the lands on the east side of McLaughlin Road and Phase 2 consisting of the lands on the west side of McLaughlin.

Furthermore, the subject lands were further divided into subphases to establish the construction schedule for the lands. Phase 1 of the proposed subdivision east of McLaughlin Road is assumed to be completed by 2026 and is expected to generate a total of 106 new two-way trips consisting of 26 inbound and 80 outbound trips during the weekday a.m. peak hour and 141 new two-way trips consisting of 89 inbound and 52 outbound trips during the weekday p.m. peak hour.

Under the 2029 horizon year, including Phases 1 through 4 built-out east of McLaughlin Road, the subdivision is expected to generate a total of 585 new two-way trips consisting of 142 inbound and 443 outbound trips during weekday a.m. peak hour and 724 new two-way trips consisting of 454 inbound and 270 outbound trips during the weekday p.m. peak hour.

Under the 2031 horizon year, with all phases of the subdivision built out (Phase 1 east of McLaughlin Road and Phase 2 west of McLaughlin Road), a total of 2,940 new two-way trips consisting of 911 inbound and 2,029 outbound trips during weekday a.m. peak hour and 3,809 new two-way trips consisting of 2,237 inbound and 1,571 outbound trips during the weekday p.m. peak hour.

To mitigate capacity issues along the study area roads, the following improvements have been recommended in previous studies and are assumed to be constructed in the latest analysis:

- Widening of Mayfield Road from 2 to 6 lanes (Chinguacousy Road to Hurontario Street), Region of Peel currently tendering the project
- Widening of Old School Road from 2 to 4 lanes (Chinguacousy Road to Hurontario Street), due to corridor growth and full build-out of the site in 2031
- Widening of McLaughlin from 2 to 4 lanes (Old School Road to Etobicoke Creek)
- Widening of Hurontario from 4 to 6 lanes (north of Highway 410), due to corridor growth in 2026
 - An auxiliary right-turn lane in the northbound and southbound directions.
- Signalization of the intersection of Old School Road & Chinguacousy Road, Old School Road & McLaughlin Road, McLaughlin & Street A, Hurontario Street & Street A

Despite the recommended road widening along Hurontario Street, capacity issues are still prevalent at intersections along Hurontario Street due to the high through volumes. The GTA West Corridor project proposes to extend Highway 410 to the proposed Highway 413 and would result in less through volume along Hurontario Street. Further studies will be required to evaluate the impact of the proposed Highway 410 extension on the Hurontario Street corridor within the study area.

We trust that this satisfies your requirements, but do not hesitate to contact the undersigned if you have any questions.

Sincerely,

GHD

William Maria, P. Eng.

Transportation Planning Lead

1. Introduction

1.1 Retainer and Objective

GHD Limited was retained by Brookvalley Project Management Inc. to prepare a Transportation Impact Study in support of the Official Plan Amendment for the proposed Mayfield West Stage 2 Phase 3 lands located within the Mayfield West Community Development Plan Study Area. The Mayfield West Stage 2 Phase 3 is generally bounded by Old School Road to the north, Hurontario Street to the east, Etobicoke Creek to the south and Chinguacousy Road to the west with the Town of Caledon.

The development boundaries are illustrated in **Figure 1**.

The purpose of this study is to:

- Establish baseline traffic conditions for the study area in 2024 and determine future background operating conditions for a future planning horizon in 2026, 2029, 2031, 2036, and 2041.
- Utilize Institute of Transportation Engineer's (ITE) Trip Generation data and first principles to estimate the site trips generated by the proposed development and distribute the traffic to the adjacent road network.
- Determine future operating traffic conditions during the weekday peak periods through intersection capacity analysis.
- Identify improvements to the transportation infrastructure to accommodate the proposed urban boundary expansion.

1.2 Study Team

The GHD team involved in the preparation of the study are:

- William Maria, P. Eng., Transportation Planning Lead
- Rafael Andrenacci, B.Eng., Transportation Planner

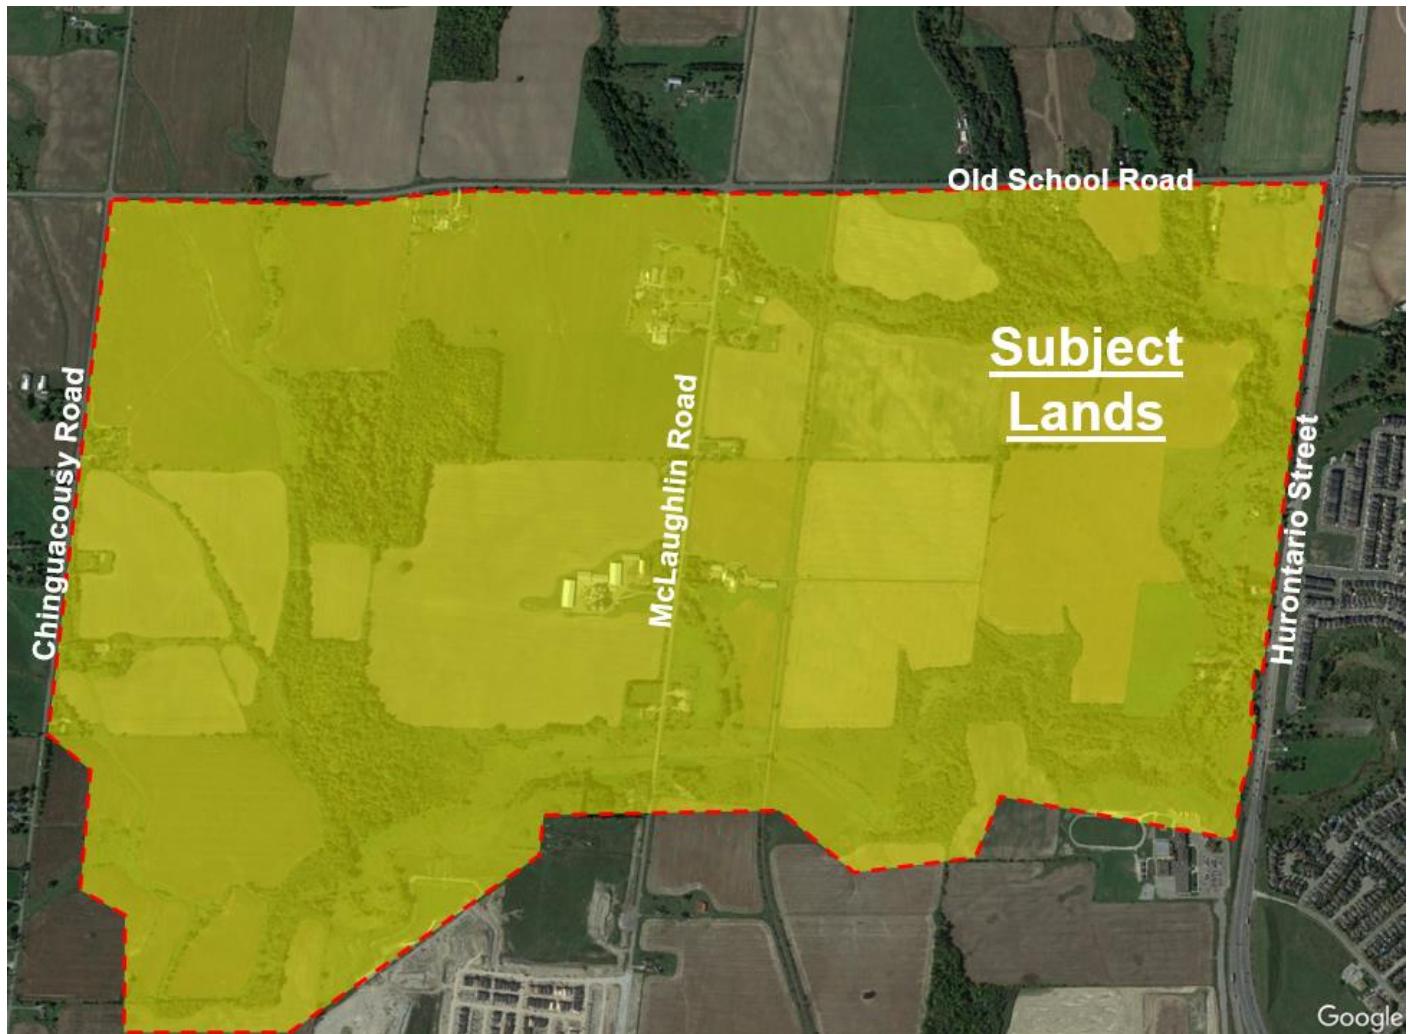

Figure 1 Boundary of the Mayfield West Phase 2 Stage 3 OPA Lands

2. Site Characteristics

2.1 Study Area

The following intersections were included in the study area:

Existing

- Old School Road and Chinguacousy Road
- Old School Road and McLaughlin Road
- Old School Road and Hurontario Street
- Mayfield Road and Chinguacousy Road
- Mayfield Road and McLaughlin Road
- Mayfield Road and Hurontario Street

Proposed

- Hurontario Street and Street 'A'

- McLaughlin and Street 'A'
- Chinguacousy Road and Street 'A'
- Old School Road and Street 'B'
- Old School Road and Street 'D'
- Old School Road and Street 'F'
- McLaughlin and Street 'E'

2.2 Proposed Development Content

A land use plan was prepared by Malone Given Parsons is shown in **Figure 2**. The proposed subdivision consists of the following:

- 4,687 dwelling units
- 3 elementary schools (2 Peel District School Board Schools and 1 Dufferin Peel Catholic School Board School)
- 14 hectares of General Commercial lands

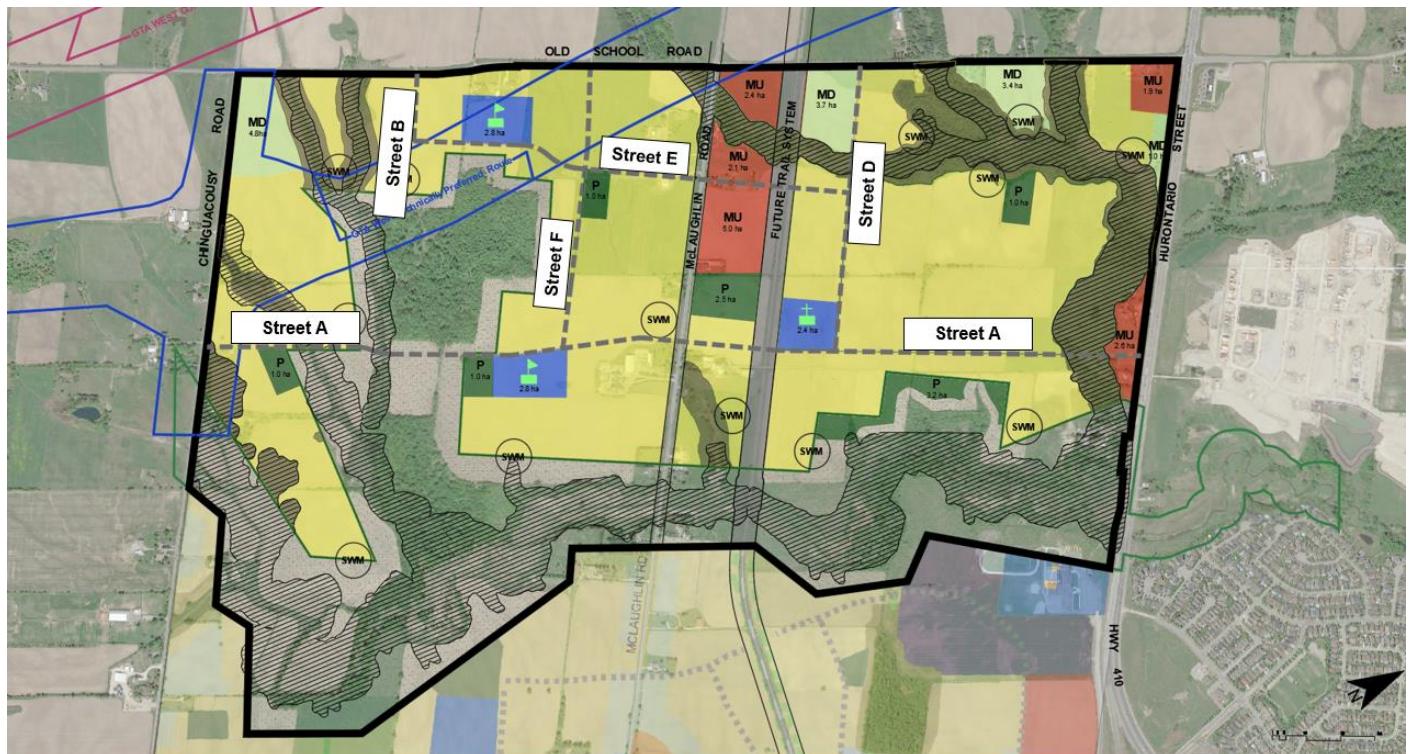

Figure 2 *Land Use Plan*

Access to the proposed subdivision from the regional arterial roads is proposed via a series of new collector roads intersecting Chinguacousy Road, McLoughlin Road, Hurontario Street and Old School Road. The proposed collector roads are also identified in **Figure 2**.

3. Existing Conditions

3.1 Existing Road Network

Hurontario Street/Highway 10 is a north-south Class III – Special Controlled Highway under the jurisdiction of the MTO generally north of its interchange with Highway 410 and is a major arterial road under the jurisdiction of the City of Brampton south of the interchange. In the study area it has a five-lane cross section with a two-way left-turn lane in the median lane. The intersections of Hurontario Street and Mayfield Road is signalized with auxiliary left-turn and right-turn lanes in both the northbound and southbound directions. The intersection with Old School Road is also signalized, with an auxiliary left-turn lane in both the northbound and southbound directions. The posted speed limit on Hurontario Street is 70 km/h south of the interchange with Highway 410 and increases to 80 km/h north of it.

Chinguacousy Road is a north-south collector road under the jurisdiction of the Town of Caledon. In the study area it has a two-lane rural cross-section. The intersections of Chinguacousy Road and Mayfield Road is signalized, while the intersection with Old School Road is an all-way stop-controlled intersections. The posted speed limit on Chinguacousy Road is 80 km/h.

McLaughlin Road is a north-south collector road under the jurisdiction of the Town of Caledon. In the study area it has a two-lane cross-section generally north of Tim Manley Drive and widened to a four-lane cross-section south of Tim Manley through the Mayfield West Phase 2 Stage 2 lands. The intersections of McLaughlin Road and Mayfield Road is signalized, with an auxiliary left-turn lane in the southbound direction and a right-turn lane in the northbound direction. The intersection with Old School Road is an all-way stop-controlled intersection. The posted speed limit on McLaughlin Road is 80 km/h.

Mayfield Road is an east-west arterial road under the jurisdiction of the Region of Peel. In the study area it has a two-lane cross-section and increases to a four-lane cross-section east of Hurontario Street. All three intersections along Mayfield Road (Chinguacousy Road, McLaughlin Road and Hurontario Street) are signalized. Auxiliary left-turn lanes are provided in both the eastbound and westbound directions at the intersection with McLaughlin Road. At the intersection with Hurontario Street, auxiliary right-turn lanes are provided in both directions, an auxiliary left-turn lane in the eastbound direction and a dual left-turn lane is provided in the westbound direction. The posted speed limit on Mayfield Road is 70 km/h.

Old School Road is an east-west collector road under the jurisdiction of the Town of Caledon. In the study area it has a two-lane cross-section. The intersection of Old School Road with Hurontario Street is signalized, with an auxiliary left-turn lane provided in both the eastbound and westbound directions. The intersections with Chinguacousy Road and McLaughlin Road are both all-way stop-controlled intersections. The posted speed limit on Old School Road is 70 km/h.

The existing lane configurations and traffic controls are illustrated in **Figure 3** below.

