

LEGEND

Tree Inventory
Refer to Table 1 of report dated 25 October 2016, revised 18 March 2019.
Trees greater than 15cm DBH on and within ten metres of the proposed development were included in the inventory.

Tree Removals
The removal of Trees 336-338 is required due to Emerald Ash Borer infestation. Required tree removals are indicated with RED labels.

Tree Preservation
The preservation of the existing woodlot will be possible with appropriate tree protection measures. Tree protection measures will have to be implemented prior to the construction phase (earth works). Required tree preservation fencing is indicated in MAGENTA. Refer to Tree Protection Plan Notes for preservation details.

TREE PROTECTION PLAN NOTES

Prior to site disturbance the owner must confirm that no migratory birds are making use of the woodlot. The owner must also confirm that no migratory bird nests will be impacted by the proposed work. It is the applicant's responsibility to discuss potential tree injury of trees on shared property lines with their neighbours. Should such trees be injured to the point of instability or death the applicant may be held responsible for removal and such issues would be dealt with in civil court or through negotiation. The applicant would be required to replace such trees to the satisfaction of the Town of Caledon.

TREE PROTECTION ZONE: No construction activity, including grade changes, surface treatments or excavations of any kind is permitted within the area identified on the Tree Protection Plan or Site Plan as a Tree Protection Zone (TPZ). No root cutting is permitted. No equipment is permitted within the TPZ. Grade changes are not permitted within established TPZ. The area(s) identified as a TPZ must remain undisturbed at all times.

TREE PROTECTION BARRIERS:
Tree protection barriers for trees situated on the City road allowance where visibility must be maintained can be 1.2m (4ft), high and consist of chain link, or orange plastic web snow fencing on a 2 x 4 wood frame. All supports and bracing used to secure the barrier should be located outside the TPZ. All supports and bracing should minimize damage to roots outside the TPZ. The barrier should be installed around trees to be protected using plywood and bracing to secure the barrier should be outside the TPZ. All such supports and bracing should minimize damage to roots outside the TPZ.

For City-owned Trees:
Prior to the commencement of any site activity the tree protection barriers specified on this plan must be installed and written notice provided to the Town of Caledon. Established tree protection zones must remain in effective condition until site activities including landscaping are complete. Written notice must be provided to the Town of Caledon prior to the removal of the tree protection barriers.

ARBORCULTURAL WORK:
Any roots or branches which extend beyond the TPZ indicated on this plan which require pruning must be done by a qualified arborist or other tree professional as approved by the Town of Caledon. All pruning must be done in accordance with the standards of the arboricultural standards. Roots located outside the TPZ that have received approval from the Town of Caledon to be pruned must first be exposed by hand digging or by using a low pressure hydro vac method. This will allow a proper pruning cut and minimize healing of the roots. The Arbor/tree professional related to carry out crown or root pruning must contact the Town of Caledon no less than 48 hours prior to conducting any specified work.
