**RE: CERTIFICATION OF SITE PLAN ENGINEERING WORKS
7904 MAYFIELD ROAD
SPA #15-30**

Dear Jay,

We have performed a site visit upon completion of the works at the above project and previously certified the project in November 2018. Additionally, we visited site in August 2020, and though the Owner has made some minor modifications to the site, we still find it to be in general conformance to the approved drawings.

Crozier & Associates Representative has performed site reviews of the lot grading and site works associated with the above site and we do hereby certify:

1. The lot grading and servicing have been constructed in general conformity with the approved engineering plans, reports, and studies;
2. The storm drainage works including all sewers, drainage swales, overland flow routes and ponding areas have been installed in conformance with the approved grading and servicing plan(s) and are operational;

The following was further noted:

- There are three vegetated topsoil piles that remain on site and it seems they will be utilized in the future as part of the facility's operation.
- A portion of the swale along the North side of the noise berm (roughly 30 meters) is not yet sodded, however no signs of erosion or sediment were present during the site visit.
- The pond on site has been filled in. This pond was existing and does not affect the stormwater management of the proposed site.

Should you have any questions or require any further information, please call.

Sincerely,
C.F. CROZIER & ASSOCIATES INC.