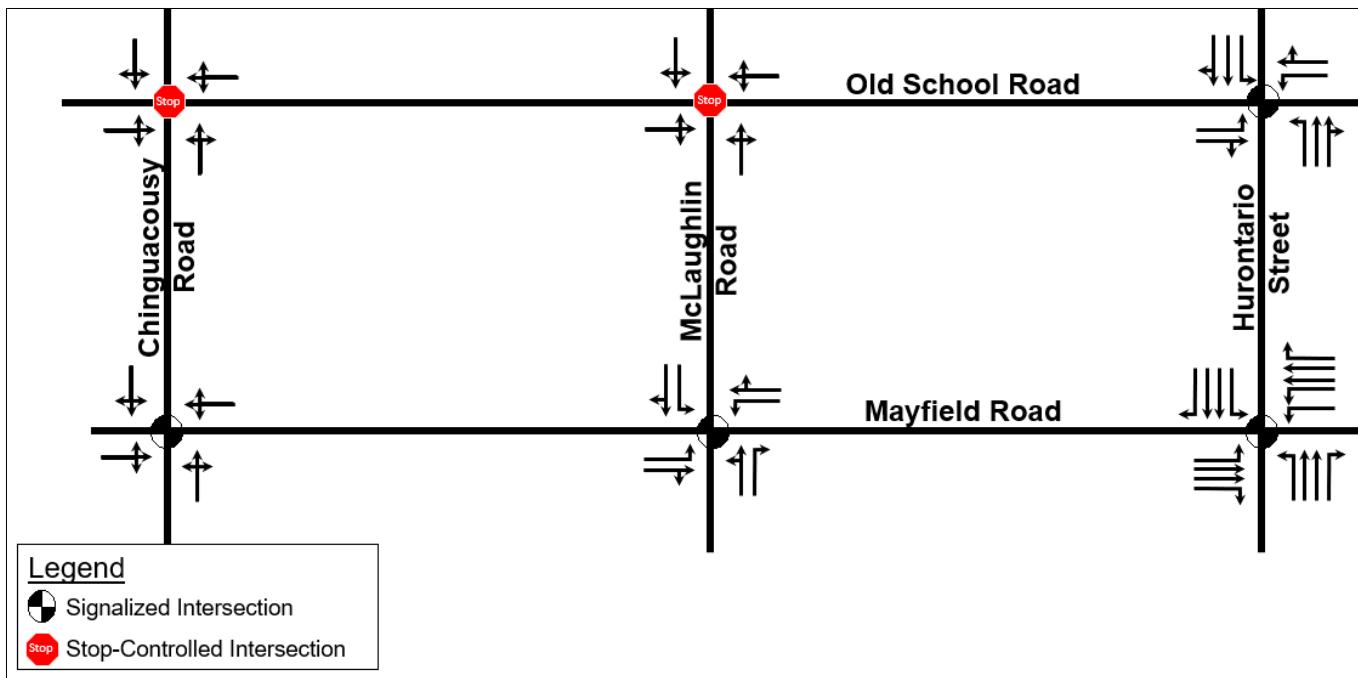

Figure 3 Existing Lane Configurations and Traffic Control

3.2 Pedestrian and Bicycle Routes

Within the study area, pedestrian sidewalks are only provided at the intersection of Hurontario Street and Mayfield Road. Sidewalks are provided on both sides of the road along Hurontario south of Mayfield Road, with a sidewalk only provided on the east side of Hurontario Street north of the intersection and end in close proximity to the interchange of Highway 410 and Hurontario Street. Sidewalks are also provided along both sides of Mayfield Road east of Hurontario Street.

The Town of Caledon's Trails and Cycling Routes Map has identified Old School Road as a Cycling Route.

3.3 Transit Services

Brampton Transit currently offers the following routes within or near the study area:

Route 7 (Kennedy) operates mostly in the north/south direction along Kennedy Road between the intersections of Courtney Park Drive & Hurontario Street and Mayfield Road & Hurontario Street. It currently operates with a headway of 10 minutes or better during the morning and afternoon peak hours.

Route 24 (Van Kirk) operates mostly in the north/south direction along Van Kirk Drive and Royal Orchard Drive between the intersections of Hurontario Street & Mayfield Road and the Peel Memorial Hospital. Courtney Park Drive & Hurontario Street and Mayfield Road & Hurontario Street. It currently operates with a headway of 30-minutes during the morning and afternoon peak hours.

Route 81 (Mayfield West) operates along Kennedy Road, Mayfield Road and Hurontario Street between the intersection of Kennedy Road & Learmont Avenue and the Sandalwood Loop at Sandalwood Loop along Hurontario Street. It currently operates with a headway of 45-minutes during the morning and afternoon peak hours.

GO Transit also operates Route 37 (Orangeville/Brampton) north/south direction along Hurontario Street between the Brampton GO Station and the Orangeville Mall with an hour headway.

3.4 Existing Traffic Data

GHD contracted Ontario Traffic Inc. to collect turning movement counts in February 2024 during the a.m. and p.m. peak hours at the existing study intersections.

The baseline 2024 traffic volumes are provided in **Figure 12** within **Appendix A** with the full turning movement counts provided in **Appendix C**.

4. Future Background Traffic

4.1 Study Horizon Year

The horizon years selected for analysis includes the year of build-out for the first phase in 2026, halfway through the build-out in 2029, full build-out in 2031, and 5-years post build-out in 2036 and 10-years post build-out in 2041.

4.2 Future Road Network Improvements

The January 2018 TMP update estimated that the Hurontario Street Corridor would be significantly over capacity by 2031 as a four-lane road and recommended a monitoring program to review traffic volumes on Hurontario as development proceeds to confirm the need for additional lanes.

4.2.1 GTA West Highway

The GTA West Highway Corridor (Highway 413) is a proposed 52-kilometre Highway that would extend from Highway 400 in the east and to the Highway 401 and 407 interchange to the west. Included within the proposed project is a 4 kilometre extension of Highway 410 to the north to Highway 413, diverting from its current terminus at Hurontario Street that is located between the two study intersections along Hurontario Street.

Two interchanges are proposed in close proximity to the subject site, one along Chinguacousy south of Old School Road and the other located along Hurontario Street north of Old School Road. Due to the proximity to the study area, background traffic and site generated traffic will be impacted by the proposed highway project, resulting in scenarios with and without the highway being evaluated. The location of the study area within the GTA West corridor is provided in **Figure 4**.

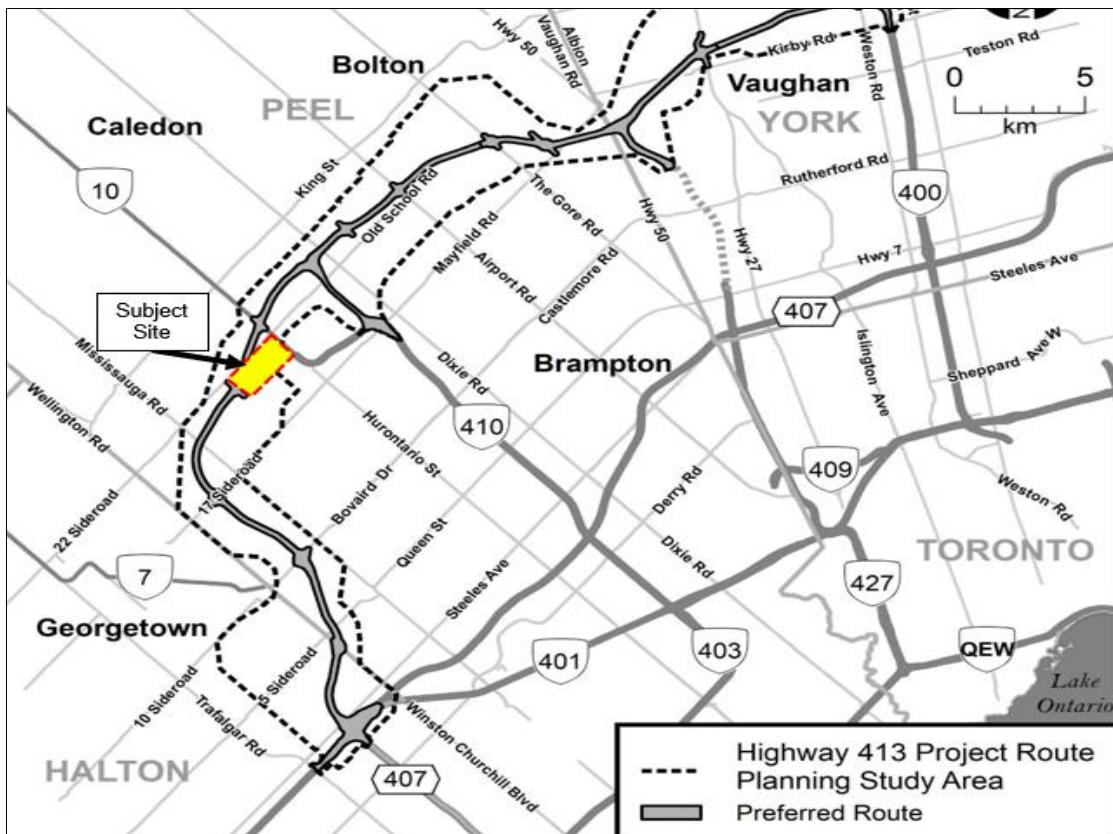

Figure 4 Proposed Highway 413 Corridor (highway413.ca)

Currently the preferred alignment has the proposed highway cutting through the northwest parcel of the subject lands southeast of Chinguacousy Road and Old School Road and includes an interchange at Chinguacousy Road. However, the final alignment of the highway has not yet been determined and a revised alignment to avoid constraining development of the Mayfield West Study Area would be preferred.

The subject site is located within the vicinity of Section 4 of the proposed Highway's corridor with Alternative S4-1 currently proposed to cut through the lands of Mayfield West Phase 2 Stage 3. The preferred alignment would be similar to the Alternative S4-2 design, with the Highway 413 route located just to the north of the subject site. The preferred alternative is shown on **Figure 5**.

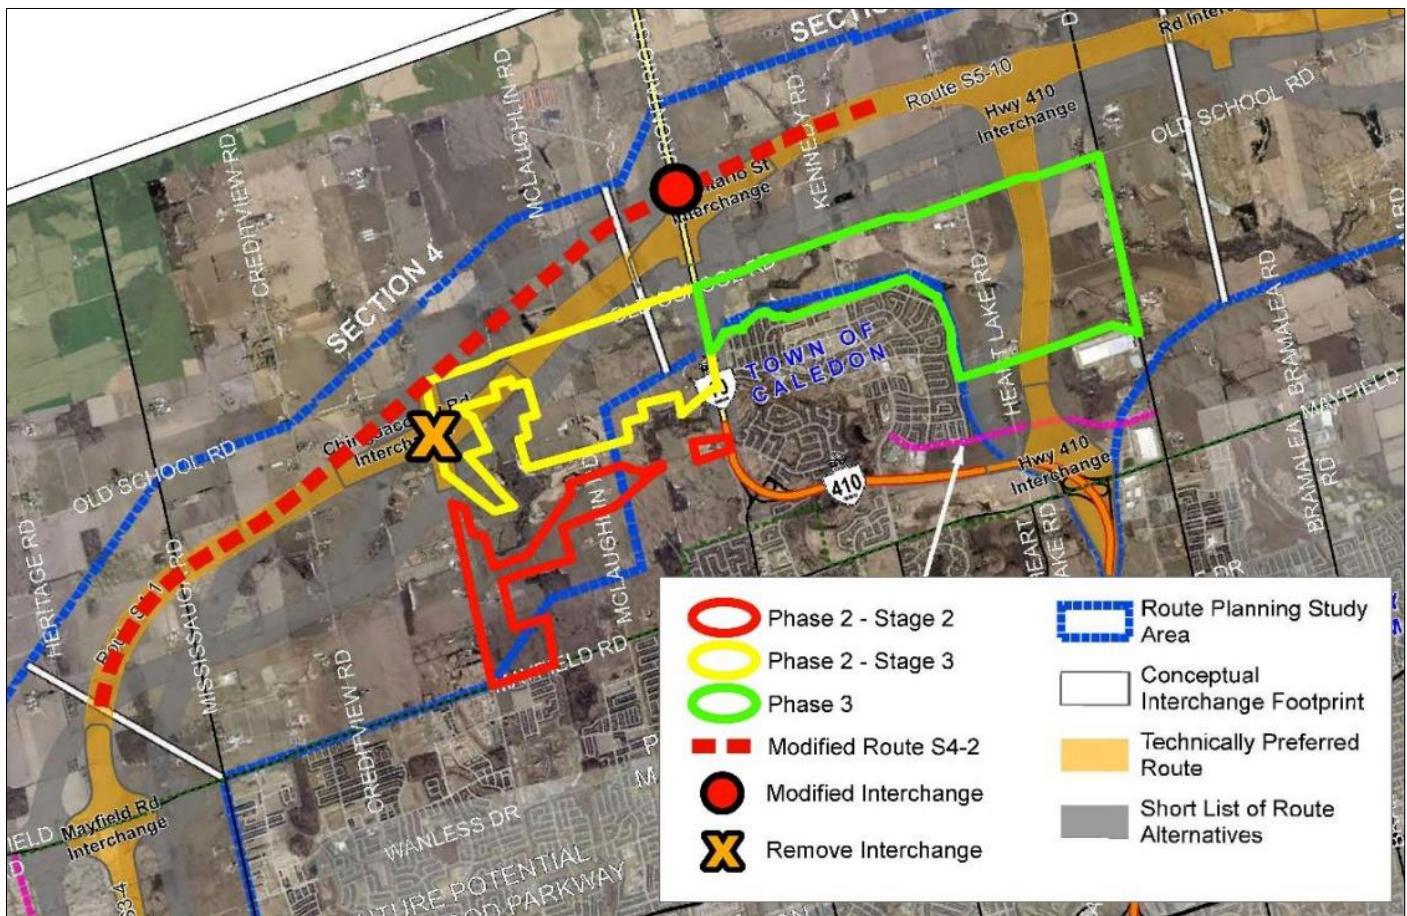

Figure 5 Preferred Alternative Highway 413 Alignment – Section 4

4.2.2 Highway 410/Hurontario Street Interchange

Currently, Highway 410 terminates at Hurontario between Old School Road and Mayfield Road. In 2016, the Town of Caledon initiated a Class Environmental Assessment for the widening of McLaughlin Road from Mayfield Road northerly approximately 1700 metres, the construction of the new east-west Spine Road (Tim Manley Road) from Hurontario Street to Chinguacousy and later extended the study area to include the Highway 410 interchange at Hurontario Street/Valleywood Boulevard.

The modifications to the Highway 410 interchange are necessary to maintain and accommodate the operation of the proposed intersection of the proposed Spine Road (Tim Manley Avenue) with the 410 interchange and the resulting traffic volumes from the proposed road. The interchange also serves to improve the traffic issues on the east side of Hurontario Street along Valleywood Boulevard through the subdivision. The configuration of the proposed interchange is shown in **Figure 6**.

Further discussion is provided in **Section 5.2** regarding the impact of the future Highway 410/Hurontario and Tim Manley interchange on the trip distribution.

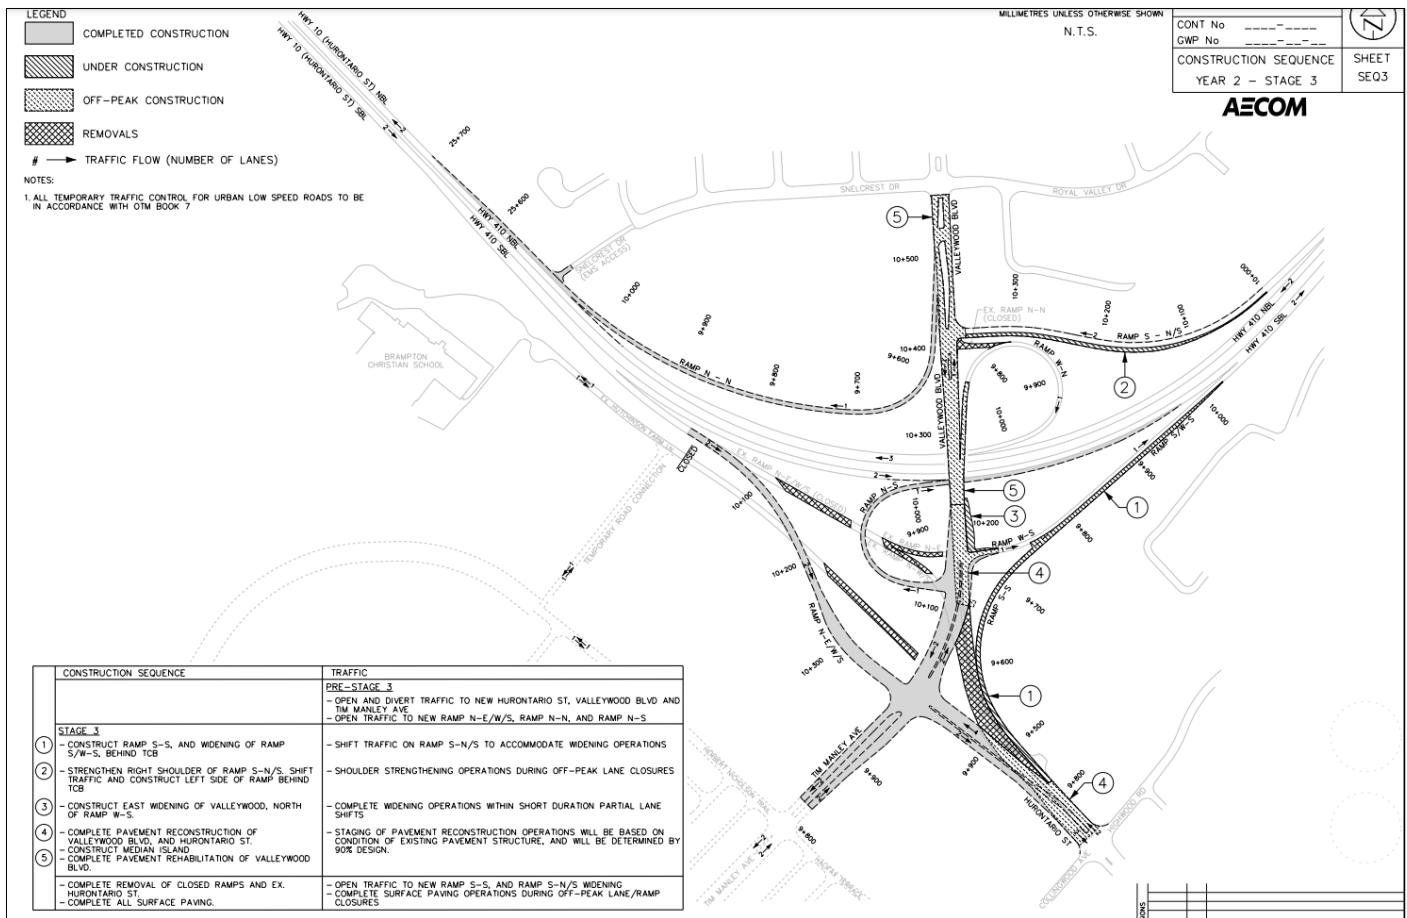

Figure 6 Highway 410/Hurontario Street Interchange Reconfiguration (60% Design)

4.2.3 Mayfield Road Widening

The Region of Peel completed an Environmental Assessment for improvements along Mayfield Road from Chinguacousy Road to Heart Lake Road, dated July 2014.

The EA identified the following alternatives to address the needs of the surrounding area to address future projected growth:

- Do Nothing
- Improve Transportation Systems Management
- Improve Travel Demand Management
- Increase capacity to parallel roadways
- Increase capacity to Mayfield Road

The following design concepts were considered for road widening within several areas along Mayfield Road:

- Do Nothing
- Widen to the North Side only
- Widen to the South Side only
- Widen to both the North Side and South Side

The environmental assessment identified that the preferred option included a widening of Mayfield Road throughout the subject site's study area (not the EA's study area) on both the north and south sides.

The Region's Capital Roads Construction Program (2013) identified the following schedule for roadway improvements:

- From a two-lane to a four-lane cross-section by 2018
- From a four-lane to a six-lane cross-section by 2029

Despite the Region's Capital Roads Construction Program from 2013, the 2023 Region of Peel budget has allocated funds to widen Mayfield Road between Chinguacousy Road and Hurontario Street from a two-lane to a six-lane cross-section. Peel Region is tendering works in 2024 for the approved widening to a six-lane cross-section between Chinguacousy Road and Hurontario Street and construction is anticipated to begin in 2024-2025. As a result, GHD has assumed Mayfield Road to be widened to its ultimate six-lane cross-section under the 2026 horizon year.

The typical cross-section for the six-lane configuration is provided in Figure 6-5 of the EA. The typical cross-section includes six through lanes and a multi-use pathway on each side of the road. Figure 6-5 of the EA is also provided in **Figure 7**.

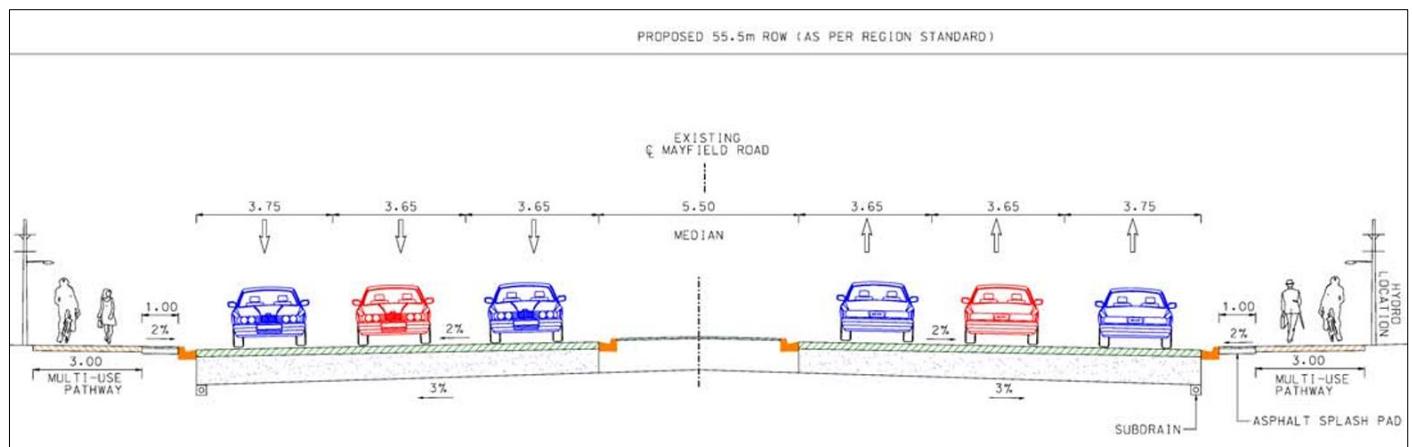

Figure 7 Mayfield Road Widening Cross-Section (Region of Peel)

4.2.4 McLaughlin Road Widening

The Town of Caledon completed an Environmental Assessment for the widening of McLaughlin Road within Mayfield West Phase 2, which also included the construction of a new east/west Spine Road. The environmental assessment confirmed that the preferred option included a widening of McLaughlin Road in addition to improved transit services and active transportation, travel demand management, and the construction of a Spine Road and interchange improvements.

Section 5.1.1 of the EA outlined the various alternatives considered for the widening of McLaughlin, which proposed to widen to a four-lane cross-section, widening to a four-lane cross-section while shifting the road to the east or the west, or a hybrid of the three alternatives.

The typical cross-section for the widened McLaughlin Road was then discussed in Section 6.1.3 and illustrated in Figure 6-1 of the EA. The typical cross-section includes four through lanes, a left-turn lane as required at all intersections, and a bike lane on each side of the road. Figure 6-1 of the EA is also provided in **Figure 8**.

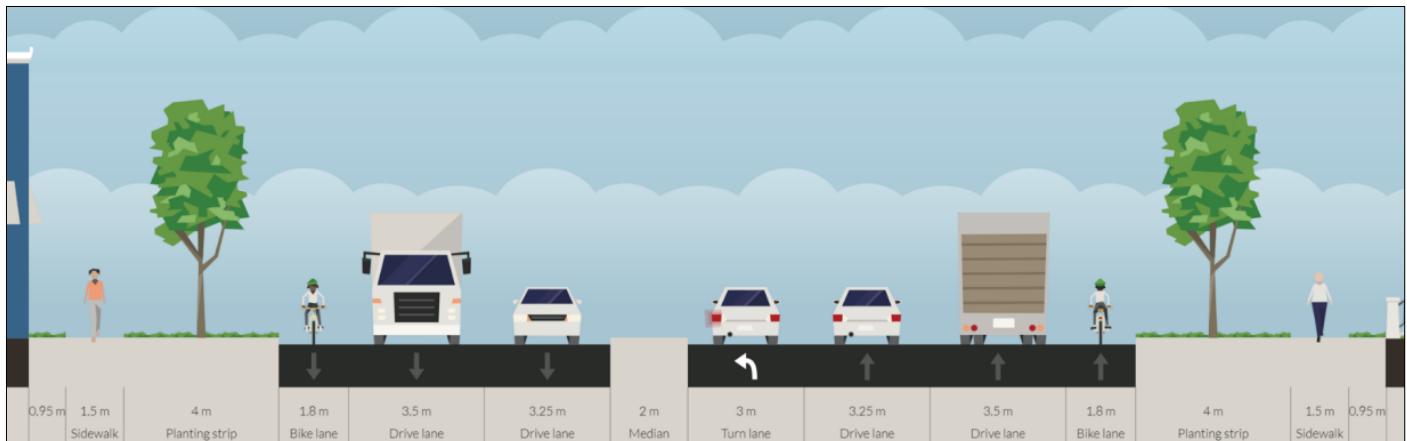

Figure 8 McLaughlin Road Widening Cross-Section (Town of Caledon)

Based on the findings of the EA, GHD will assume that the Town of Caledon will proceed with the widening of the McLaughlin Road through the subdivision. The widening of McLaughlin Road has been completed from the south up to Lippa Drive as part of the Stage 1B / Stage 2 of the subdivision. However, no timeline has been provided for construction to start through the Stage 3 lands and as a result the four-lane cross-section is assumed to be constructed once the traffic volumes along McLaughlin Road warrant it.

4.2.5 Chinguacousy Road Environmental Assessment

The Town of Caledon has initiated a Schedule 'C' Municipal Class Environmental Assessment along Chinguacousy Road, however the Class EA has not been completed. The Class EA is currently contemplating either a two-lane or a four-lane cross-section, and the Phase 2 Stage 1 & 2 Draft Plans have agreed to improve intersections and provide the necessary widenings as part of their Draft Plan Applications. Similarly, GHD will confirm if a widening is warranted along Chinguacousy based on future volumes.

4.3 Future Transit Improvements

The Town of Caledon is currently studying two Major Transit Station Areas within the Town, including the Mayfield West Planned Major Transit Station Area just south of the subject site at Hurontario and Tim Manly Avenue. The location of the planned transit hub is shown in **Figure 9**, retrieved from the Town's website, and is currently proposed to be a bus rapid transit station/stop.

The area allocated to the future transit hub has been included in the approved plan of subdivision for the property known as 12290 Hutchinson Farm Lane located in the Mayfield West Phase 2 Secondary Plan area.

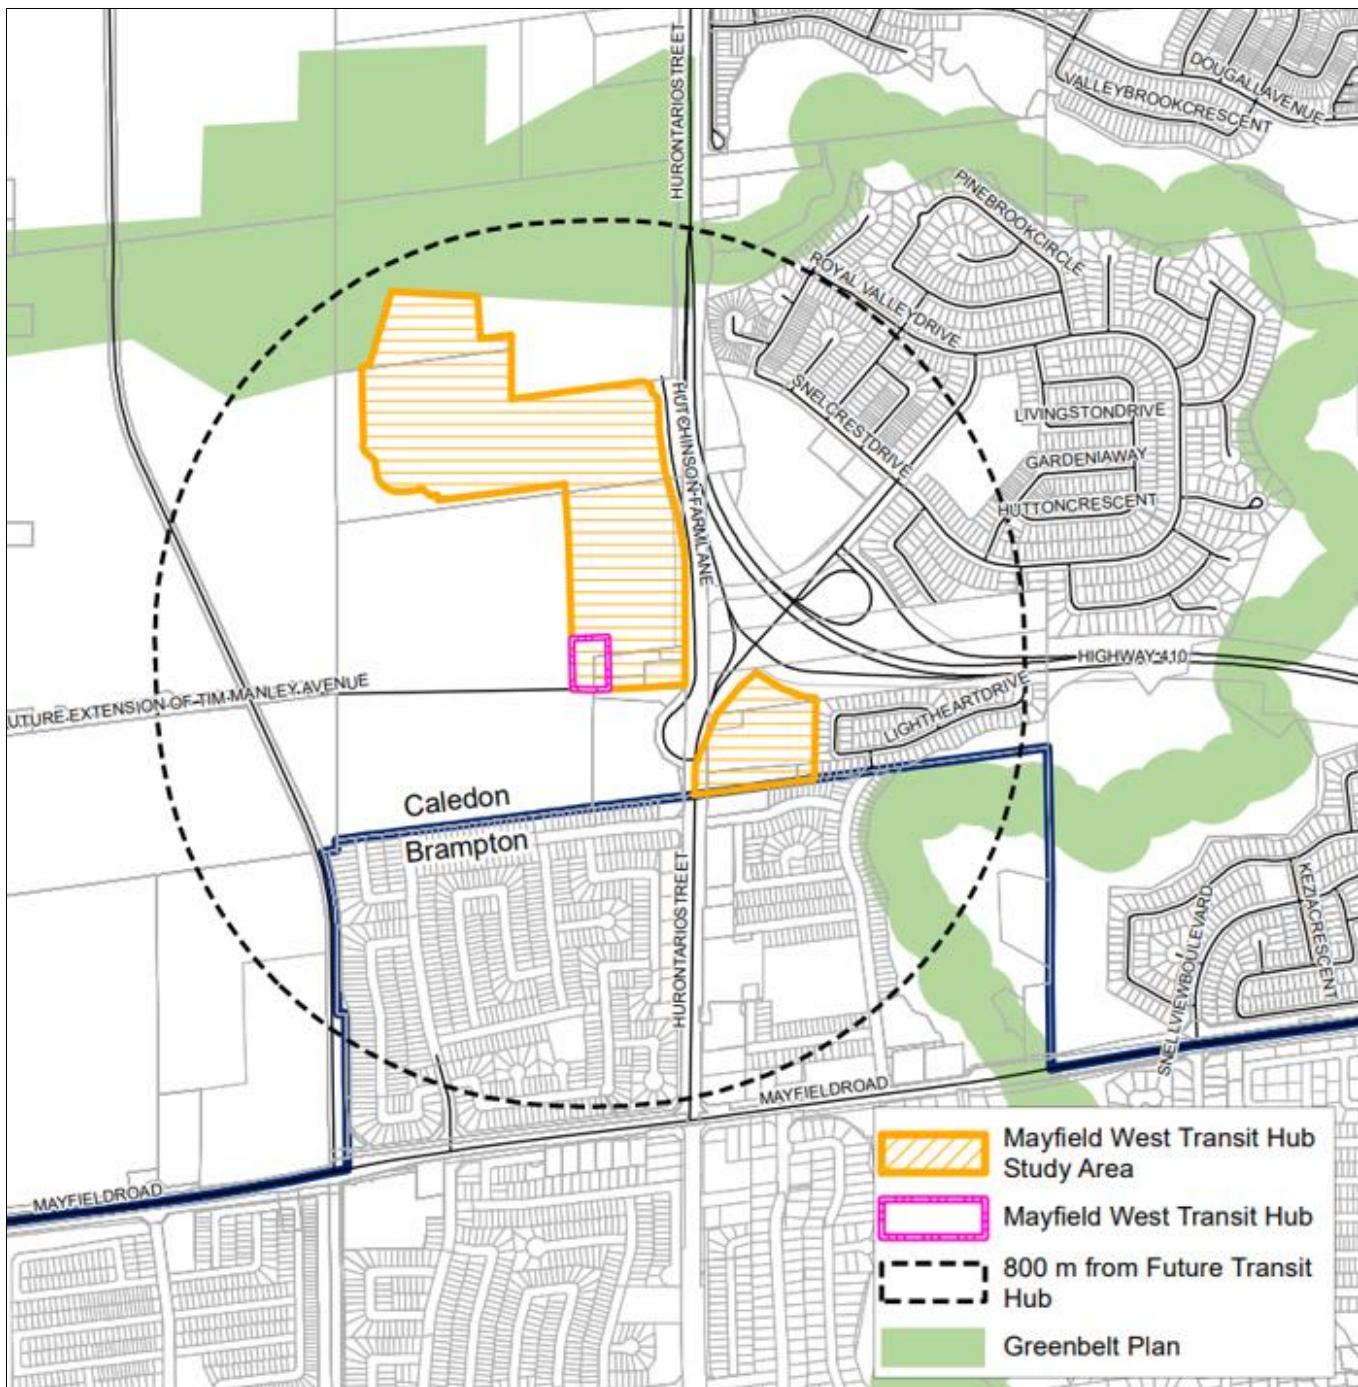

Figure 9 Mayfield West Planned Major Transit Station Area (Caledon.ca)

Although the MTSA is currently at a planning stage, it is important to note that one of two major transit station areas that the Town is currently studying is located a short distance from the subject site. The MTSA would provide future residents and employees of the study area an opportunity to explore alternative modes of travel and reduce their dependency from single occupant vehicle trips.

A staff report completed by the Town of Caledon noted that the Metrolinx Regional Transportation Plan 2041 had designated the portion of Hurontario Street between north of downtown Brampton to Mayfield West as a Priority Bus Corridor. Once the Hurontario LRT is operational, a future Bus Rapid Transit service can link the northern terminus of the LRT to the Town of Caledon in order to integrate the employment areas within the Region of Peel. It is also noted

that a major north/south transit spine would also have the potential to link many east/west rapid transit routes in order to improve higher order transit within the area.

The provision of this transit hub would provide the Town with a great opportunity to encourage public transit usage within the Mayfield West Phase 2 Stage 3 lands by providing residents and employees with a public transit link between their dwellings/workplaces and the hub and further connecting them with other local and regional transit routes.

4.4 Future Active Transportation Improvement

The Region of Peel and its three municipalities (Caledon, Mississauga, and Brampton) purchased the rail line formerly known as the Orangeville Brampton Railway. The line currently runs through the subject lands, just east of McLaughlin Road. The rail line will be converted to a multi-use trail that will provide an active transportation between the three municipalities in addition to connected to the Trans Canada Trail network of trails.

The Town of Caledon has identified the following network recommendations through the Town's Active Transportation Master Plan:

- A signed cycling route and a multi-use path along Old School Road
- A multi-use path along Chinguacousy Road
- A multi-use path along McLaughlin Road
- The Orangeville Brampton Rail multi-use trail

The proposed subdivision includes roads that have 22-metre (Street A and B) and 20-metre (Street C and D) right-of-ways that would require a sidewalk on both sides of the street throughout the subdivision.

As per the Town's Transportation Master Plan, dated October 2017, residential collector roadways are recommended to have a 3-metre off-street multi-use trail or a 1.5 metres striped on-street bike lane. The TMP also states that in the case of new construction, where multi-use paths are proposed, the multi-use path will take the place of the sidewalk.

The active transportation plan for the subdivision and how it will connect to the municipal road network is shown in **Figure 45**, and includes the active transportation network recommended through the Active Transportation Plan, sidewalks along the external road network, a sidewalk on one-side of the road and cycling facilities on the other side on Streets A-D, and a sidewalk on one side of the remaining roads throughout the subdivision.

4.5 Corridor Growth

GHD applied a two percent compounded annually growth rate to all roads within the study area, with the exception of a one percent growth rate on Hurontario Street at the intersection with Old School Road. This approach is consistent with the 2018 Transportation Master Plan Study and consistent with other studies completed in the area. The future volumes with only corridor growth applied is provided in **Appendix E**.

4.6 Background Development Traffic

GHD reviewed the Town's development application web portal to determine which planned or approved background developments located near the subject site would contribute to traffic volumes at the study intersections. The following sites were included as background traffic, and confirmed with Town staff through the Terms of Reference:

- Mayfield West Phase 1 - Stage 2 (BA Group – September 2021)
- Mayfield West Phase 2 - Stage 2 (Paradigm Transportation Solutions Limited – January 2018)

The proposed trip generation from each background development is summarized in the table below, with the trip distribution for each site provided in **Appendix E**. Only the Traffic Impact Study prepared for the Mayfield West Phase 1 lands provided separate trip assignments for scenarios with and without the Highway 413.

Table 1 *Background Development Traffic*

Background Development	Peak Hour Trips					
	Weekday AM			Weekday PM		
	In	Out	Total	In	Out	Total
Mayfield West Phase 1 - Stage 2	205	625	830	685	400	1,085
Mayfield West Phase 2 - Stage 2	2,687	3,648	6,351	4,216	3,650	7,868

The three developments (the subject site and the two background developments) all have varying timelines for full build-out of their respective subject sites. The follow methodology was provided to Town staff and confirmed to be acceptable to project the background development traffic under the future horizon years, and is based on the assumed build-out years provided in their respective TIS. It is understood that the background developments are at various stages of development and as a result the assumed timelines in each study may have varying build-out dates than what is currently occurring:

- For Mayfield West Phase 1 Stage 2, the TIS assumed a full build-out in 2028. Based on the most recent Google Earth information, the land had not been graded in 2022, so to be consistent we would like to assume that the first units would be occupied by 2024. To attain full build-out by 2028, this would result in 20% being built per year resulting in 60% of the site to be built in 2026 followed by 100% in 2028. For this background development, we would like to assume 60% of the site traffic will be included under the 2026 Future Background traffic with 100% of it added for the remaining horizon years.
- Similarly for Mayfield West Phase 2 Stage 2, the TIS had assumed their traffic to be 100% assigned under the 2031 horizon year. Based on Google Earth images again, it seems like the first units were occupied by 2021. To attain 100% build-out by 2031, this would result in 9% being built per year. As a result, we proposed to include 55% of the site traffic under the 2026 Future Background scenario, 80% under the 2029 Future Background scenario, and 100% for the remaining years.

The total site trips from the two background developments are provided (without and with the GTA West) in **Figure 13** and **Figure 14** for the 2026 horizon year, **Figure 15** and **Figure 16** for the 2029 horizon year, and **Figure 17** and **Figure 18** for the 2031 horizon year and beyond within **Appendix A**.

4.7 Future Background Traffic Volumes

The background traffic volumes for the 2028, 2033, and 2038 horizon years were derived by applying the respective growth rate to the projected 2024 traffic volumes and adding the total background development site traffic provided in their corresponding figure (**Figure 13** through **Figure 18**).

The resulting 2027 and 2032 future background traffic volumes are summarized in **Figure 19**, **Figure 20**, and **Figure 21** for the scenario without the GTA West Highway and in **Figure 24**, **Figure 25**, and **Figure 26** for the scenario with the GTA West Highway.

5. Site Generated Traffic

5.1 Site Traffic Generation

The Mayfield Phase 2 Stage 3 lands consist of a total of 4,687 dwelling units. As some townhouses can be permitted in both low-density and high-density residential designations, the breakdown between single family/semi-detached, townhouse, and mid-rise dwelling has not been finalized. To provide an assessment based on the various dwelling

types, the breakdown has assumed to be consistent with the Draft Plan submission, which generally consisted of 40% single family/semi-detached dwelling units, 30% townhouse dwelling units, and 30% mid-rise dwelling units.

The breakdown results in a total of approximately 1,875 Single/Semi-Detached dwelling units, 1,406 Street/Lane Townhouse dwelling units, and 1,406 dwelling units within Medium Density Blocks.

As the elementary school block is at a very early stage in planning, the anticipated student population is currently unknown. In order to estimate the trip generation for the block, student populations were estimated based on information found in the DPCDSB Education DC Background Study, 2019 and Peel District School Board Education DC Background Study, 2019. The PDSB currently has an average of 606 students per school while the DPCDSB school while the DPCDSB currently has an average of 431 students. Two school blocks have been allocated to the Peel District School Board while the third block was allocated to the Dufferin Peel Catholic District School Boards. As a result, the subject lands are estimated to have a total student capacity of 1,643 students.

Consistent with previously completed studies, in order to estimate the trip generation for the commercial blocks it is assumed that the total GFA of the commercial blocks would correspond to 25% of the 14 hectares, resulting in approximately 376,737 ft² of GFA.

The trip generation for the residential uses was calculated using rates provided in the Institute of Transportation Engineer's (ITE) Trip Generation Manual, 11th Edition using Land Use Code (LUC) 210 (Single-Family Detached Housing), LUC 220 (Multifamily Housing – Low-Rise), LUC 222 (Multifamily Housing – Mid-Rise) for the residential components, LUC 820 (Shopping Center - >150k) for the commercial component, and LUC 520 (Elementary School) for the elementary school blocks.

A 5% modal split was applied to both the residential and commercial component, and a 35% pass-by rate during the p.m. peak for the commercial component, consistent with the rates used in the 2018 Transportation Master Plan and previously completed studies within the surrounding area.

Although not finalized, it is anticipated that the three school catchment areas will encompass most of the subject site lands. It is expected that most of the trips generated by the school will be diverted trips from the subject lands residential component from parents dropping off students in the morning and proceeding to work as the morning peak hours for both uses typically overlap. A similar pattern is also expected during the afternoon peak hour as parents return home and pick up their kids on the way, however the schools are estimated to generate less trips during the afternoon commuter peak hour as the school peak typically occurs before the afternoon commuter peak hour.

Despite a low volume of new primary trips expected to be generated by the subject land's schools, GHD assumed that only 20% of the school's trip generation would be new primary trips to account for students getting dropped off by parents that are not leaving the study area, staff that typically live outside of the catchment area, and some students that may be located outside of the catchment area.

In order to establish the trip generation for each phase, GHD considered the phasing of each block and how many units would be constructed in each phase. For the commercial blocks and elementary school blocks, despite some of the lands located in earlier phases it was assumed that they would both be built out and operational only by the 2031 horizon year.

Table 2 below summarizes the estimated trip generation for the proposed subdivision.

Table 2 Estimated Site Trips

Land Use (LUC)	Dwelling Units/GFA/ School Capacity	Parameters	Peak Hour						
			Weekday AM			Weekday PM			
			In	Out	Total	In	Out	Total	
Single/Semi-Detached, (LUC 210)	1,875 units	Trip Ratio	25%	75%	100%	63%	37%	100%	
		Gross Trips	328	985	1313	1111	652	1763	
		Total Mode Split Reduction	-16	-49	-66	-56	-33	-88	
		Total New Trips	312	936	1248	1055	619	1674	
Street/Lane Townhouse (LUC 220)	1,406 units	Trip Ratio	24%	76%	100%	63%	37%	100%	
		Gross Trips	134	428	562	452	265	717	
		Total Mode Split Reduction	-7	-21	-28	-23	-13	-36	
		Total New Trips	127	407	534	429	252	681	
Medium Density Blocks (LUC 221)	1,406 units	Trip Ratio	23%	77%	100%	61%	39%	100%	
		Gross Trips	139	468	607	334	215	549	
		Total Mode Split Reduction	-7	-23	-30	-17	-11	-27	
		Total New Trips	132	445	577	317	204	521	
Commercial (LUC 820)	20,800 m ²	Trip Ratio	62%	38%	100%	48%	52%	100%	
		Gross Trips	220	136	356	704	763	1467	
		Total Mode Split Reduction	-11	-7	-18	-35	-38	-73	
		Pass By (35%)	N/A	N/A	N/A	-257	-257	-514	
		Total New Trips	209	129	338	412	468	880	
Elementary School (LUC 520)	1,643 students	Trip Ratio	54%	46%	100%	46%	54%	100%	
		Gross Trips	656	560	1216	121	142	263	
		Diverted Trip Reduction	-525	-448	-973	-97	-114	-210	
		Total New Trips	131	112	243	24	28	52	
Total Pass-By (Full Build-Out)			N/A	N/A	N/A	257	257	514	
Total Primary Trips (Phase 1, 2026)			26	80	106	89	52	141	
Total Primary Trips (Phases 1-4, 2029)			142	443	585	454	270	724	
Total Primary Trips (Full Build-out, 2031 and Beyond)			911	2,029	2,940	2,237	1,571	3,809	

The first subphase of the proposed development east of McLaughlin Road is expected to be constructed by 2026 and includes a total of 106 new two-way trips consisting of 26 inbound and 80 outbound trips during weekday a.m. peak hour and 141 new two-way trips consisting of 89 inbound and 52 outbound trips during the weekday p.m. peak hour.

Under the 2029 horizon year, including Phases 1 through 4 built out, the majority of the subject site on the east side of McLaughlin Road is expected to generate 585 new two-way trips consisting of 142 inbound and 443 outbound trips during weekday a.m. peak hour and 724 new two-way trips consisting of 454 inbound and 270 outbound trips during the weekday p.m. peak hour.

Under the 2031 horizon year, with the subject site assumed to be fully built-out, it is expected to generate 2,940 new two-way trips consisting of 911 inbound and 2,029 outbound trips during weekday a.m. peak hour and 3,809 new two-way trips consisting of 2,237 inbound and 1,571 outbound trips during the weekday p.m. peak hour.

5.2 Site Traffic Distribution and Assignment

In order to establish the site traffic distribution for the subject site, GHD considered the phasing of the site based on information from the Draft Plan submission and the anticipated construction of each roadway and is subject to change.

Under the first horizon year in 2026, only the blocks within the vicinity of Street 'A' between McLaughlin Road and the rail line (formerly known as the Orangeville Brampton Railway) are anticipated to be built out. As a result, all site traffic was assumed to enter and exit the site through the intersection of McLaughlin Road and Street 'A'.

Under the 2029 horizon year, it is anticipated that the phasing continues towards the east up to Hurontario Street. Under this horizon year, it is assumed that the entirety of Street 'A' is built-out in addition to a proposed signalized intersection at Street 'A' and Hurontario Street.

As construction is assumed to be completed by 2031, the remaining units and roadways to the east of McLaughlin Road will be built-out providing a third access onto the external road network with Street 'D' providing a north/south connection between Old School Road and Street 'A'. In addition, the entirety of the west portion of the lands to the west of McLaughlin Road are also assumed to be built-out.

The general phasing of the subject site through the three horizon years is shown in **Figure 10**, with the breakdown of each dwelling type per horizon year provided in **Table 3**. The phasing shown in the figure below is not to scale and is only provided to give a general idea of the phasing for the subject lands.

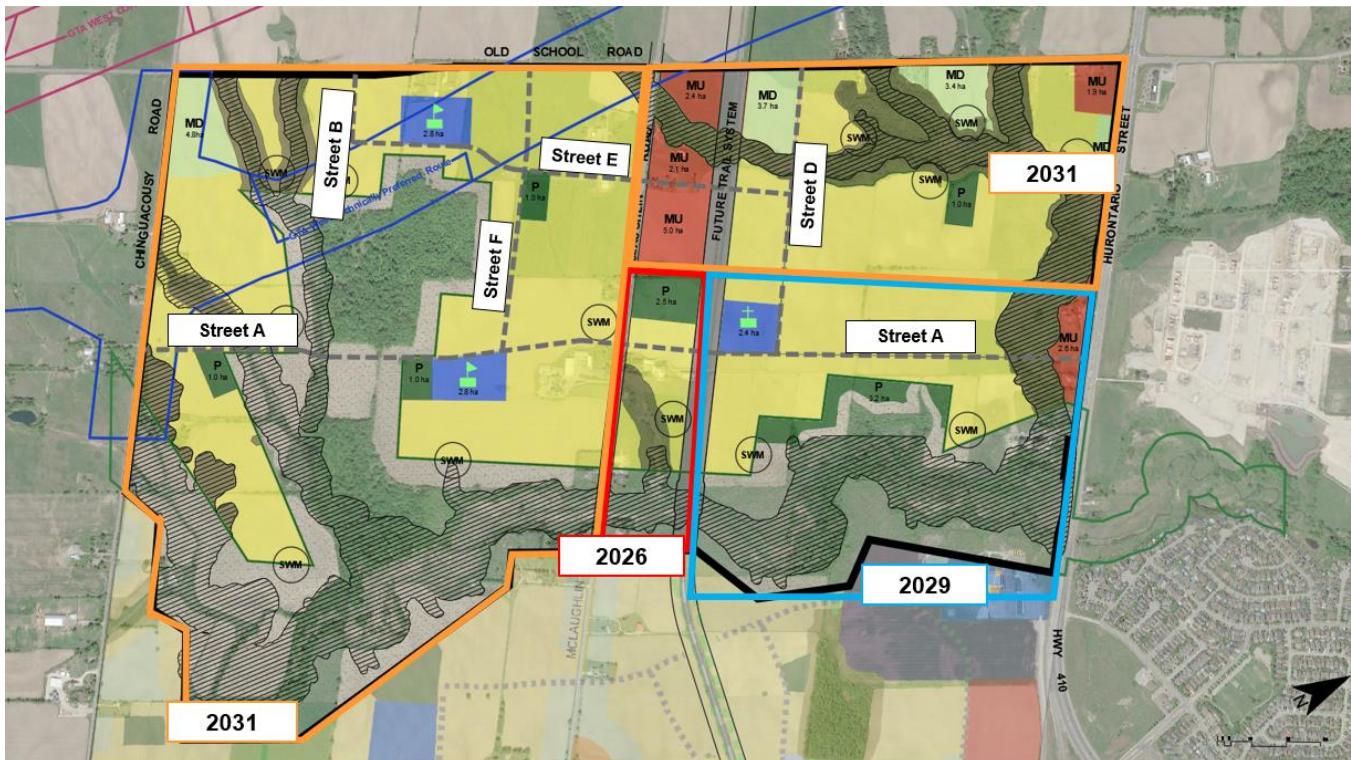

Figure 10 Phasing Breakdown

Table 3 Dwelling Unit Count per Horizon Year

Horizon Year	Detached	Townhouse	Medium Density	Commercial	School
2026	102 units	102 units	N/A	N/A	N/A
2029	482	387	285	N/A	N/A
2031	1,875	1,406	1,406	14 ha	1,643 students

Despite the commercial and elementary school blocks being located within areas identified as being under 2029 phasing, it was assumed that both blocks would only generate site traffic once the entire subdivision is built-out under the 2031 horizon year.

The distribution of the site-generated traffic was based on a review of the 2016 Transportation Tomorrow Survey (TTS) with the trip distribution summarized in **Table 4** (without the GTA West Highway) and **Table 5** (with the GTA West Highway) below.

Table 4 Trips Distribution – Without GTA West Highway

Origin/Destination	AM Peak Hour		PM Peak Hour	
	Percentage of Inbound Trips	Percentage of Outbound Trips	Percentage of Inbound Trips	Percentage of Outbound Trips
South to Highway 410	30%	45%	45%	35%

Origin/Destination	AM Peak Hour		PM Peak Hour	
	Percentage of Inbound Trips	Percentage of Outbound Trips	Percentage of Inbound Trips	Percentage of Outbound Trips
West on Old School Road	4%	4%	4%	5%
East on Old School Road	1%	0%	0%	1%
North on McLaughlin Road	8%	5%	4%	5%
South on McLaughlin Road	16%	13%	14%	16%
North on Hurontario Street	10%	5%	4%	5%
South on Hurontario Street	15%	15%	15%	16%
South on Chinguacousy Road	16%	13%	14%	16%
Total	100%	100%	100%	100%

Table 5 Trips Distribution – With GTA West Highway

Origin/Destination	AM Peak Hour		PM Peak Hour	
	Percentage of Inbound Trips	Percentage of Outbound Trips	Percentage of Inbound Trips	Percentage of Outbound Trips
South to Highway 410	25%	35%	33%	30%
West on Old School Road	5%	5%	3%	5%
East on Old School Road	0%	0%	0%	0%
North on McLaughlin Road	8%	5%	3%	5%
South on McLaughlin Road	15%	10%	14%	15%
North on Hurontario Street	8%	5%	4%	5%
South on Hurontario Street	19%	25%	24%	20%
South on Chinguacousy Road	15%	10%	14%	15%

Origin/Destination	AM Peak Hour		PM Peak Hour	
	Percentage of Inbound Trips	Percentage of Outbound Trips	Percentage of Inbound Trips	Percentage of Outbound Trips
North on Hurontario to the GTA West Highway	5%	5%	5%	5%
Total	100%	100%	100%	100%

The estimated site trips generated by the subdivision and distributed to the study area road network for the weekday a.m. and p.m. peak hours are shown in **Figure 29**, **Figure 30**, and **Figure 31** for the 2026, 2029, and 2031 horizon year and beyond for the scenario without the GTA West Highway and **Figure 32**, **Figure 33**, and **Figure 34** for the 2026, 2029, and 2031 horizon year and beyond for the scenario with the proposed GTA West Highway within **Appendix A**.

The portion of the subject lands located to the east of McLaughlin Road has been assumed to have one access onto the external road network under the 2026 horizon year (McLaughlin Road and Street 'A'), a second access under the 2029 horizon year (Hurontario Street and Street 'A'), and a third access under the 2031 horizon year (Old School Road Street 'D'). Once multiple accesses have been constructed for this portion of the subject lands, site traffic was assigned to each access depending on the shortest route between the site and the external road network.

With only one access to the external road network under the 2026 horizon year, the shortest route between the subject site and Highway 410 would be provided through the new Highway 410/Hurontario Street interchange at Tim Manley as discussed in **Section 4.2.2**. Once a connection to Hurontario is established under the 2029 horizon year the site generated traffic would have its shortest route to Highway 410 provided through the new connection.

6. Future Total Traffic

The future total traffic conditions in the weekday a.m. and p.m. peak hours for the 2026, 2029, 2031, 2036, and 2041 planning horizons were derived by combining the projected future background traffic with the corresponding estimated site generated traffic. The resulting traffic volumes are presented in **Figure 36** to **Figure 39** for the scenario without the GTA West Highway and **Figure 40** to **Figure 44** for the scenario with the GTA West Highway within **Appendix A**.

7. Capacity Analysis

The capacity analysis identifies how well the intersections and driveways are operating. The analysis contained within this report utilized the Highway Capacity Manual (HCM) 2000 procedure within the Synchro Version 11 Software package. The reported intersection volume-to-capacity ratios (v/c) are a measure of the saturation volume for each turning movement, while the levels-of-service (LOS) are a measure of the average delay for each turning movement. Queuing characteristics are reported as the predicted 95th percentile queue for each turning movement. Both pedestrian crossing volumes and heavy vehicle proportions are included in the analyses. The peak hour factors from the existing traffic counts was used to analyze existing and future traffic conditions.

The analysis includes identification and required modifications and improvements (if any) at intersections where the addition of background growth or background growth plus site-generated traffic volumes causes the following:

'Critical' intersections and movements for a signalized or unsignalized intersection include:

- V/C ratios for overall intersections operations, through movements, or shared through/turning movements increase to 0.90 or above;
- V/C ratios for exclusive movements increase to 1.00 or above; or

- 95th percentile queue length for individual movements that are projected to, or exceed, the storage length.

The following tables summarize the HCM capacity results for the study intersections during the weekday a.m. and p.m. peak hours under existing (2024), future background (2026, 2029, 2031, 2036 & 2041) and future total (2026, 2029, 2031, 2036 & 2041) traffic conditions. The detailed calculation sheets are provided in **Appendix D**. The SimTraffic queuing reports are also provided in **Appendix D**.

7.1 Old School Road and Chinguacousy Road

Capacity analysis at this intersection during the weekday a.m. and p.m. peak hours for the existing, future background, and future total traffic condition are summarized in the following table.

Table 6 Capacity analysis of Old School Road and Chinguacousy Road (Without Highway 413)

Under existing conditions, the unsignalized intersection of Old School Road and Chinguacousy Road is reported to operate satisfactorily with substantial reserve capacity, low levels of delay and negligible queueing. All approaches are operating with delays of 9 seconds or less during the a.m. peak and 11 seconds or less during the p.m. peak.

With the addition of corridor growth and background traffic under the 2026 future background scenario, the intersection continues to operate at satisfactory levels. A westbound left-turn lane was provided in order to mitigate the delays for that movement. With the addition of site traffic from Phase 1 of the development, the intersection continues to operate satisfactory levels.

With the addition of corridor growth and background traffic under the 2029 future background scenario, the signalization of the intersection is required to accommodate future growth at the intersection. As a signalized

intersection, it operates with an overall v/c ratio of 0.45 LOS A during the a.m. peak hour and 0.67 LOS C during the p.m. peak hour with no critical movements.

Under the 2029 future total scenario, with the addition of site generated traffic, the intersection operates with an overall v/c ratio of 0.46 LOS A during the a.m. peak hour and 0.74 LOS C during the p.m. peak hour. The site continues to have a negligible impact on the operation of the intersection.

Under the 2031 future background condition, with the addition of corridor growth, background development traffic, and a northbound right-turn lane, the intersection operates with an overall v/c ratio of 0.38 LOS A during the a.m. peak hour and 0.51 LOS C during the p.m. peak hour.

With the addition of site generated traffic under the future total 2031 condition, the intersection is reported to operate with an overall v/c ratio of 0.51 LOS A during the a.m. peak hour and 0.65 LOS C during the p.m. peak hour. With the proposed northbound right-turn lane, the intersection is reported to continue to operate at satisfactory levels.

Under the ultimate horizon year, the intersection operates with an overall v/c ratio of 0.57 LOS B during the a.m. peak hour and 0.73 LOS C during the p.m. peak hour. Despite the critical operations during the p.m. peak hour, all movements as well as the overall intersection operates below a critical level during both peak hours.

7.2 Old School Road and McLaughlin Road

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the existing, future background, and future total traffic conditions out are summarized in the following table.

Under existing conditions, the unsignalized intersection of Old School Road and McLaughlin Road is reported to operate satisfactorily with substantial reserve capacity, low levels of delay and negligible queueing. All approaches are operating with delays of 12 seconds or less during the a.m. peak and 16 seconds or less during the p.m. peak.

With the continued operation of the intersection with an all-way stop-control under the 2026 future background condition, the intersection operates at satisfactory levels with a v/c ratio of 1.04 in the westbound through/right movement during the p.m. peak hour. In order to mitigate some of the delays, an auxiliary left-turn lane has been provided the westbound approach and a right-turn lane in the northbound approach in order to accommodate future volumes generated by corridor growth and background developments.

With the addition of Phase 1 site generated traffic under the 2026 horizon year, the intersection continues to operate at a similar level under the future total scenario as it did under the future background condition.

In order to accommodate future traffic levels, the intersection was converted to a signalized intersection under the 2029 future background scenario. As a signalized intersection, it operates with an overall v/c ratio of 0.55 LOS C during the a.m. peak hour and 0.65 LOS B during the p.m. peak hour without any critical movements.

With the addition of site generated traffic from Phases 1-4, the intersection continues to operate at satisfactory levels with an overall v/c ratio of 0.61 LOS C during the a.m. peak hour and 0.80 LOS C during the p.m. peak hour.

Under the remaining horizon years, with the addition of corridor growth and background development traffic under the future background scenarios and the site generated under the future total scenarios, the intersection continues to operate at satisfactory levels. Under the ultimate future total scenario, the intersection operates at critical levels during the p.m. peak hour, and reports v/c ratios of 0.78 LOS C and 0.93 LOS C respectively, however they remain below the theoretical capacity levels during both peak hours.

7.3 Old School Road and Hurontario Street

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the existing, future background, and future total traffic conditions are summarized in the following table.

Under existing conditions, the intersection of Old School Road and Hurontario Street is reported to operate with an overall v/c ratio of 0.87 LOS C during the a.m. peak hour and 0.77 LOS C during the p.m. peak hour. The intersection operates without any critical movements during either the a.m. or p.m. peak hours.

Under the 2026 future background scenario, with the addition of corridor growth and some background development traffic, the intersection operates with an overall v/c ratio of 0.97 LOS C during the a.m. peak hour and 1.10 LOS D during the p.m. peak hour. In order to accommodate the future traffic volumes along Hurontario Street, a widening of Hurontario to a 6-lane cross-section was assumed and is consistent with previously submitted traffic studies from neighbour developments. With the widening, the westbound left-turn lane during the a.m. peak hour and eastbound left-turn lane during the p.m. peak hour are reported to continue to operate above capacity.

With the addition of site generated traffic from Phase 1 of the development, the intersection is reported to operate at a similar level as reported under the future background scenario with an overall v/c ratio of 0.97 LOS C and 1.09 LOS D during the a.m. and p.m. peak hours respectively. Both movements that were reported to operate above capacity continue to operate above capacity with no additional movements above capacity reported.

With continued corridor growth and background development traffic under the 2029 horizon year, the intersection is reported to operate with an overall v/c ratio of 1.10 LOS E during the a.m. peak hour and 1.38 LOS F during the p.m. peak hour with numerous movements reported to operate above capacity. With the addition of site generated traffic from Phases 1 through 4, the intersection continues to operate at similar levels under the 2029 future total scenario.

In order to accommodate further growth and background development traffic, a widening along Old School Road to a four-lane cross-section has been assumed to mitigate some of the delays in the east/west direction under the 2029 horizon year. The proposed development continues to have a marginal impact on the operation of the intersection.

With all background traffic and further corridor growth applied under the remaining horizon years, in addition to site generated traffic from the full build-out of the subject site, the intersection continues to operate above capacity. It is recommended that the MTO continues to monitor the intersection as development proceeds to identify where capacity is required.

7.4 Mayfield Road and Chinguacousy Road

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the existing, future background, and future total traffic conditions out are summarized in the following table.

Table 9 Capacity analysis of Mayfield Road and Chinguacousy Road (Without Highway 413)

Future Total 2041	<u>Overall: 0.9 (C) 32</u> EBTLR = 0.74 (D) 36 WBL = 0.77 (C) 32 WBTR = 0.33 (B) 18 NBTL = 0.45 (B) 20 NBR = 0.12 (B) 16 SBTLR = 0.97 (D) 55	EBTLR = 95 m WBL = 80 m WBTR = 60 m NBTL = 70 m NBR = 10 m SBTLR = 185 m	<u>Overall: 0.88 (C) 34</u> EBTLR = 0.82 (D) 44 WBL = 0.88 (D) 51 WBTR = 0.42 (C) 22 NBTL = 0.77 (C) 31 NBR = 0.19 (B) 18 SBTLR = 0.86 (D) 40	EBTLR = 115 m WBL = 105 m WBTR = 75 m NBTL = 170 m NBR = 20 m SBTLR = 150 m

Under existing conditions, the intersection of Mayfield Road and Chinguacousy Road is reported to operate with an overall v/c ratio of 0.60 LOS B during the a.m. peak hour and 0.78 LOS C during the p.m. peak hour with no critical movements.

With the proposed widening along Mayfield Road, along with the addition of corridor growth and background traffic under the 2026 future background scenario, the v/c ratio has been reduced to 0.41 LOS C during the a.m. peak hour and 0.52 LOS C during the p.m. peak hour. With the addition of site generated traffic from Phase 1 of the development, the overall v/c ratio is reported to slightly increase to 0.42 LOS C and 0.53 LOS C during the a.m. and p.m. peak hour, respectively.

A similar trend is observed under the 2029 horizon year, where the overall v/c ratio is reported at 0.47 LOS C during the a.m. peak hour and 0.59 LOS C during the p.m. peak hour. With the addition of site traffic from Phases 1-4, the overall v/c ratio is reported to increase to 0.51 LOS C during the a.m. peak hour and 0.66 LOS C during the p.m. peak hour.

With further growth along Mayfield Road due to corridor growth and background traffic, as well as additional volume added to the westbound left-turn movement from the full build-out of the site, it is projected that a westbound left-turn lane is included in the widening of Mayfield Road to accommodate future traffic at the intersection.

Under the ultimate horizon year, the overall v/c ratio of the intersection is reported 0.69 LOS C and 0.69 LOS C during the a.m. and p.m. peak hour under the 2041 future background scenario and is anticipated to increase to 0.90 LOS C and 0.88 LOS D during the a.m. and p.m. peak hour under the 2041 future total scenario.

7.5 Mayfield Road and McLaughlin Road

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the existing, future background, and future total traffic conditions out are summarized in the following table.

Table 10 Capacity analysis of Mayfield Road and McLaughlin Road (Without Highway 413)

Under existing conditions, the intersection of Mayfield Road and McLaughlin Road is reported to operate with an overall v/c ratio of 0.60 LOS C during the a.m. peak hour and 0.69 LOS C during the p.m. peak hour with no critical movements.

With the proposed widening along Mayfield Road assumed to occur under the 2026 horizon year, the intersection operates with an overall v/c ratio of 0.52 LOS C during the a.m. peak hours and 0.60 LOS C during the p.m. peak hour. With the addition of Phase 1 site traffic, the intersection continues to operate at a satisfactory level with a marginal increase to the v/c ratios, delay, and queuing.

With the continued addition of background traffic and corridor growth under the remaining horizon years, the intersection continues to operate at satisfactory levels. With the addition of site traffic from Phases 1-4 under the 2029 horizon year and full build-out of the site under the remaining horizon years, the intersection continues to operate at satisfactory levels.

With the widening of Mayfield Road and the preferred alternative from the Class EA of a widening along McLaughlin Road, no additional geometric changes are recommended for the intersection as a result of the subject site.

7.6 Mayfield Road and Hurontario Street

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the existing, future background, and future total traffic conditions are summarized in the following table.

Under existing conditions, the intersection of Mayfield Road and Hurontario Street is reported to operate with an overall v/c ratio of 0.52 LOS C during the a.m. peak hour and 0.60 LOS C during the p.m. peak hour. Only the eastbound left movement is reported to operate at a critical level and above capacity during the p.m. peak hour.

With the proposed widening along Mayfield Road, along with the addition of corridor growth and background traffic under future background scenarios, the intersection is reported to operate satisfactorily only under the 2026 horizon year.

As the traffic levels continue to increase at the intersection, the overall intersection begins to operate over capacity during the p.m. peak hour under the 2029 horizon year while remaining below capacity despite being at a critical level during the a.m. peak hour. Similar to the intersection of Hurontario Street and Old School Road, it is recommended that the Region of Peel continue to monitor the operation of the intersection as development in the area proceeds to identify where capacity is needed and possible improvements to the intersection to provide the necessary capacity.

7.7 McLaughlin Road and Street A

Capacity analysis at this intersection during the weekday a.m. and p.m. peak hours for the future total traffic condition are summarized in the following table.

Table 12 Capacity analysis of McLaughlin Road and Street A

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 th % Que.	V/C (LOS) seconds	95 th % Que

Under the future total traffic conditions in 2026 and 2029, the intersection of McLaughlin Road and Street A operates satisfactorily as an unsignalized intersection. With the addition of corridor growth, background development traffic and the site generated traffic under the 2031, 2036, and 2041 horizon years, it is recommended to have the intersection be converted to a signalized intersection in order to mitigate delays.

7.8 Hurontario Street and Street A

Capacity analysis at this intersection during the weekday a.m. and p.m. peak hours for the future total traffic condition are summarized in the following table.

Table 13 Capacity analysis of Hurontario Street and Street A

As per the memorandum provided by the Town of Caledon's Transportation Engineering Public Works & Transportation Department, dated February 2024, Town Transportation Staff are engaging with MTO staff in discussions on the proposed connection of Dougal Avenue to Highway 10 at the Council's direction and the residents' request. Street A at Hurontario Street is proposed to line up with Dougal Avenue and as a result, GHD modelled the intersection of Street A at Hurontario as a signalized intersection.

Under the 2029 horizon year, the signalized intersection of Street A and Hurontario Street is reported to operate at satisfactory levels with an overall v/c ratio of 0.82 LOS B and 0.90 LOS B during the a.m. and p.m. peak hours. Under the 2031, 2036, and 2041 horizon year, the intersection is reported to operate over capacity with the overall intersection, eastbound right-turn and southbound approach operate over capacity.

With the construction of the new Highway 410/Hurontario Street interchange with Tim Manley, some of the site generated traffic may choose to use an alternate route to access the interchange in order to avoid the 248 second delay reported during the a.m. peak hour under the 2041 future total scenario.

7.9 Chinguacousy Road and Street A

Capacity analysis at this intersection during the weekday a.m. and p.m. peak hours for the future total traffic condition are summarized in the following table.

Table 14 Capacity analysis of Chinguacousy Road and Street A

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 th % Que.	V/C (LOS) seconds	95 th % Que

Under all future total traffic conditions (2031, 2036, and 2041), the intersection of Chinguacousy Road and Street A is reported to operate satisfactorily with substantial reserve capacity, low levels of delay and negligible queueing during the a.m. peak hour.

7.10 Old School Road and Street B

Capacity analysis at this intersection during the weekday a.m. and p.m. peak hours for the future total traffic condition are summarized in the following table.

Table 15 Capacity analysis of Old School Road and Street B

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 th % Que.	V/C (LOS) seconds	95 th % Que
Future Total 2031	EBT = 0.25 (A) 0 EBTR = 0.15 (A) 0 WBTL = 0.02 (A) 1 WBT = 0.18 (A) 0 NBLR = 0.3 (C) 20	EBT = 0 m EBTR = 0 m WBTL = 5 m WBT = 0 m NBLR = 10 m	EBT = 0.29 (A) 0 EBTR = 0.18 (A) 0 WBTL = 0.04 (A) 2 WBT = 0.31 (A) 0 NBLR = 0.31 (D) 27	EBT = 0 m EBTR = 0 m WBTL = 5 m WBT = 0 m NBLR = 10 m

Future Total 2041	EBT = 0.51 (A) 0 EBTR = 0.27 (A) 0 WBTL = 0.09 (A) 3 WBT = 0.3 (A) 0 NBL = 0.45 (C) 80 NBR = 0.26 (A) 11	EBT = 0 m EBTR = 0 m WBTL = 5 m WBT = 0 m NBL = 15 m NBR = 10 m	EBT = 0.52 (A) 0 EBTR = 0.29 (A) 0 WBTL = 0.28 (A) 7 WBT = 0.53 (A) 0 NBL = 1.62 (F) 661 NBR = 0.15 (A) 10	EBT = 0 m EBTR = 0 m WBTL = 10 m WBT = 0 m NBL = 40 m NBR = 5 m

Under all future total traffic conditions (2031, 2036, and 2041), the intersection of Old School Road and Street D is reported to operate satisfactorily with substantial reserve capacity, low levels of delay and negligible queueing during the a.m. peak hour. During the p.m. peak hour, the northbound approach is operating above capacity. With a signalized intersection to the west, drivers may opt to travel in the westbound direction via McLaughlin Road to then turn left at Old School Road.

7.12 McLaughlin Road and Street E

Capacity analysis at this intersection during the weekday a.m. and p.m. peak hours for the future total traffic condition are summarized in the following table.

Table 17 Capacity analysis of McLaughlin Road and Street E

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 th % Que.	V/C (LOS) seconds	95 th % Que
Future Total 2031	EBTLR = 0.12 (B) 13 WBTLR = 0.32 (D) 26 NBT = 0.02 (A) 1 NBT = 0.2 (A) 0 SBT = 0.01 (A) 0 SBT = 0.15 (A) 0	EBTLR = 5 m WBTLR = 10 m NBT = 5 m NBT = 0 m SBT = 5 m SBT = 0 m	EBTLR = 0.11 (B) 15 WBTLR = 0.31 (D) 34 NBT = 0.06 (A) 2 NBT = 0.27 (A) 0 SBT = 0.03 (A) 1 SBT = 0.21 (A) 0	EBTLR = 5 m WBTLR = 10 m NBT = 5 m NBT = 0 m SBT = 5 m SBT = 0 m

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 th % Que.	V/C (LOS) seconds	95 th % Que
Future Total 2036	EBTLR = 0.13 (B) 13 WBTLR = 0.33 (D) 28 NBT = 0.02 (A) 1 NBT = 0.2 (A) 0 SBT = 0.01 (A) 0 SBT = 0.16 (A) 0	EBTLR = 5 m WBTLR = 10 m NBT = 5 m NBT = 0 m SBT = 5 m SBT = 0 m	EBTLR = 0.11 (B) 15 WBTLR = 0.32 (E) 36 NBT = 0.06 (A) 2 NBT = 0.28 (A) 0 SBT = 0.03 (A) 1 SBT = 0.21 (A) 0	EBTLR = 5 m WBTLR = 10 m NBT = 5 m NBT = 0 m SBT = 5 m SBT = 0 m
Future Total 2041	EBTLR = 0.13 (B) 14 WBTLR = 0.34 (D) 29 NBT = 0.02 (A) 1 NBT = 0.21 (A) 0 SBT = 0.01 (A) 0 SBT = 0.16 (A) 0	EBTLR = 5 m WBTLR = 15 m NBT = 5 m NBT = 0 m SBT = 5 m SBT = 0 m	EBTLR = 0.11 (C) 15 WBTLR = 0.35 (E) 40 NBT = 0.06 (A) 2 NBT = 0.28 (A) 0 SBT = 0.03 (A) 1 SBT = 0.22 (A) 0	EBTLR = 5 m WBTLR = 15 m NBT = 5 m NBT = 0 m SBT = 5 m SBT = 0 m

Under all future total traffic conditions (2031, 2036, and 2041), the intersection of McLaughlin Road and Street E is reported to operate satisfactorily with substantial reserve capacity, low levels of delay and negligible queueing during both peak hours.

7.13 Old School Road and Street F

Capacity analysis at this intersection during the weekday a.m. and p.m. peak hours for the future total traffic condition are summarized in the following table.

Table 18 Capacity analysis of Old School Road and Street F

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 th % Que.	V/C (LOS) seconds	95 th % Que
Future Total 2031	EBT = 0.28 (A) 0 EBTR = 0.14 (A) 0 WBTL = 0.08 (A) 3 WBT = 0.2 (A) 0 NBLR = 0.44 (C) 16	EBT = 0 m EBTR = 0 m WBTL = 5 m WBT = 0 m NBLR = 20 m	EBT = 0.33 (A) 0 EBTR = 0.17 (A) 0 WBTL = 0.27 (A) 7 WBT = 0.35 (A) 0 NBLR = 0.4 (C) 24	EBT = 0 m EBTR = 0 m WBTL = 10 m WBT = 0 m NBLR = 15 m
Future Total 2036	EBT = 0.29 (A) 0 EBTR = 0.15 (A) 0 WBTL = 0.08 (A) 3 WBT = 0.21 (A) 0 NBLR = 0.45 (C) 17	EBT = 0 m EBTR = 0 m WBTL = 5 m WBT = 0 m NBLR = 20 m	EBT = 0.34 (A) 0 EBTR = 0.18 (A) 0 WBTL = 0.28 (A) 7 WBT = 0.36 (A) 0 NBLR = 0.42 (D) 25	EBT = 0 m EBTR = 0 m WBTL = 10 m WBT = 0 m NBLR = 15 m
Future Total 2041	EBT = 0.31 (A) 0 EBTR = 0.16 (A) 0 WBTL = 0.08 (A) 3 WBT = 0.22 (A) 0 NBLR = 0.47 (C) 18	EBT = 0 m EBTR = 0 m WBTL = 5 m WBT = 0 m NBLR = 20 m	EBT = 0.35 (A) 0 EBTR = 0.18 (A) 0 WBTL = 0.28 (A) 7 WBT = 0.38 (A) 0 NBLR = 0.45 (D) 27	EBT = 0 m EBTR = 0 m WBTL = 10 m WBT = 0 m NBLR = 20 m

Under all future total traffic conditions (2031, 2036, and 2041), the intersection of Old School Road and Street F is reported to operate satisfactorily with substantial reserve capacity, low levels of delay and negligible queueing during both peak hours.

8. Sensitivity Analysis with the Highway 413

GHD also completed a sensitivity analysis for the capacity analysis of the study intersections assuming construction of the planned Highway 413 is completed. Based on the trip distribution in **Table 4** (without Highway 413) and **Table 5** (with Highway 413), the provision of the highway would result in a slight change in the distribution for the site generated traffic as well as for the traffic generated by the Mayfield West Phase 1 Stage 2 background development. The sensitivity analysis did not consider the reduction in traffic along Hurontario Street at Old School Road that is likely to occur should the northerly extension of Highway 410 towards Highway 413 be completed to the east of Hurontario Street.

8.1 Old School Road and Chinguacousy Road

Capacity analysis at this intersection during the weekday a.m. and p.m. peak hours for the existing, future background, and future total traffic condition are summarized in the following table.

Table 19 Capacity analysis of Old School Road and Chinguacousy Road

Under existing conditions, the unsignalized intersection of Old School Road and Chinguacousy Road is reported to operate satisfactorily with substantial reserve capacity, low levels of delay and negligible queueing. All approaches are operating with delays of 9 seconds or less during the a.m. peak and 11 seconds or less during the p.m. peak.

With the addition of corridor growth and background traffic under the 2026 future background scenario, the intersection continues to operate at satisfactory levels. With the addition of site traffic from Phase 1 of the development.

With the addition of corridor growth and background traffic under the 2029 future background scenario, the signalization of the intersection is required to accommodate future growth at the intersection. As a signalized intersection, it operates with an overall v/c ratio of 0.44 LOS A during the a.m. peak hour and 0.66 LOS C during the p.m. peak hour with no critical movements.

Under the 2029 future total scenario, with the addition of site generated traffic, the intersection operates with an overall v/c ratio of 0.45 LOS A during the a.m. peak hour and 0.67 LOS C during the p.m. peak hour. The site continues to have a negligible impact on the operation of the intersection.

Under the 2031 future background condition, with the addition of corridor growth, background development traffic, and a northbound right-turn lane to further mitigate delays, the intersection operates with an overall v/c ratio of 0.37 LOS C during the a.m. peak hour and 0.51 LOS C during the p.m. peak hour.

With the addition of site generated traffic under the future total 2031 condition, the intersection is reported to operate with an overall v/c ratio of 0.47 LOS A during the a.m. peak hour and 0.62 LOS C during the p.m. peak hour.

Under the ultimate horizon year, the intersection operates with an overall v/c ratio of 0.53 LOS A during the a.m. peak hour and 0.70 LOS C during the p.m. peak hour.

8.2 Old School Road and McLaughlin Road

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the existing, future background, and future total traffic conditions out are summarized in the following table.

Table 20 Capacity analysis of Old School Road and McLaughlin Road (With Highway 413)

Under existing conditions, the unsignalized intersection of Old School Road and McLaughlin Road is reported to operate satisfactorily with substantial reserve capacity, low levels of delay and negligible queueing. All approaches are operating with delays of 12 seconds or less during the a.m. peak and 16 seconds or less during the p.m. peak.

With the continued operation of the intersection with an all-way stop-control under the 2026 future background condition, the intersection operates at satisfactory levels with a v/c ratio of 1.04 in the westbound through/right movement during the p.m. peak hour. In order to mitigate some of the delays, an auxiliary left-turn lane has been provided the westbound approach and a right-turn lane in the northbound approach in order to accommodate future volumes generated by corridor growth and background developments.

With the addition of Phase 1 site generated traffic under the 2026 horizon year, the intersection continues to operate at a similar level under the future total scenario as it did under the future background condition.

In order to accommodate future traffic levels, the intersection was converted to a signalized intersection under the 2029 future background scenario. As a signalized intersection, it operates with an overall v/c ratio of 0.54 LOS C during the a.m. peak hour and 0.64 LOS B during the p.m. peak hour without any critical movements.

With the addition of site generated traffic from Phases 1-4, the intersection continues to operate at satisfactory levels with an overall v/c ratio of 0.56 LOS C during the a.m. peak hour and 0.67 LOS C during the p.m. peak hour.

Under the remaining horizon years, with the addition of corridor growth and background development traffic under the future background scenarios and the site generated under the future total scenarios, the intersection continues to operate at satisfactory levels. Under the ultimate future total scenario, the intersection operates just below critical levels during both peak hours with v/c ratios of 0.76 LOS C and 0.90 LOS D respectively, however they remain below the theoretical capacity levels during both peak hours.

8.3 Old School Road and Hurontario Street

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the existing, future background, and future total traffic conditions are summarized in the following table.

Table 21 Capacity analysis of Old School Road and Hurontario Street (With Highway 413)

Under existing conditions, the intersection of Old School Road and Hurontario Street is reported to operate with an overall v/c ratio of 0.87 LOS C during the a.m. peak hour and 0.77 LOS C during the p.m. peak hour. The intersection operates without any critical movements during either the a.m. or p.m. peak hours.

Under the 2026 future background scenario, with the addition of corridor growth and some background development traffic, the intersection operates with an overall v/c ratio of 0.96 LOS C during the a.m. peak hour and 1.5 LOS D during the p.m. peak hour. In order to accommodate the future traffic volumes along Hurontario Street, a widening of Hurontario to a 6-lane cross-section was assumed and is consistent with previously submitted traffic studies from neighbour developments. With the widening, the westbound left-turn lane during the a.m. peak hour and eastbound left-turn lane during the p.m. peak hour are reported to continue to operate above capacity.

With the addition of site generated traffic from Phase 1 of the development, the intersection is reported to operate at a similar level as reported under the future background scenario with an overall v/c ratio of 0.97 LOS C and 1.49 LOS D

during the a.m. and p.m. peak hours respectively. Both movements that were reported to operate above capacity continue to operate above capacity with no additional movements above capacity reported.

With continued corridor growth and background development traffic, the intersection is reported to operate with an overall v/c ratio of 1.31 LOS E during the a.m. peak hour and 1.41 LOS F during the p.m. peak hour with numerous movements reported to operate above capacity. With the addition of site generated traffic from Phases 1 through 4, the intersection continues to operate at similar levels under the 2029 future total scenario.

In order to accommodate further growth and background development traffic, a widening along Old School Road to a four-lane cross-section has been assumed to mitigate some of the delays in the east/west direction under the 2029 horizon year. The proposed development continues to have a marginal impact on the operation of the intersection.

With all background traffic and further corridor growth applied under the remaining horizon years, in addition to site generated traffic from the full build-out of the subject site, the intersection continues to operate above capacity. It is recommended that the MTO continues to monitor the operation of the intersection and provide mitigations once the intersection begins to operate above capacity.

Included within the proposed Highway 413 construction project (GTA West Corridor), Highway 410 is proposed to be extended north to the proposed Highway and will no longer terminate at Hurontario Street. As a result, through volumes and the north/south direction should reduce if this new alignment is constructed. Further study will be required to evaluate the impact of the Highway 413 project along Hurontario Street corridor within the study area.

8.4 Mayfield Road and Chinguacousy Road

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the existing, future background, and future total traffic conditions out are summarized in the following table.

Future Total 2041	<u>Overall: 0.86 (C) 31</u> EBTLR = 0.69 (C) 33 WBL = 0.71 (C) 26 WBTR = 0.31 (B) 17 NBTL = 0.46 (C) 21 NBR = 0.12 (B) 18 SBTLR = 0.97 (E) 57	EBTLR = 95 m WBL = 65 m WBTR = 55 m NBTL = 70 m NBR = 15 m SBTLR = 185 m	<u>Overall: 0.87 (C) 34</u> EBTLR = 0.81 (D) 43 WBL = 0.86 (D) 45 WBTR = 0.42 (C) 22 NBTL = 0.78 (C) 31 NBR = 0.19 (B) 19 SBTLR = 0.87 (D) 42	EBTLR = 115 m WBL = 100 m WBTR = 75 m NBTL = 170 m NBR = 20 m SBTLR = 150 m

Under existing conditions, the intersection of Mayfield Road and Chinguacousy Road is reported to operate with an overall v/c ratio of 0.60 LOS B during the a.m. peak hour and 0.78 LOS C during the p.m. peak hour with no critical movements.

With the proposed widening along Mayfield Road, along with the addition of corridor growth and background traffic under the 2026 future background scenario, the v/c ratio has been reduced to 0.41 LOS C during the a.m. peak hour and 0.52 LOS C during the p.m. peak hour. With the addition of site generated traffic from Phase 1 of the development, the overall v/c ratio is reported to slightly increase to 0.41 LOS C and 0.53 LOS C during the a.m. and p.m. peak hour, respectively.

A similar trend is observed under the 2029 horizon year, where the overall v/c ratio is reported at 0.47 LOS C during the a.m. peak hour and 0.59 LOS C during the p.m. peak hour under the 2029 future background condition. With the addition of site traffic from Phases 1-4, the overall v/c ratio is reported to increase to 0.49 LOS C during the a.m. peak hour and 0.65 LOS C during the p.m. peak hour.

With further growth along Mayfield Road due to corridor growth and background traffic, as well as additional volume added to the westbound left-turn movement from the full build-out of the site, it is projected that a westbound left-turn lane is included in the widening of Mayfield Road to accommodate future traffic at the intersection.

Under the ultimate horizon year, the overall v/c ratio of the intersection is reported 0.69 LOS C and 0.69 LOS C during the a.m. and p.m. peak hour under the 2041 future background scenario and is anticipated to increase to 0.86 LOS C and 0.87 LOS C during the a.m. and p.m. peak hour under the 2041 future total scenario.

8.5 Mayfield Road and McLaughlin Road

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the existing, future background, and future total traffic conditions out are summarized in the following table.

Under existing conditions, the intersection of Mayfield Road and McLaughlin Road is reported to operate with an overall v/c ratio of 0.60 LOS C during the a.m. peak hour and 0.69 LOS C during the p.m. peak hour with no critical movements.

With the proposed widening along Mayfield Road assumed to occur under the 2026 horizon year, the intersection operates with an overall v/c ratio of 0.52 LOS C during the a.m. peak hours and 0.60 LOS C during the p.m. peak hour. With the addition of Phase 1 site traffic, the intersection continues to operate at a satisfactory level with a marginal increase to the v/c ratios, delay, and queuing.

With the continued addition of background traffic and corridor growth under the remaining horizon years, the intersection continues to operate at satisfactory levels. With the addition of site traffic from Phases 1-4 under the 2029 horizon year and full build-out of the site under the remaining horizon years, the intersection continues to operate at satisfactory levels.

With the widening of Mayfield Road and the preferred alternative from the Class EA of a widening along McLaughlin Road, no additional geometric changes are recommended for the intersection as a result of the subject site.

8.6 Mayfield Road and Hurontario Street

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the existing, future background, and future total traffic conditions are summarized in the following table.

Table 24 Capacity analysis of Mayfield Road and Hurontario Street (With Highway 413)

Under existing conditions, the intersection of Mayfield Road and Hurontario Street is reported to operate with an overall v/c ratio of 0.52 LOS C during the a.m. peak hour and 0.60 LOS C during the p.m. peak hour. Only the eastbound left movement is reported to operate at a critical level and above capacity during the p.m. peak hour.

With the proposed widening along Mayfield Road, along with the addition of corridor growth and background traffic under future background scenarios, the intersection is reported to operate satisfactorily only under the 2026 horizon year.

As the traffic levels continue to increase at this intersection, the overall intersection begins to operate over capacity during the p.m. peak hour under the 2029 horizon year while remaining below capacity despite being at a critical level during the a.m. peak hour. Similar to the intersection of Hurontario Street and Old School Road, it is recommended that the Region of Peel continue to monitor the operation of the intersection as development proceeds to identify where capacity constraints are introduced and potential mitigation measures.

8.7 McLaughlin Road and Street A

Capacity analysis at this intersection during the weekday a.m. and p.m. peak hours for the future total traffic condition are summarized in the following table.

Table 25 Capacity analysis of McLaughlin Road and Street A

Under the future total traffic conditions in 2026 and 2029, the intersection of McLaughlin Road and Street A operates satisfactorily as an unsignalized intersection. With the addition of corridor growth, background development traffic and the site generated traffic under the 2031, 2036, and 2041 horizon years, it is recommended to have the intersection converted to a signalized intersection in order to mitigate delays.

8.8 Hurontario Street and Street A

Capacity analysis at this intersection during the weekday a.m. and p.m. peak hours for the future total traffic condition are summarized in the following table.

Table 26 Capacity analysis of Hurontario Street and Street A

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 th % Que.	V/C (LOS) seconds	95 th % Que

Under the 2029 horizon year, the signalized intersection of Street A and Hurontario Street is reported to operate at satisfactory levels with an overall v/c ratio of 0.80 LOS B and 0.87 LOS B during the a.m. and p.m. peak hours. Under the 2031, 2036, and 2041 horizon year, the intersection is reported to operate over capacity with the overall intersection, eastbound right-turn and southbound approach operate over capacity.

With the construction of the new Highway 410/Hurontario Street interchange with Tim Manley, some of the site generated traffic may choose to use an alternate route to access the interchange in order to avoid the 196 second delay reported during the a.m. peak hour under the 2041 future total scenario.

8.9 Chinguacousy Road and Street A

Capacity analysis at this intersection during the weekday a.m. and p.m. peak hours for the future total traffic condition are summarized in the following table.

Table 27 Capacity analysis of Chinguacousy Road and Street A

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 th % Que.	V/C (LOS) seconds	95 th % Que
Future Total 2031	WBL = 0.44 (D) 32 WBR = 0.08 (A) 13 NBTR = 0.38 (A) 0 SBTL = 0.02 (A) 0	WBL = 15 m WBR = 5 m NBTR = 0 m SBTL = 5 m	WBL = 0.84 (F) 123 WBR = 0.06 (A) 17 NBTR = 0.6 (A) 0 SBTL = 0.03 (A) 1	WBL = 40 m WBR = 5 m NBTR = 0 m SBTL = 5 m
Future Total 2036	WBL = 0.45 (D) 34 WBR = 0.08 (A) 13 NBTR = 0.38 (A) 0 SBTL = 0.02 (A) 0	WBL = 20 m WBR = 5 m NBTR = 0 m SBTL = 5 m	WBL = 0.88 (F) 136 WBR = 0.06 (A) 18 NBTR = 0.61 (A) 0 SBTL = 0.03 (A) 1	WBL = 40 m WBR = 5 m NBTR = 0 m SBTL = 5 m

Under all future total traffic conditions (2031, 2036, and 2041), the intersection of Chinguacousy Road and Street A is reported to operate satisfactorily with substantial reserve capacity, low levels of delay and negligible queueing during the a.m. peak hour.

8.10 Old School Road and Street B

Capacity analysis at this intersection during the weekday a.m. and p.m. peak hours for the future total traffic condition are summarized in the following table.

Table 28 Capacity analysis of Old School Road and Street B

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 th % Que.	V/C (LOS) seconds	95 th % Que
Future Total 2031	EBT = 0.24 (A) 0 EBTR = 0.13 (A) 0 WBTL = 0.01 (A) 1 WBT = 0.17 (A) 0 NBLR = 0.2 (C) 18	EBT = 0 m EBTR = 0 m WBTL = 5 m WBT = 0 m NBLR = 5 m	EBT = 0.28 (A) 0 EBTR = 0.17 (A) 0 WBTL = 0.04 (A) 1 WBT = 0.31 (A) 0 NBLR = 0.27 (C) 25	EBT = 0 m EBTR = 0 m WBTL = 5 m WBT = 0 m NBLR = 10 m
Future Total 2036	EBT = 0.26 (A) 0 EBTR = 0.14 (A) 0 WBTL = 0.01 (A) 1 WBT = 0.18 (A) 0 NBLR = 0.21 (C) 19	EBT = 0 m EBTR = 0 m WBTL = 5 m WBT = 0 m NBLR = 10 m	EBT = 0.29 (A) 0 EBTR = 0.18 (A) 0 WBTL = 0.04 (A) 1 WBT = 0.32 (A) 0 NBLR = 0.28 (D) 27	EBT = 0 m EBTR = 0 m WBTL = 5 m WBT = 0 m NBLR = 10 m

Future Total 2041	EBT = 0.51 (A) 0 EBTR = 0.27 (A) 0 WBTL = 0.09 (A) 3 WBT = 0.29 (A) 0 NBL = 0.46 (C) 78 NBR = 0.28 (A) 12	EBT = 0 m EBTR = 0 m WBTL = 5 m WBT = 0 m NBL = 15 m NBR = 10 m	EBT = 0.47 (A) 0 EBTR = 0.26 (A) 0 WBTL = 0.26 (A) 7 WBT = 0.55 (A) 0 NBL = 1.39 (F) 525 NBR = 0.14 (A) 10	EBT = 0 m EBTR = 0 m WBTL = 10 m WBT = 0 m NBL = 35 m NBR = 5 m

Under all future total traffic conditions (2031, 2036, and 2041), the intersection of Old School Road and Street D is reported to operate satisfactorily with substantial reserve capacity, low levels of delay and negligible queueing during the a.m. peak hour. During the p.m. peak hour, the northbound approach is operating above capacity. With a signalized intersection to the west, drivers may opt to travel in the westbound direction via McLaughlin Road to then turn left at Old School Road.

8.12 McLaughlin Road and Street E

Capacity analysis at this intersection during the weekday a.m. and p.m. peak hours for the future total traffic condition are summarized in the following table.

Table 30 Capacity analysis of McLaughlin Road and Street E

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 th % Que.	V/C (LOS) seconds	95 th % Que
Future Total 2031	EBTLR = 0.11 (B) 13 WBTLR = 0.25 (C) 22 NBT = 0.02 (A) 1 NBT = 0.19 (A) 0 SBT = 0.01 (A) 0 SBT = 0.15 (A) 0	EBTLR = 5 m WBTLR = 10 m NBT = 5 m NBT = 0 m SBT = 5 m SBT = 0 m	EBTLR = 0.11 (A) 0 WBTLR = 0.25 (A) 0 NBT = 0 (A) 0 NBT = 0.19 (A) 0 SBT = 0 (A) 0 SBT = 0.15 (A) 0	EBTLR = 0 m WBTLR = 0 m NBT = 0 m NBT = 0 m SBT = 0 m SBT = 0 m

Future Total 2041	EBTLR = 0.11 (B) 14 WBTLR = 0.27 (C) 24 NBT = 0.02 (A) 1 NBT = 0.21 (A) 0 SBT = 0.01 (A) 0 SBT = 0.16 (A) 0	EBTLR = 5 m WBTLR = 10 m NBT = 5 m NBT = 0 m SBT = 5 m SBT = 0 m	EBTLR = 0.11 (C) 15 WBTLR = 0.33 (E) 38 NBT = 0.06 (A) 2 NBT = 0.28 (A) 0 SBT = 0.02 (A) 1 SBT = 0.22 (A) 0	EBTLR = 5 m WBTLR = 10 m NBT = 5 m NBT = 0 m SBT = 5 m SBT = 0 m

Under all future total traffic conditions (2031, 2036, and 2041), the intersection of McLaughlin Road and Street E is reported to operate satisfactorily with substantial reserve capacity, low levels of delay and negligible queueing during both peak hours.

8.13 Old School Road and Street F

Capacity analysis at this intersection during the weekday a.m. and p.m. peak hours for the future total traffic condition are summarized in the following table.

Table 31 Capacity analysis of McLaughlin Road and Street F

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 th % Que.	V/C (LOS) seconds	95 th % Que
Future Total 2031	EBT = 0.27 (A) 0 EBTR = 0.14 (A) 0 WBTL = 0.08 (A) 4 WBT = 0.19 (A) 0 NBLR = 0.48 (C) 18	EBT = 0 m EBTR = 0 m WBTL = 5 m WBT = 0 m NBLR = 20 m	EBT = 0.32 (A) 0 EBTR = 0.17 (A) 0 WBTL = 0.27 (A) 7 WBT = 0.34 (A) 0 NBLR = 0.38 (C) 23	EBT = 0 m EBTR = 0 m WBTL = 10 m WBT = 0 m NBLR = 15 m
Future Total 2036	EBT = 0.27 (A) 0 EBTR = 0.14 (A) 0 WBTL = 0.08 (A) 4 WBT = 0.19 (A) 0 NBLR = 0.48 (C) 18	EBT = 0 m EBTR = 0 m WBTL = 5 m WBT = 0 m NBLR = 20 m	EBT = 0.32 (A) 0 EBTR = 0.17 (A) 0 WBTL = 0.27 (A) 7 WBT = 0.34 (A) 0 NBLR = 0.38 (C) 23	EBT = 0 m EBTR = 0 m WBTL = 10 m WBT = 0 m NBLR = 15 m
Future Total 2041	EBT = 0.3 (A) 0 EBTR = 0.16 (A) 0 WBTL = 0.09 (A) 4 WBT = 0.21 (A) 0 NBLR = 0.52 (C) 19	EBT = 0 m EBTR = 0 m WBTL = 5 m WBT = 0 m NBLR = 25 m	EBT = 0.34 (A) 0 EBTR = 0.18 (A) 0 WBTL = 0.28 (A) 7 WBT = 0.38 (A) 0 NBLR = 0.43 (D) 26	EBT = 0 m EBTR = 0 m WBTL = 10 m WBT = 0 m NBLR = 15 m

Under all future total traffic conditions (2031, 2036, and 2041), the intersection of Old School Road and Street F is reported to operate satisfactorily with substantial reserve capacity, low levels of delay and negligible queueing during both peak hours.

9. Proposed Improvements

The proposed improvements along all study area roads is provided in the figure below, and includes the lane configuration at the study intersections as well as the intersections that have been proposed to be signalized.

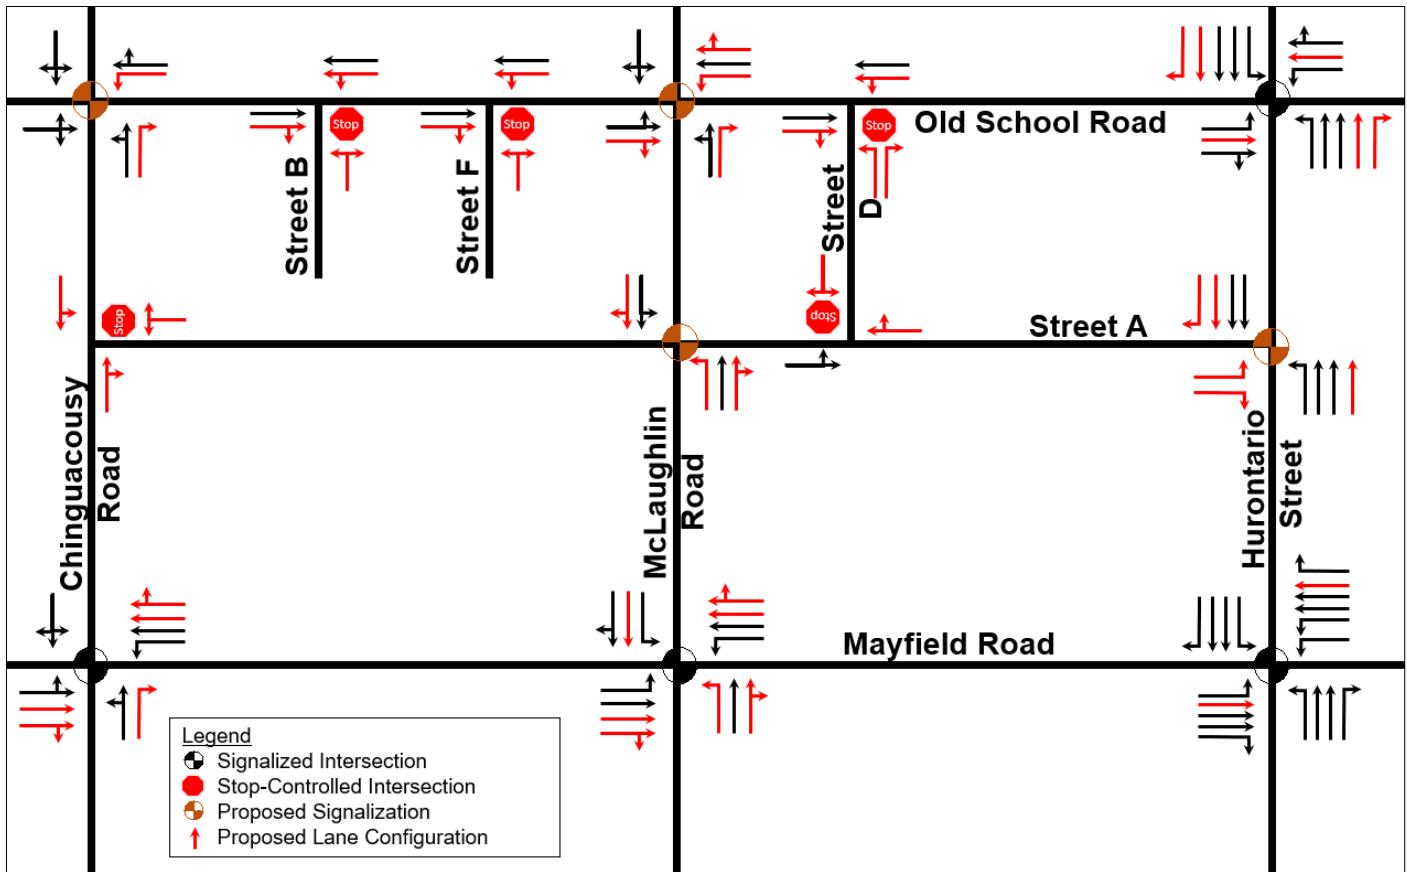

Figure 11 Proposed Lane Configurations and Intersection Traffic Control

9.1 Active Transportation Plan

An Active Transportation Plan was prepared for the proposed development and includes the proposed sidewalks within the development lands, the planned cycling routes, the recommended multi-use paths and trails, as well as potential cycling facilities within the proposed development.

Sidewalks are proposed to be provided along one side of the road throughout the development, consistent with the surrounding developments. The planned and recommended cycling infrastructure (cycling route, multi-use path, and multi-use trail) are consistent with the Town of Caledon's Active Transportation Master Plan Network Recommendations map.

The Active Transportation Plan map is provided in **Figure 45** and in **Appendix F**.

10. Parking

The minimum parking requirements are found in the Town of Caledon Zoning By-law, Section 5.2.2., Table 5.1 for the residential parking requirements and Section 5.2.3 Table 5.2 for the non-residential uses.

Although a site plan has not been finalized, parking will generally be provided for the residential and non-residential uses to satisfy the zoning by-law requirements.

11. Conclusion

The proposed land use plan prepared by Malone Given Parsons consists of a series of single-family homes, townhouses, commercial uses, and school blocks. The residential units, commercial retail space, and elementary school blocks are broken down as follows:

- 4,687 dwelling units
- 3 elementary schools (2 Peel District School Board Schools and 1 Dufferin Peel Catholic School Board School)
- 14 hectares of General Commercial lands

Access to the proposed lands from the regional arterial roads is proposed via a series of collector roads intersecting Chinguacousy Road, McLaughlin Road, Hurontario Street and Old School Road.

The proposed subdivision is expected to generate under Phase 1 in 2026 a total of 106 new two-way trips consisting of 26 inbound and 80 outbound trips during the weekday a.m. peak hour and 141 new two-way trips consisting of 89 inbound and 52 outbound trips during the weekday p.m. peak hour.

Under the 2029 horizon year, including Phases 1 through 4 built-out east of McLaughlin Road, the subdivision is expected to generate a total of 585 new two-way trips consisting of 142 inbound and 443 outbound trips during weekday a.m. peak hour and 724 new two-way trips consisting of 454 inbound and 270 outbound trips during the weekday p.m. peak hour.

Under the 2031 horizon year, with all phases of the subdivision built out (Phase 1 east of McLaughlin Road and Phase 2 west of McLaughlin Road), a total of 2,940 new two-way trips consisting of 911 inbound and 2,029 outbound trips during weekday a.m. peak hour and 3,809 new two-way trips consisting of 2,237 inbound and 1,571 outbound trips during the weekday p.m. peak hour.

To mitigate capacity issues along the study area roads, the following improvements have been recommended in previous studies and are assumed to be constructed in the latest analysis:

- Widening of Mayfield Road from 2 to 6 lanes (Chinguacousy Road to Hurontario Street), Region of Peel currently tendering the project
- Widening of Old School Road from 2 to 4 lanes (Chinguacousy Road to Hurontario Street), due to corridor growth and full build-out of the site in 2031
- Widening of McLaughlin from 2 to 4 lanes (Old School Road to Etobicoke Creek)
- Widening of Hurontario from 4 to 6 lanes (north of Highway 410), due to corridor growth in 2026
 - An auxiliary right-turn lane in the northbound and southbound directions.
- Signalization of the intersection of Old School Road & Chinguacousy Road, Old School Road & McLaughlin Road, McLaughlin & Street A, Hurontario Street & Street A

Despite the recommended road widening along Hurontario Street, capacity issues are still prevalent at intersections along Hurontario Street due to the high through volumes. The GTA West Corridor project proposes to extend Highway 410 to the proposed Highway 413 and would result in less through volume along Hurontario Street. Further studies will be required to evaluate the impact of the proposed Highway 410 extension on the Hurontario Street corridor within the study area.

#	Comment	Consultant	Response
Town of Caledon - Transportation Engineering, Public Works, & Transportation Department			
Kavleen S. Younan, Transportation Engineer			
February 9, 2024			
1.	<p>Town Transportation Staff are engaging with MTO staff in discussions on the proposed connection of Dougall Avenue to Hwy 10 at the Council's direction and the residents' request. Applicant to confirm the proposed roadway connections will not have negative impacts.</p> <p>a) Applicant to confirm that 'Street E' aligns with Dougall Avenue. The applicant should confirm the requirements to support this four-way intersection with the MTO.</p> <p>b) Applicant to confirm that 'Street H' meets MTO requirements such that the proposed Dougall Avenue connection to Highway 10 is not adversely impacted.</p> <p>c) Applicant to confirm the internal proposed intersections along Street E follow the MTO's requirements such that MTO approval for the future 4-way intersection with Highway 10 and Dougall Avenue is not adversely impacted.</p>	GHD	<p>As per the memorandum provided by the Town of Caledon's Transportation Engineering Public Works & Transportation Department, dated February 2024, Town Transportation Staff are engaging with MTO staff in discussions on the proposed connection of Dougall Avenue to Highway 10 at the Council's direction and the residents' request. Street A at Hurontario Street is proposed to line up with Dougall Avenue and as a result, GHD modeled the intersection of Street A at Hurontario as a single signalized intersection.</p> <p>The design of this road/intersection will be determined through the draft plan of the subdivision process, but initial analysis confirms the preliminary designs can meet MTO requirements.</p>
2.	Applicant to identify a defined internal collector road transportation network to accommodate all modes of transportation. This includes internal traffic controls and an active transportation network (along collector roadways, policies only on local roadways at this stage).	GHD	The collector road network and traffic controls are identified in the Traffic Impact Study and on the schedules to the OPA.
3.	<p>Applicant to provide a proposed Active Transportation Circulation Plan within the Transportation Study that includes the following items:</p> <p>a) Boundary Connections: Please develop a map that identifies all existing and planned pedestrian, cycling, trail, and community facilities (including current development applications) within the vicinity of the site (including along the boundary of the site) and demonstrate how the site will be connected to them through active transportation.</p> <p>b) Internal Circulation: The facilities roadway map should also include the proposed circulation for pedestrians, cyclists, and trails on the site, in accordance with the draft Active Transportation Master Plan:</p> <ul style="list-style-type: none"> i. Cycling Facilities: The applicant should identify the location of all cycling facilities within road ROW's. Facility selection should be in accordance with the draft ATMP, MMTMP, and OTM Book 18. ii. Trails: The applicant should identify all trails. Facility locations should be in accordance with the network recommendations of the draft ATMP. iii. Pedestrian Walkways & Crossings: The applicant must identify all pedestrian walkways and proposed crossings. iv. Additional Items: Any additional proposed pedestrian, cycling, and trail facilities or amenities should be identified in the Pedestrian and Cyclist Circulation Plan. 	GHD GHD GHD	The active transportation plan is provided in the Traffic Impact Study.
Technical Comments: Transportation Study			
4.	Section 1.1-For greater accuracy, the existing study horizon year and the full built-out horizon year should be updated to reflect the current date and proposed unit counts.	GHD	The horizon years have been updated.

#	Comment	Consultant	Response
5.	<p>Section 3.4– At the time of the study completion, pre-Covid TMCs were preferred by the Town. However, considering the evolving traffic congestion concerns within this area and the many changes since the pre-Covid TMCs, the Town requests the applicant to collect new traffic data which will address the following concerns:</p> <ul style="list-style-type: none"> i. Connection of Queen Mary Drive to the boundary road network ii. The majority of the unaccounted-for development in Brampton (to be confirmed by the applicant in consultation with the City of Brampton) iii. The unconstructed units in Mayfield West 1 Stage 1 and 2 (approximately a quarter of the proposed development was unconstructed in 2018) 	GHD	Traffic turning movement counts were collected in February 2024, and baseline traffic volumes for 2024 are provided in the Traffic Impact Study.
6.	Section 4.2 - Please confirm the findings of the Chinguacousy Road EA impact the findings of this report. Specifically, please confirm when the signalization of Old School Road and Chinguacousy Road is warranted.	GHD	Confirmed.
7.	Section 4.4 - Background Developments	GHD	
8.	<ul style="list-style-type: none"> i. Confirm with the City of Brampton if any background developments should be included. 	GHD	GHD reviewed the City's development application portal and did not identify any additional background developments to include from the City of Brampton.
9.	<ul style="list-style-type: none"> ii. Please confirm whether the GTA West Corridor project's impact on the projected volumes of the background developments for Mayfield West 2 Stages 1 and 2 was considered when establishing the background volumes. 	GHD	The background developments that provided site trips with and without the GTA West Corridor project were included in the TIS to establish future background volumes with and without the proposed highway.
10.	Clarify whether, based on the forecasted traffic volumes, the already proposed improvements on existing roadways (Chinguacousy Road and McLaughlin Road) with the Mayfield West 2 Stages 1 and 2 collectors roads (i.e. Tim Manley Avenue, Tweedhill Avenue, etc.) accommodate the additional traffic anticipated from Stage 3?	GHD	The intersections of Chinguacousy Road and McLaughlin Road with Tim Manley Avenue, Tweedhill Avenue were not included as study intersections and cannot confirm if the Stage 3 lands would impact the operation of the intersections.
11.	Section 5.1 – Please confirm whether the proposed school trips have been included in the application or revise the information if necessary.	GHD	The updated trip generation included school trips, however it is anticipated that most students will live within the subject lands and would result in most trips generated by the school being diverted trips from the residential component. As a result, GHD assumed that the school would generate 20% of the trips estimated by the ITE trip generation.
12.	<p>Section 5.2</p> <ul style="list-style-type: none"> i. Prior studies for Mayfield West Stage 2 proposed different trip distributions for commercial and residential trips. In contrast, this study seems to have used the same distribution model for all types of generators. It is suggested that the rationale behind this decision be discussed and justified. ii. Town Transportation Engineering Staff recommend basing trip distributions on Caledon TTS data. Applicant should review 2006 GTA west zones and make necessary revisions. 	GHD	<ul style="list-style-type: none"> i. The trip distribution was based on the TTS data without specifying the type of trip being completed (i.e. home, school, work, leisure) and thus provided an overall trip distribution for all uses on the subject lands. ii. GHD used zones adjacent to the subject site that were built at the time of the 2016 TTS data collection to establish a trip distribution for trips to and from an area near the subject site rather than the entire Town of Caledon.

#	Comment	Consultant	Response
13.	Section 6: Queuing reports appear to be missing for the unsignalized intersections in existing and future background conditions, as there are cases where the v/c ratio exceeds 1, and the operations are failing, yet no queue was reported. Applicant should review where the queues were stated to be 0 meters and revise as required.	GHD	Queuing reports were updated to review any queuing reported as 0 metres.
14.	<p>General:</p> <ul style="list-style-type: none"> i. Applicant to summarize Transportation Demand Management measures, initiatives, and Parking policies to achieve the Town's future goals. ii. Applicant to reference Pedestrian and Cyclist Circulation plan. <p>Applicant to identify other transportation infrastructure improvements and missing links for all modes of transportation required above and beyond those identified in the Region and Town Transportation Master Plans and construction programs to connect the proposed development to the existing active transportation facilities.</p> <p>iii. Applicant to confirm that the proposed collector roads are supportable by the relevant jurisdictions, including but not limited to corner clearance and anticipated sight distance. Corner clearances, as specified in TAC, are met for collector roadways within the Town's jurisdiction; for Roadways within the Regions and MTO Jurisdiction, please take note of the Peel Road Characterization study and the MTO Corridor Management Manual, respectively. Should justification be required, ideally, information would be included in the Transportation Study.</p>	GHD	Noted. TDM measures will be confirmed at the draft plan submission as will the detailed review of the collector roads once the road network has been further defined.
Advisory Comments: Transportation Study			
15.	Section 2.1 - Applicant should consult with the MTO regarding, but not limited to, the interchange with Highway 10 and Spine Road.	GHD	Noted. MTO was circulated the Terms of Reference.
16.	Section 3.4 – Traffic Volumes were not balanced; it would be preferred to discuss this in Methodology.	GHD	Traffic volumes at each intersection were based on their respective peak hours, providing traffic volumes for the “worst-case” scenarios. Volumes were not balanced in order to maintain the peak hour volumes.
17.	Section 3.2, Section 3.3 and Figure 3 - These sections differ from existing conditions. Should the report require revisions for other reasons, these sections should be updated to reflect current conditions.	GHD	Noted.
18.	Section 3.3 - Please be advised that a Go Transit route runs north-south on Highway 10.	GHD	The GO Transit bus route was added.
19.	Section 4.3 Separated figures for background growth volumes in the appendix would assist the review.	GHD	Background growth volumes have been appended.
20.	Section 5.2 - It would be preferred for the applicant to discuss the logic and impacts of the trip assignment with the GTA west corridor. It is noted that approximately the same traffic was assigned to Chinguacousy Road with the GTA west corridor despite the proposed interchange.	GHD	The trip distribution assumptions with the GTA West were based on the applicant's preferred location of the GTA West Highway interchange at Hurontario Street.
21.	<p>Appendix</p> <ul style="list-style-type: none"> i. Synchro taper lengths appear to be 2.5 meters. ii. Please note that the signal timings in the Mayfield West 2 Stage 2 report may differ from the current signal timings, particularly regarding the All Red and Yellow Times, which may not be relevant based on the posted speed limit. It is recommended that the applicant confirms the signal timings with the Region of Peel and MTO for intersections within their respective jurisdictions. 	GHD	<ul style="list-style-type: none"> i. Taper lengths were updated to the appropriate lengths ii. The signal timings were based on the field observations conducted at each study intersection based on existing conditions.
22.	Draft Official Plan Amendment: Town Transportation Staff recommend adding site-specific policies with the below considerations		

#	Comment	Consultant	Response
23.	<p>a) Section 7.14.5.1.4; consideration should be given to add prohibitions to restrict residential accesses onto arterial and collector roadways to improve safety.</p> <p>b) Section 7.14.4.3.9</p> <ul style="list-style-type: none"> i. The applicant should consider the transition from railway to trail and modify this section. It is imperative that the project aligns with the community's current needs and contributes to the area's overall development. ii. Was any consideration given to how the proposed development would impact future crossing treatment requirements of the proposed trailway? <p>c) Section 7.14.15.4.2; while Town Transportation will work to support transit, Staff may request the applicant provide a high-level route(S).</p>	GHD	C) if staff requested a high level route for transit, GHD can provide at the Draft Plan submission stage.

Planning and Development			
Transportation Planning			
24.	Schedule F-1 shows that the Conceptual GTA West (GTAW) Corridor and Transitway Corridor bisects the subject lands. Please note that the provided land use plan incorrectly shows the location of the GTAW corridor to the northwest of the subject lands, which should be rectified.	MGP/GHD	The final alignment of the Highway has not been determined. As per submissions and ongoing discussions with the Highway 413 project team, a review of the final alignment and our comments dating back 6 years is being undertaken, where we have recommended the highway be in the SR-2 alignment to the north. This is reflected on the proposed OPA schedules. Nevertheless, we have included a policy, and at the request of staff an alternative land use plan, to allow development to proceed based on the current alignment being considered by the Highway 413 team.
25.	<ul style="list-style-type: none"> • Portions of the subject lands as shown on the Conceptual Development Plan are within the Focused Analysis Area (FAA 2020) land protection boundary for the Highway 413 project. Lands within the FAA are being protected as they may be directly impacted by the Highway 413 transportation corridor, ancillary uses, or if refinements are made to the route during the preliminary design stage. 	MGP/GHD	Noted.
26.	<ul style="list-style-type: none"> • The application will need to be circulated to the Ministry of Transportation and Ministry of Energy for review and input. 	MGP/GHD	Noted.
27.	<ul style="list-style-type: none"> • Consistent wording and policies set out as per 5.6.20.14.21.1 of the Region Official Plan regarding the GTA West Preliminary Route Planning Study Area will need to be included in the Secondary Plan policies. 	MGP/GHD	Noted.
28.	The Region's 2019 Long Range Transportation Plan does not anticipate the road widenings identified in the Traffic Impact Study (authored by GHD) dated July 2022, it only forecasts widening Mayfield Road between Chinguacousy Rd and Hurontario St from 2 lanes to 4 lanes. Furthermore, an ongoing Transportation Master Plan is being developed to contribute insights for potential regional road enhancements in Caledon as part of the growth scenario analysis.	GHD	Noted. GHD reviewed all planned, proposed, and studied roadway improvements to provided consistency in what roadway improvements would be required to accommodate the subject lands.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
- Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
- Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
- Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
- Queue shown is maximum after two cycles.

Reduced v/c Ratio	0.31	1.27	0.40	0.48	1.15

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
- Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
- Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
- Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
- Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
- Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
- Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
- Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
- Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
- Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
- Queue shown is maximum after two cycles.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
